2019**

EVALUACIÓN – PRUEBA DE HABILIDADES PRÁCTICAS CCNA

JOHNNATAN ERNESTO TRUJILLO CASTRO

**PRUEBA DE HABILIDADES PRÁCTICAS CCNA
PRESENTADA COMO REQUISITO PARA OPTAR AL TÍTULO DE:
INGENIERO DE SISTEMAS**

**PRESENTADO A:
JUAN CARLOS VESGA**

**LÍNEA DE INVESTIGACIÓN:
DIPLOMADO DE PROFUNDIZACIÓN CISCO (DISEÑO E IMPLEMENTACIÓN
DE SOLUCIONES INTEGRADAS LAN -WAN) (OPCIÓN DE GRADO)
GRUPO: 203092_2**

**UNIVERSIDAD NACIONAL ABIERTA Y A DISTANCIA - UNAD
ESCUELA DE CIENCIAS BÁSICAS, TECNOLOGÍA E INGENIERÍA
DE SISTEMAS**

**BOGOTÁ, COLOMBIA
2019**

Nota de aceptación

Presidente del jurado

Jurado

Jurado

Bogotá, julio de 2019

Dedicatoria

Dedico este trabajo a mi esposa, mis hijos quienes son mi motivación para lograr las metas que hemos trazado y así tener tranquilidad en todo ámbito, también a la UNAD y sus tutores quienes me acogieron y edificaron profesionalmente para lograr este título.

AGRADECIMIENTOS

Agradezco a mis compañeros y tutores de estudio los cuales aportaron de sus conocimientos para lograr entrega final de los trabajos, los cuales me enriquecieron mentalmente y profesionalmente, agradezco a mi familia que me apoyaron todo el tiempo con paciencia confianza.

1. INTRODUCCIÓN

La evaluación denominada “Prueba de habilidades prácticas”, busca identificar el grado de desarrollo de competencias y habilidades que fueron adquiridas a lo largo del diplomado. De tal manera que en el desarrollo del trabajo se aplicaran procesos de verificación de conectividad mediante el uso de comandos ping, traceroute, show ip route, entre otros. Los cuales darán solución a dos escenarios planteados los cuales plantean el uso de RIP como protocolo de enrutamiento, considerando que se tendrán rutas por defecto redistribuidas; asimismo, habilitar el encapsulamiento PPP y su autenticación.

Para cumplir los objetivos de comunicación, se emplean los routers y switches, que soportan una gran variedad de servicios de red, y que permiten a los usuarios conectarse a la misma. Es importante destacar que algunos de estos servicios pueden restringirse o desactivarse, lo que mejora la seguridad de la red, para que las operaciones que allí se realizan no se vean afectadas. Es importante destacar la parte de seguridad ya que hoy en día existen muchos administradores de red que no aplican los respectivos procedimientos de seguridad, que por lo general deberían ser una práctica común.

2. OBJETIVOS

2.1 OBJETIVO GENERAL

Desarrollar solución a los problemas de conectividad que poseen las empresas entre sus sucursales.

2.2 OBJETIVOS ESPECÍFICOS

Realizar rutinas de diagnóstico.

Realizar conexión física de los equipos con base a la topología de red.

Configurar topología de red de acuerdo a las especificaciones

3 DESARROLLO DE LOS ESCENARIOS

3.1 ESCENARIO 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá y Medellín, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

