INTRODUCCIÓN

Este trabajo está enfocado en la puesta en práctica de los conocimientos adquiridos en el diplomado de profundización cisco (Diseño e implementación de soluciones integradas LAN/WAN). Aplicado a dos escenarios, que requieren una solución desde el punto administrativo de redes.

Además de ser un reto para los futuros profesionales, al realizar una actividad propia del ámbito de las redes, a su vez generara experiencia en la creación de soluciones de este campo de las comunicaciones.

El uso del software Packet Tracer, permitirá la simulación de los equipos ciscos, donde se realizarán las diferentes configuraciones, direccionamientos, requeridos para implementar en los diferentes escenarios; además de permitir aplicar los diferentes protocolos que permitirán crear las soluciones a las demandas de los clientes en los dos casos propuestos.

1 DESARROLLO ESCENARIO 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá y Medellín, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Este escenario plantea el uso de RIP como protocolo de enrutamiento, considerando que se tendrán rutas por defecto redistribuidas; asimismo, habilitar el encapsulamiento PPP y su autenticación.

Los routers Bogota2 y medellin2 proporcionan el servicio DHCP a su propia red LAN y a los routers 3 de cada ciudad.

Debe configurar PPP en los enlaces hacia el ISP, con autenticación.

Debe habilitar NAT de sobrecarga en los routers Bogota1 y medellin1.

Desarrollo

Iniciamos creando la Topología de Red en Packet Tracer

Como trabajo inicial se debe realizar lo siguiente.

- Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).

Realizamos la configuración inicial de todos los equipos, donde se restablecen, crean contraseñas cifradas, asignan nombres y mensajes de inicio:

```
Router#erase startup-config
Router#reload
Router>enable
Router#config term
Router(config)#hostname MEDELLIN2
MEDELLIN2(config)#no ip domain-lookup
MEDELLIN2(config)#enable secret class
MEDELLIN2(config)#line con 0
MEDELLIN2(config-line)#password cisco
MEDELLIN2(config-line)#login
MEDELLIN2(config-line)#logging synchronous
MEDELLIN2(config-line)#exit
MEDELLIN2(config)#line vty 0 4
MEDELLIN2(config-line)#password cisco
MEDELLIN2(config-line)#login
MEDELLIN2(config-line)#logging synchronous
MEDELLIN2(config-line)#exit
MEDELLIN2(config)#banner motd #prohibido el acceso a personal no autorizado#
MEDELLIN2(config)#service password-encryption
```

La configuración anterior es igual en todos los routers, solo cambia el nombre de cada equipo.

A continuación, se configuran las diferentes interfaces de cada router, siguiendo los direccionamientos correspondientes a cada red y subred:

MEDELLIN1

```
MEDELLIN1(config)#int s0/0/0
MEDELLIN1(config-if)#ip address 172.29.6.2 255.255.255.252

- Realizar la conexión física de los equipos con base en la topología de red

Topología y Conexionado de los equipos.

1.1 Parte 1: Configuración del enrutamiento

a. Configurar el enrutamiento en la red usando el protocolo RIP versión 2, declare la red principal, desactive la sumarización automática.

Realizamos en cada router la siguiente programación, donde indicamos las redes que usaran el protocolo RIP V2 y la desactivación de la sumarización automática:

MEDELLIN1

```
MEDELLIN1#config term
Enter configuration commands, one per line. End with CNTL/Z.
MEDELLIN1(config)#router rip
MEDELLIN1(config-router)#version 2
MEDELLIN1(config-router)#network 172.29.6.0
MEDELLIN1(config-router)#network 172.29.6.8
MEDELLIN1(config-router)#network 172.29.6.12
MEDELLIN1(config-router)#network 209.17.220.0
MEDELLIN1(config-router)#no auto-summary
MEDELLIN1(config-router)#end
```

MEDELLIN2

```
MEDELLIN2(config)#router rip
MEDELLIN2(config-router)#version 2
MEDELLIN2(config-router)#network 172.29.4.0
MEDELLIN2(config-router)#network 172.29.6.0
MEDELLIN2(config-router)#network 172.29.6.4
MEDELLIN2(config-router)#no auto-summary
MEDELLIN2(config-router)#end
```

MEDELLIN3