3.1.1 Topología de red.

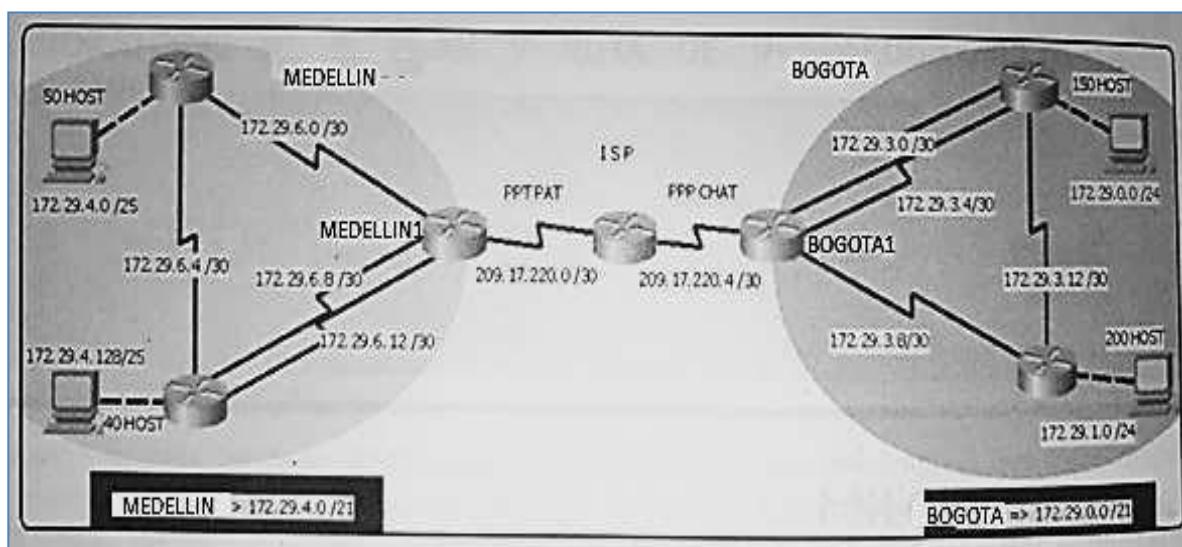

Ilustración 1 Topología 1

Este escenario plantea el uso de RIP como protocolo de enrutamiento, considerando que se tendrán rutas por defecto redistribuidas; asimismo, habilitar el encapsulamiento PPP y su autenticación.

Los routers Bogota2 y medellin2 proporcionan el servicio DHCP a su propia red LAN y a los routers 3 de cada ciudad.

Debe configurar PPP en los enlaces hacia el ISP, con autenticación.

Debe habilitar NAT de sobrecarga en los routers Bogota1 y medellin1.

3.1.2. Desarrollo

Como trabajo inicial se debe realizar lo siguiente.

- Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).
- Realizar la conexión física de los equipos con base en la topología de red

Configurar la topología de red, de acuerdo con las siguientes especificaciones.