```
MEDELLIN3(config)#router rip
MEDELLIN3(config-router)#version 2
MEDELLIN3(config-router)#network 172.29.4.128
MEDELLIN3(config-router)#network 172.29.6.4
MEDELLIN3(config-router)#network 172.29.6.8
MEDELLIN3(config-router)#network 172.29.6.12
MEDELLIN3(config-router)#no auto-summary
MEDELLIN3(config-router)#end
```

BOGOTA1

```
BOGOTA1(config)#router rip
BOGOTA1(config-router)#version 2
BOGOTA1(config-router)#network 209.17.220.4
BOGOTA1(config-router)#network 172.29.3.0
BOGOTA1(config-router)#network 172.29.3.4
BOGOTA1(config-router)#network 172.29.3.8
BOGOTA1(config-router)#no auto-summary
BOGOTA1(config-router)#end
```

BOGOTA2

```
BOGOTA2(config)#router rip
BOGOTA2(config-router)#version 2
BOGOTA2(config-router)#network 172.29.3.8
BOGOTA2(config-router)#network 172.29.1.0
BOGOTA2(config-router)#network 172.29.3.12
BOGOTA2(config-router)#no auto-summary
BOGOTA2(config-router)#end
```

BOGOTA3

```
BOGOTA3(config)#router rip
BOGOTA3(config-router)#version 2
BOGOTA3(config-router)#network 172.29.0.0
BOGOTA3(config-router)#network 172.29.3.12
BOGOTA3(config-router)#network 172.29.3.0
BOGOTA3(config-router)#network 172.29.3.4
BOGOTA3(config-router)#no auto-summary
BOGOTA3(config-router)#end
```

ISP

```
ISP(config)#router rip
ISP(config-router)#version 2
ISP(config-router)#network 209.17.220.0
ISP(config-router)#network 209.17.220.4
ISP(config-router)#no auto summary
ISP(config-router)#end
```

b. Los routers Bogota1 y Medellín1 deberán añadir a su configuración de enrutamiento una ruta por defecto hacia el ISP y, a su vez, redistribuirla dentro de las publicaciones de RIP.

Se programa en los Router iniciales de cada ciudad una ruta por defecto a el Router ISP, y se configura su distribución en las publicaciones RIP, así:

```
MEDELLIN1(config)#ip route 0.0.0.0 0.0.0.0 s0/1/0
MEDELLIN1(config)#router rip
MEDELLIN1(config-router)#version 2
MEDELLIN1(config-router)#default-information originate
```

```
BOGOTA1(config)#ip route 0.0.0.0 0.0.0.0 s0/0/0
BOGOTA1(config)#router rip
BOGOTA1(config-router)#version 2
BOGOTA1(config-router)#default-information originate
```

c. El router ISP deberá tener una ruta estática dirigida hacia cada red interna de Bogotá y Medellín para el caso se sumarizan las subredes de cada uno a /22.

Iniciamos sumarizando cada conjunto de Redes teniendo en cuenta que la máscara de red será /22, así:

MEDELLIN

172.29.4.0/25	-----	10101100.00011101.00000100.00000000
172.29.4.128/25	-----	10101100.00011101.00000100.10000000
172.29.6.0/30	-----	10101100.00011101.00000110.00000000
172.29.6.4/30	-----	10101100.00011101.00000110.00000100
172.29.6.8/30	-----	10101100.00011101.00000110.00001000
172.29.6.12/30	-----	10101100.00011101.00000110.00001100

		10101100.00011101.00000100.00000000

Entonces la red en decimal seria **172.29.8.0/22**

BOGOTA

172.29.3.0/30	-----	10101100.00011101.00000011.00000000
172.29.3.4/30	-----	10101100.00011101.00000011.00000100
172.29.3.8/30	-----	10101100.00011101.00000011.00001000
172.29.3.12/30	-----	10101100.00011101.00000011.00001100
172.29.0.0/24	-----	10101100.00011101.00000000.00000000
172.29.1.0/24	-----	10101100.00011101.00000001.00000000

10101100.00011101.00000000.00000000

Entonces la red en decimal seria **172.29.0.0/22**

Configuramos cada router con la ruta estática así:

Para la red Medellín:

```
ISP(config)#ip route 172.29.8.0 255.255.252.0 209.17.220.1
```

Para la red Bogotá:

```
ISP(config)#ip route 172.29.0.0 255.255.252.0 209.17.220.6
```

1.2 Parte 2: Tabla de Enrutamiento.

Tabla 1. Direccionamiento interfaces.

Dispositivo	Interfaz	Dirección IP	Máscara de subred	Gateway predeterminado
MEDELLIN 1	SERIAL0/0/0	172.29.6.2	255.255.255.252	
	SERIAL0/0/1	172.29.6.9	255.255.255.252

ISP	SERIAL0/0/0	209.17.220.2	255.255.255.252	
	SERIAL0/0/1	209.17.220.5	255.255.255.252	

a. Verificar la tabla de enrutamiento en cada uno de los routers para comprobar las redes y sus rutas. Usamos el comando SHOW IP ROUTE

b. Verificar el balanceo de carga que presentan los routers.
Como se puede ver en las tablas, el router realiza el balanceo de carga de forma automática en el caso de tener varias trayectorias al mismo destino.

c. Obsérvese en los routers Bogotá1 y Medellín1 cierta similitud por su ubicación, por tener dos enlaces de conexión hacia otro router, y por la ruta por defecto que manejan.

d. Los routers Medellín2 y Bogotá2 también presentan redes conectadas directamente y recibidas mediante RIP.

e. Las tablas de los routers restantes deben permitir visualizar rutas redundantes para el caso de la ruta por defecto.

f. El router ISP solo debe indicar sus rutas estáticas adicionales a las directamente conectadas.

Todos los anteriores puntos se pueden ver en las siguientes evidencias, donde se muestra el resultado del comando SHOW IP ROUTE en cada router:

```
[OK]
ISP#show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP

1.3 Parte 3: Deshabilitar la propagación del protocolo RIP.

a. Para no propagar las publicaciones por interfaces que no lo requieran se debe deshabilitar la propagación del protocolo RIP, en la siguiente tabla se indican las interfaces de cada router que no necesitan desactivación.

ROUTER	INTERFAZ
Bogota1	SERIAL0/0/1; SERIAL0/1/0; SERIAL0/1/1
Bogota2	SERIAL0/0/0; SERIAL0/0/1
Bogota3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
Medellín1	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/1
Medellín2	SERIAL0/0/0; SERIAL0/0/1
Medellín3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
ISP	No lo requiere

Para evitar propagar el protocolo RIP a interfaces innecesarias y optimizar los servicios, se desactiva en los router así:

```
MEDELLIN1(config-router)#passive-interface g0/0
```

```
MEDELLIN1(config-router)#passive-interface g0/1
```

```
MEDELLIN2(config-router)#passive-interface g0/0
```

```
MEDELLIN2(config-router)#passive-interface g0/1
```

```
MEDELLIN3(config-router)#passive-interface g0/0
```

```
MEDELLIN3(config-router)#passive-interface g0/1
```

```
MEDELLIN3(config-router)#passive-interface s0/1/1
```

```
BOGOTA1(config-router)#passive-interface g0/0
```

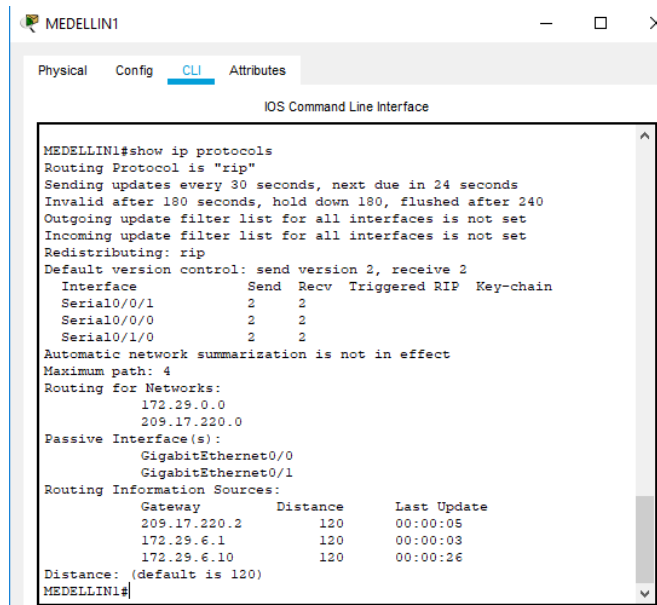

```
BOGOTA1(config-router)#passive-interface g0/1
```

```
BOGOTA2(config-router)#passive-interface g0/0  
BOGOTA2(config-router)#passive-interface g0/1  
BOGOTA3(config-router)#passive-interface g0/0  
BOGOTA3(config-router)#passive-interface g0/1  
BOGOTA3(config-router)#passive-interface s0/1/1
```

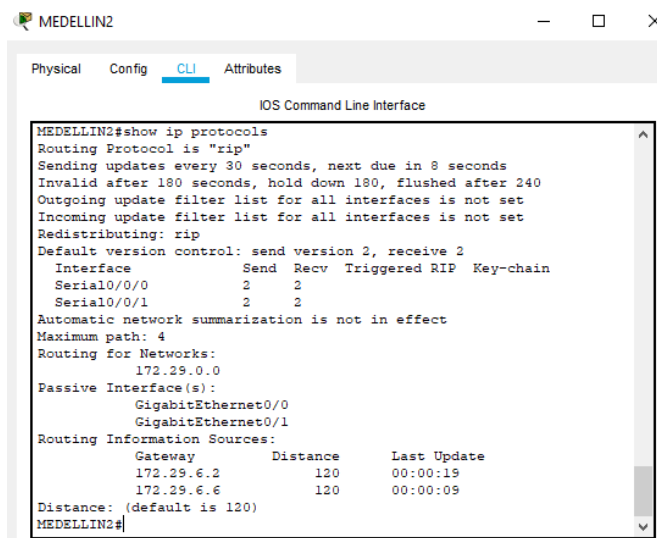

1.4 Parte 4: Verificación del protocolo RIP.

a. Verificar y documentar las opciones de enrutamiento configuradas en los routers, como el `passive interface` para la conexión hacia el ISP, la versión de RIP y las interfaces que participan de la publicación entre otros datos.

Se toma la información mediante el uso del comando `SHOW IP PROTOCOLS`

```
MEDELLIN1#show ip protocols
Routing Protocol is "rip"
Sending updates every 30 seconds, next due in 24 seconds
Invalid after 180 seconds, hold down 180, flushed after 240
Outgoing update filter list for all interfaces is not set
Incoming update filter list for all interfaces is not set

1.5 Parte 5: Configurar encapsulamiento y autenticación PPP.

a. Según la topología se requiere que el enlace Medellín1 con ISP sea configurado con autenticación PAT.

Se configura de la siguiente manera:

```
MEDELLIN1(config)#access-list 1 permit 172.29.4.0 0.0.7.255
MEDELLIN1(config)#ip nat inside source list 1 int s0/1/0 overload
MEDELLIN1(config)#int s0/0/0
MEDELLIN1(config-if)#ip nat inside
MEDELLIN1(config-if)#exit
MEDELLIN1(config)#int s0/0/1
MEDELLIN1(config-if)#ip nat inside
MEDELLIN1(config-if)#exit
MEDELLIN1(config)#int s0/1/1
MEDELLIN1(config-if)#ip nat inside
MEDELLIN1(config-if)#exit
MEDELLIN1(config)#int s0/1/0
MEDELLIN1(config-if)#ip nat outside
MEDELLIN1(config-if)#exit
MEDELLIN1(config)#
MEDELLIN1#debug ip nat
IP NAT debugging is on
```

b. El enlace Bogotá1 con ISP se debe configurar con autenticación CHAP.

Se configura de la siguiente manera:

```
BOGOTA1(config)#username ISP pass 1234
```

```
BOGOTA1(config)#int s0/0/0
```

```
BOGOTA1(config-if)#encapsulation ppp
```

```
BOGOTA1(config-if)#
```

```
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/0, changed state to down
```

```
BOGOTA1(config-if)#ppp authentication chap
```

```
BOGOTA1(config-if)#exit
```

```
BOGOTA1(config)#
```

```
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/0, changed state to up
```

```
BOGOTA1(config)#
```

```
ISP(config)#username BOGOTA1 pass 1234
```

```
ISP(config)#int s0/0/1
```

```
ISP(config-if)#encapsulation ppp
```

```
ISP(config-if)#ppp authentication chap
```

```
ISP(config-if)#exit
```

```
ISP(config)#
```

```
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/1, changed state to up
```

```
ISP(config)#
```

1.6 Parte 6: Configuración de PAT.

a. En la topología, si se activa NAT en cada equipo de salida (Bogotá1 y Medellín1), los routers internos de una ciudad no podrán llegar hasta los routers internos en el otro extremo, sólo existirá comunicación hasta los routers Bogotá1, ISP y Medellín1.

Se realiza la parametrización solicitada y se prueba realizando los respectivos ping's

```
BOGOTA1(config)#access-list 1 permit 172.29.0.0 0.0.7.255
BOGOTA1(config)#ip nat inside source list 1 int s0/0/0 overload
BOGOTA1(config)#int s0/0/0
BOGOTA1(config-if)#ip nat outside
BOGOTA1(config-if)#exit
BOGOTA1(config)#int s0/0/1
BOGOTA1(config-if)#ip nat inside
BOGOTA1(config-if)#exit
BOGOTA1(config)#int s0/1/0