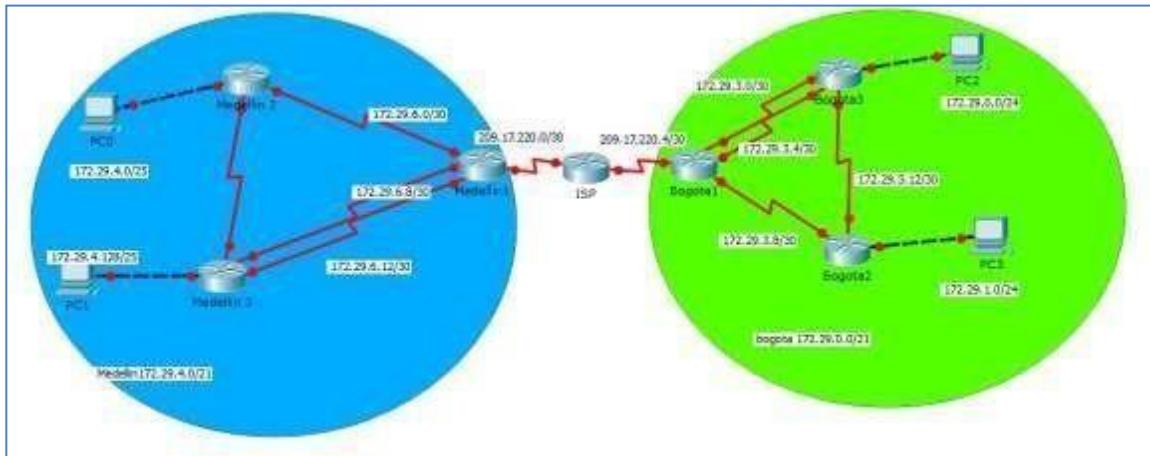

Ilustración 2 Topología 1.2

Se utilizaron routers cisco 1941 los cuales se le asignaron los modulos HWCI-2T para habilitar los puertos seriales, a los routers medellin3, medellin1, bogota1 y bogota 3 se le instalaron un modulo adicional HWCI-2T ya que la topología solicita habilitar un puerto serial adicional para la conexión.

3.1.3 Configuración de Routers

A cada router se le realiza la configuración inicial se asignaron contraseñas de inicio, de modo enable y de las líneas vty, se cambia el nombre del router y se asigna un mensaje en caso de no ingresar adecuadamente la contraseña, las contraseñas se encriptaron, se desactivaron la traducción de nombres a dirección del dispositivo y se asignan las direcciones ip y la máscara de red a cada puerto en este caso a los puerto serial 0/0/0 y 0/0/1 o los que sean necesarios para cada router.

Ilustración 7 show ip route Bogota2

El router ISP deberá tener una ruta estática dirigida hacia cada red interna de Bogotá y Medellín para el caso se sumarizan las subredes de cada uno a /22.

Se realiza la tabla con las direcciones ip con el fin de suamirzar y enconrar la ruta estatica adecuada, se cambia a binario para hacer la sumatoria.

3.1.5 Tabla de enrutamiento.

Verificar la tabla de enrutamiento en cada uno de los routers para comprobar las redes y sus rutas.

Se realiza los pings necesarios para verificar la conexión.

The screenshot shows a window titled "Bogota3" with tabs for "Physical", "Config", and "CLI". The "CLI" tab is selected, displaying the IOS Command Line Interface. The terminal window title is "IOS Command Line Interface". The output of the command "ping" is shown, indicating successful connectivity to three different IP addresses: 172.29.3.1, 209.17.220.5, and 209.17.220.2. The success rate for each ping is 100 percent (5/5), with round-trip times ranging from 6/7/9 ms to 9/1326/6585 ms.

```
%LINEPROTO-5-UPDOWN: Line protocol on interface Serial0/1/0, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/0, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/1, changed state to up

Bogota3>en
Bogota3#ping 172.29.3.1

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 172.29.3.1, timeout is 2 seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 6/7/9 ms

Bogota3#ping 209.17.220.5

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 209.17.220.5, timeout is 2 seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 7/10/15 ms

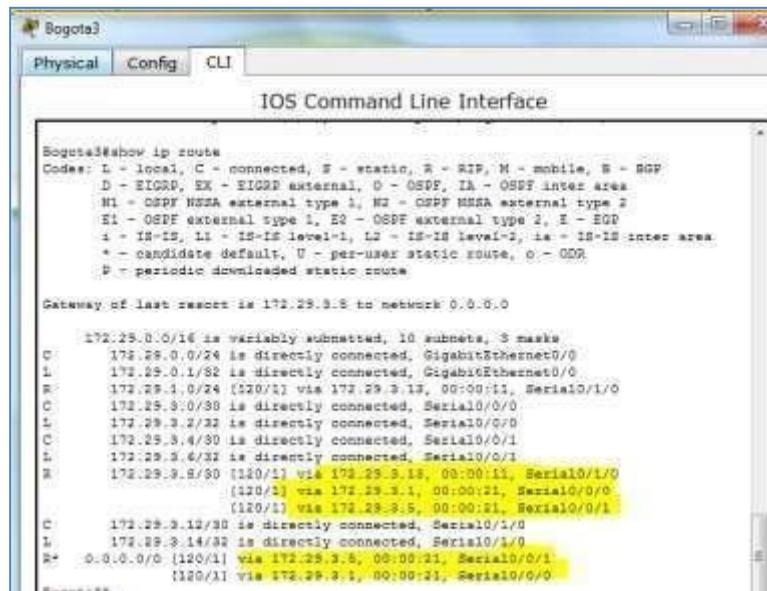

Bogota3#ping 209.17.220.2

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 209.17.220.2, timeout is 2 seconds:
.!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 9/1326/6585 ms

Bogota3#
```