BOGOTA1(config-if)#ip nat inside
BOGOTA1(config-if)#exit
BOGOTA1(config)#int s0/1/1
BOGOTA1(config-if)#ip nat inside
BOGOTA1(config-if)#exit
BOGOTA1(config)#end
BOGOTA1#
%SYS-5-CONFIG_I: Configured from console by console
BOGOTA1#debug ip nat
IP NAT debugging is on
BOGOTA1#
```

BOGOTA2#ping 209.17.220.1

Type escape sequence to abort.

Sending 5, 100-byte ICMP Echos to 209.17.220.1, timeout is 2 seconds:

!!!!

Success rate is 100 percent (5/5), round-trip min/avg/max = 4/6/10 ms

BOGOTA2#ping 172.29.6.1

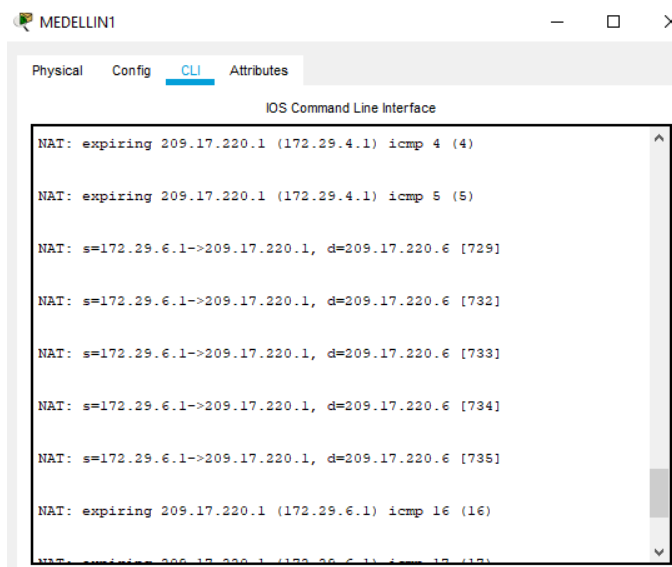

Type escape sequence to abort.

Sending 5, 100-byte ICMP Echos to 172.29.6.1, timeout is 2 seconds:

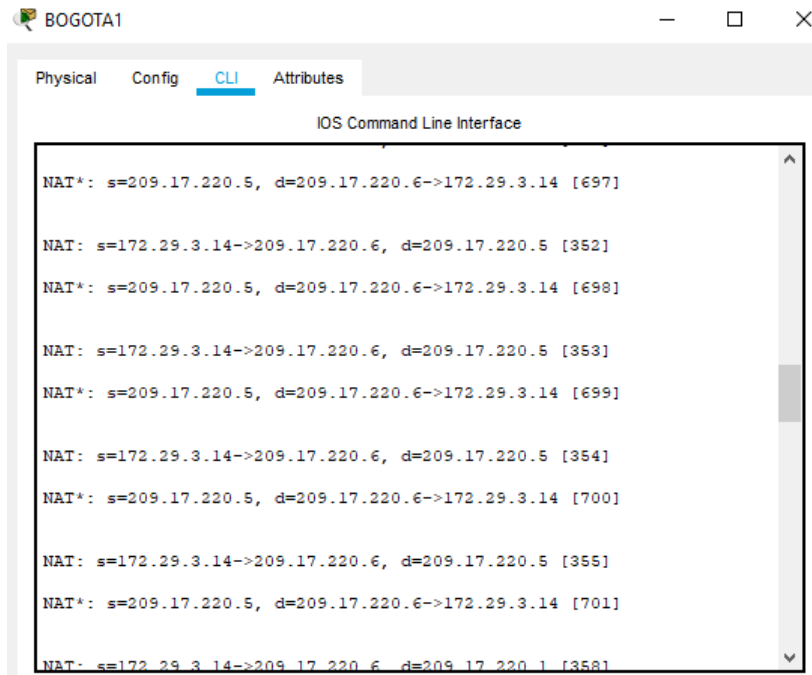

.....

Success rate is 0 percent (0/5)

b. Después de verificar lo indicado en el paso anterior proceda a configurar el NAT en el router Medellín1. Compruebe que la traducción de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la dirección debe ser traducida automáticamente a la dirección de la interfaz serial 0/1/0 del router Medellín1, cómo diferente puerto.

c. Proceda a configurar el NAT en el router Bogotá1. Compruebe que la traducción de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la dirección debe ser traducida automáticamente a la dirección de la interfaz serial 0/1/0 del router Bogotá1, cómo diferente puerto.

1.7 Parte 7: Configuración del servicio DHCP.

a. Configurar la red Medellín2 y Medellín3 donde el router Medellín 2 debe ser el servidor DHCP para ambas redes Lan.

```
MEDELLIN2(config)#ip dhcp pool MEDELLIN2
MEDELLIN2(dhcp-config)#default-router 172.29.4.2
MEDELLIN2(dhcp-config)#network 172.29.6.4 255.255.255.252
MEDELLIN2(dhcp-config)#exit
MEDELLIN2(config)#ip dhcp pool MEDELLIN3
MEDELLIN2(dhcp-config)#default-router 172.29.4.130
MEDELLIN2(dhcp-config)#network 172.29.4.0 255.255.255.128
MEDELLIN2(dhcp-config)#exit
MEDELLIN2(config)#
```

b. El router Medellín3 deberá habilitar el paso de los mensajes broadcast hacia la IP del router Medellín2.

```
MEDELLIN3(config)#int g0/0
MEDELLIN3(config-if)#ip helper-address 172.29.6.5
MEDELLIN3(config-if)#exit
```

c. Configurar la red Bogotá2 y Bogotá3 donde el router Bogota2 debe ser el servidor DHCP para ambas redes Lan.

```
BOGOTA2(config)#ip dhcp pool BOGOTA2
```

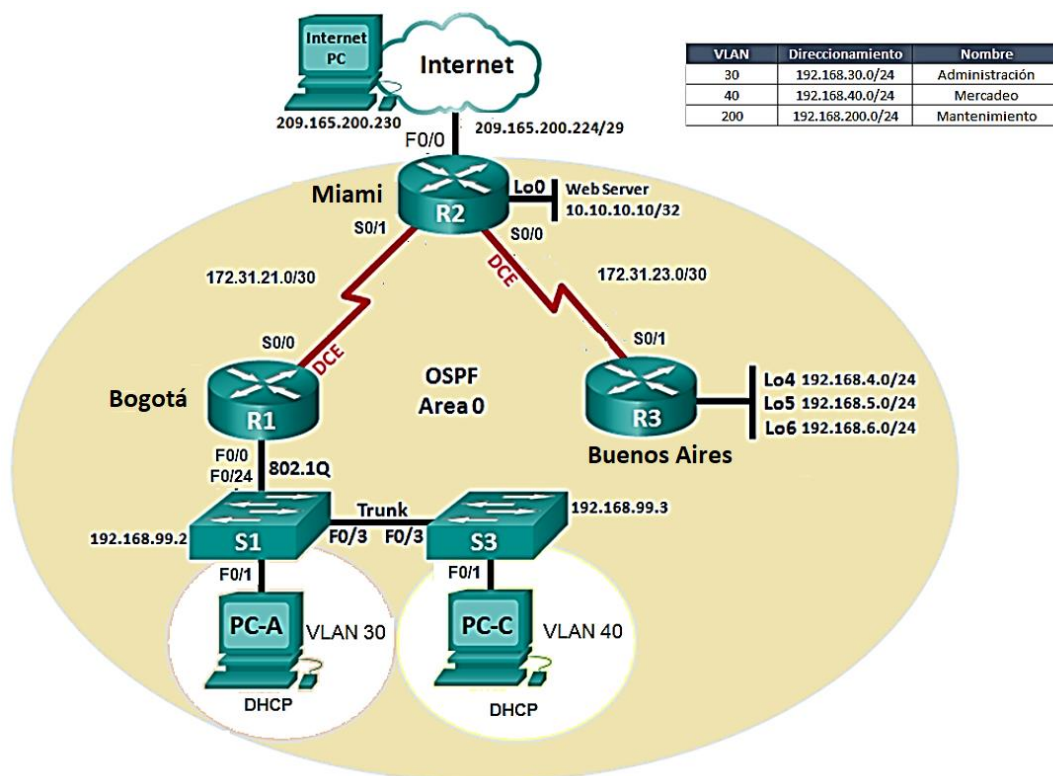

```
BOGOTA2(dhcp-config)#default-router 172.29.1.2
BOGOTA2(dhcp-config)#network 172.29.1.0 255.255.255.0
BOGOTA2(dhcp-config)#exit
BOGOTA2(config)#ip dhcp pool BOGOTA3
BOGOTA2(dhcp-config)#default-router 172.29.0.2
BOGOTA2(dhcp-config)#network 172.29.3.12 255.255.255.252
BOGOTA2(dhcp-config)#exit
```

d. Configure el router Bogotá3 para que habilite el paso de los mensajes Broadcast hacia la IP del router Bogotá2.

```
BOGOTA3(config)#int g0/0
BOGOTA3(config-if)#ip helper-address 172.29.3.14
BOGOTA3(config-if)#end
```

2. DESARROLLO ESCENARIO 2

Escenario: Una empresa de Tecnología posee tres sucursales distribuidas en las ciudades de Miami, Bogotá y Buenos Aires, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Dispositivo	Interfaz	Dirección IP	Máscara de subred	Gateway predeterminado
Miami	s0/0	172.31.23.1	225.255.255.252	
	s0/1	172.31.21.1	255.255.255.252	
	g0/1	10.10.10.10	255.255.255.255	
	g0/0	209.165.200.225	255.255.255.248	
Buenos Aires	s0/1	172.31.23.2	255.255.255.252	
	lo4	192.168.4.1	255.255.255.0	
	lo5	192.168.5.1	255.255.255.0	
	lo6	192.168.6.1	255.255.255.0	
Bogotá	g0/0	192.168.99.1	255.255.255.248	
	s0/0 DCE	172.31.21.2	255.255.255.252	
	vlan 200	192.168.99.3	255.255.255.0	
Internet PC		209.165.200.230	255.255.255.248	209.165.200.225
Administración	VLAN30	192.168.30.0/24	255.255.255.0	
Mercadeo	VLAN40	192.168.40.0/24	255.255.255.0	
Mantenimiento	VLAN200	192.168.200.0/24	255.255.255.0	

1. Configurar el direccionamiento IP acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario.

Debido a que los routers en Packet tracer no permiten el uso del comando “ip http server” se instala un servidor adicional a la topología.