Ilustración 8 ping bogota3

Verificar el balanceo de carga que presentan los routers utilizando el comando show ip route.

```

Ilustración 9 Balanceo Bogota3

- Obsérvese en los routers Bogotá1 y Medellín1 cierta similitud por su ubicación, por tener dos enlaces de conexión hacia otro router y por la ruta por defecto que manejan.
- Los routers Medellín2 y Bogotá2 también presentan redes conectadas directamente y recibidas mediante RIP.
- Las tablas de los routers restantes deben permitir visualizar rutas redundantes para el caso de la ruta por defecto.
- El router ISP solo debe indicar sus rutas estáticas adicionales a las directamente conectadas.

```
Router(config-if)#exit
Router(config)#ip route 172.29.4.0 255.255.252.0 209.17.220.2
Router(config)#ip route 172.29.0.0 255.255.252.0 209.17.220.6
Router(config)#
```

Ilustración 10 ip route

3.1.6 Deshabilitar la propagación del protocolo RIP.

Para no propagar las publicaciones por interfaces que no lo requieran se debe deshabilitar la propagación del protocolo RIP, en la siguiente tabla se indican las interfaces de cada router que no necesitan desactivación.

ROUTER	INTERFAZ
Bogota1	SERIAL0/0/1; SERIAL0/1/0; SERIAL0/1/1
Bogota2	SERIAL0/0/0; SERIAL0/0/1
Bogota3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
Medellín1	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/1
Medellín2	SERIAL0/0/0; SERIAL0/0/1
Medellín3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
ISP	No lo requiere

Tabla 3 Interfacez routers

En el paso 3.1.4 se realizó este proceso dejando las interfaces pasivas que no eran necesarias.

3.1.7 Verificación del protocolo RIP.

Verificar y documentar las opciones de enrutamiento configuradas en los routers, como el **passive interface** para la conexión hacia el ISP, la versión de RIP y las interfaces que participan de la publicación entre otros datos.

Verificamos utilizando el comando show ip protocols

Medellin 1

```
Medellin1>show ip protocols
Routing Protocol is "rip"
  Sending updates every 30 seconds, next due in 8 seconds
  Invalid after 180 seconds, hold down 180, flushed after 240

```

```

ISP#ping 209.17.220.6

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 209.17.220.6, timeout is 2 seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 5/6/7 ms

ISP#

```

Ilustración 24 ping ISP

3.1.9 Configuración de PAT.

En la topología, si se activa NAT en cada equipo de salida (Bogotá1 y Medellín1), los routers internos de una ciudad no podrán llegar hasta los routers internos en el otro extremo, sólo existirá comunicación hasta los routers Bogotá1, ISP y Medellín1.

```

Medellin1#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Medellin1(config)#ip nat inside source list 1 interface s0/0/0 overload
Medellin1(config)#access-list 1 permit 172.29.4.0 0.0.3.255
Medellin1(config)#int s0/0/0
Medellin1(config-if)#ip nat outside
Medellin1(config-if)#int s0/0/1
Medellin1(config-if)#ip nat inside
Medellin1(config-if)#int s0/1/0
Medellin1(config-if)#ip nat inside
Medellin1(config-if)#int s0/1/1
Medellin1(config-if)#ip nat inside
Medellin1(config-if)#
Medellin1#

```

```
Bogota1(config)#ip nat inside source list 1 int s0/0/0 overload
Bogota1(config)#access-list 1 permit 172.29.0.0 0.0.3.255
Bogota1(config)#int s0/0/0
Bogota1(config-if)#ip nat outside
Bogota1(config-if)#int s0/0/1
Bogota1(config-if)#ip nat inside
Bogota1(config-if)#int s0/1/0
Bogota1(config-if)#ip nat inside
Bogota1(config-if)#int s0/1/1
Bogota1(config-if)#ip nat inside
Bogota1(config-if)#

```

Después de verificar lo indicado en el paso anterior proceda a configurar el NAT en el router Medellín1. Compruebe que la traducción de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la dirección debe ser traducida automáticamente a la dirección de la interfaz serial 0/1/0 del router Medellín1, cómo diferente puerto.

```
PC>ping 209.17.220.5

Pinging 209.17.220.5 with 32 bytes of data:

Ilustración 26 IP nat translations.

Proceda a configurar el NAT en el router Bogotá1. Compruebe que la traducción de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la dirección debe ser traducida automáticamente a la dirección de la interfaz serial 0/1/0 del router Bogotá1, como diferente puerto.

3.1.10 Configuración del servicio DHCP.

Configurar la red Medellín2 y Medellín3 donde el router Medellín 2 debe ser el servidor DHCP para ambas redes Lan.

Medellin2

```
Medellin2>en
Medellin2#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Medellin2(config)#ip dhcp excluded-address 172.29.4.1 172.29.4.5
Medellin2(config)#ip dhcp excluded-address 172.29.4.129 172.29.4.133
Medellin2(config)#ip dhcp pool Medellin2
Medellin2(dhcp-config)#network 172.29.4.0 255.255.255.128
Medellin2(dhcp-config)#default-router 172.29.4.1
Medellin2(dhcp-config)#dns-server 8.8.8.8
Medellin2(dhcp-config)#exit
Medellin2(config)#ip dhcp pool Medellin3
Medellin2(dhcp-config)#network 172.29.4.128 255.255.255.128
Medellin2(dhcp-config)#default-router 172.29.4.129
Medellin2(dhcp-config)#dns-server 8.8.8.8
Medellin2(dhcp-config)#exit
Medellin2(config)#

```

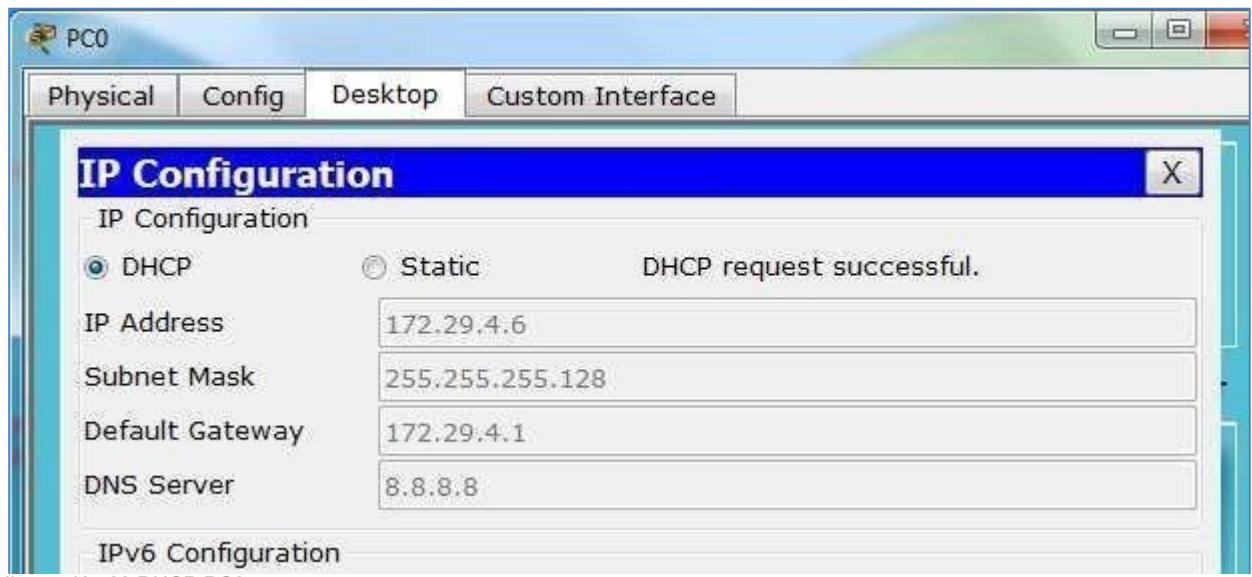

Ilustración 28 DHCP PC0

El router Medellín3 deberá habilitar el paso de los mensajes broadcast hacia la IP del router Medellín2.