```
Router#ip http server
```

```
^
```

```
% Invalid input detected at '^' marker.
```

Se realiza la configuración inicial de cada equipo, al igual que el direccionamiento de cada una de sus interfaces:

MIAMI

```

Router(config)#hostname MIAMI

- Visualizar lista resumida de interfaces por OSPF en donde se ilustre el costo de cada interface

The screenshot shows a terminal window titled "Miami" with tabs for "Physical", "Config", "CLI", and "Attributes". The "CLI" tab is active, displaying the "IOS Command Line Interface". The command entered is "MIAMI#show ip ospf interface". The output shows details for two interfaces: Serial0/0/0 and Serial0/0/1. Both are in Area 0 and have a network type of POINT-TO-POINT. Serial0/0/0 has a cost of 9500 and is adjacent to neighbor 8.8.8.8. Serial0/0/1 has a cost of 64 and is adjacent to neighbor 1.1.1.1. Both interfaces have a transmit delay of 1 second and suppress hello for 0 neighbors.

```
MIAMI#show ip ospf interface

3. Configurar VLANs, Puertos troncales, puertos de acceso, encapsulamiento, Inter-VLAN Routing y Seguridad en los Switches acorde a la topología de red establecida.
4. En el Switch 3 deshabilitar DNS lookup
5. Asignar direcciones IP a los Switches acorde a los lineamientos.
6. Desactivar todas las interfaces que no sean utilizadas en el esquema de red.

Nota: los anteriores incisos se realizaron en la configuración inicial de cada router, para no ser repetitivo se pueden evidenciar allá.

7. Implemente DHCP and NAT for IPv4
8. Configurar R1 como servidor DHCP para las VLANs 30 y 40.
9. Reservar las primeras 30 direcciones IP de las VLAN 30 y 40 para configuraciones estáticas.

10. Configurar NAT en R2 para permitir que los host puedan salir a internet

Configurar DHCP pool para VLAN 30	Name: ADMINISTRACION DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.
Configurar DHCP pool para VLAN 40	Name: MERCADEO DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.

Los ejercicios del 7 al 10 se resuelven en las siguientes configuraciones de cada router, buscando uniformidad en el informe y una presentación mas amigable al lector.

```
BOGOTA(config)#ip dhcp pool ADMINISTRACION
BOGOTA(dhcp-config)#domain-name ccna-unad.com
BOGOTA(dhcp-config)#default-router 192.168.30.1
^
% Invalid input detected at '^' marker.

CONCLUSIONES

Se logró crear las soluciones a los escenarios propuestos a desarrollar en este trabajo final, permitiendo el uso de Packet tracer para simular la topología de las redes; y así mismo configurar las diferentes interfaces y equipos, mediante los comandos y protocolos necesarios para construir la solución ingenieril.

Con el uso del protocolo RIP, se logró realizar un direccionamiento automático y fácil de aplicar; para después usar un enrutamiento estático de redes sumarizadas, evidenciando el balanceo de las redes, y como los routers eligen la mejor ruta para realizar las comunicaciones.

Fue necesario deshabilitar el protocolo Rip en las interfaces que no lo requerían, para lograr mejorar la eficiencia de los router; por otro lado, se realizó la configuración PPP, que nos permitió enviar por medio de ISP las direcciones privadas traducidas a direcciones públicas.

Aplicando las soluciones, se determinó que packet tracer no permite el uso de los comandos "ip http server", por lo que fue necesario usar un server como alternativa.

También fue un éxito lograr crear las VLAN's que permitieron realizar las comunicaciones mediante la misma red con varias subredes; permitiendo el uso del protocolo OSPF y DHCP.

En general fue una experiencia gratificante que permitió consolidar los conocimientos adquiridos durante el Diplomado de Cisco; permitiendo que el Profesional que está a punto de iniciar su etapa productiva, tenga una mejor visión del campo de las comunicaciones y las redes.