Medellin 3

```
Medellin3(config)#int g0/0  
Medellin3(config-if)#ip helper-address 172.29.6.5  
Medellin3(config-if)#{/pre>
```

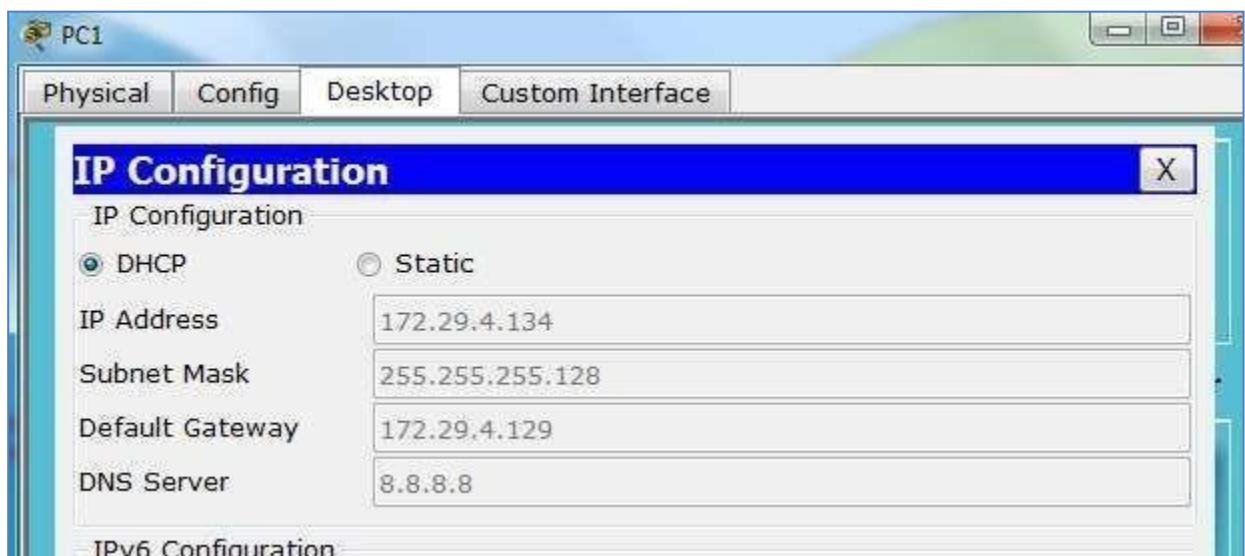

Ilustración 29 DHCP PC1

Configurar la red Bogotá2 y Bogotá3 donde el router Bogota 2 debe ser el servidor DHCP para ambas redes Lan.

```
Bogota2(config)#ip dhcp excluded-address 172.29.1.1 172.29.1.5
Bogota2(config)#ip dhcp excluded-address 172.29.0.1 172.29.0.5
Bogota2(config)#ip dhcp pool Bogota2
Bogota2(dhcp-config)#network 172.29.1.0 255.255.255.0
Bogota2(dhcp-config)#default-router 172.29.1.1
Bogota2(dhcp-config)#dns-server 8.8.8.8
Bogota2(dhcp-config)#ip dhcp pool Bogota3
Bogota2(dhcp-config)#network 172.29.0.0 255.255.255.0
Bogota2(dhcp-config)#default-router 172.29.0.1
Bogota2(dhcp-config)#dns-server 8.8.8.8
```

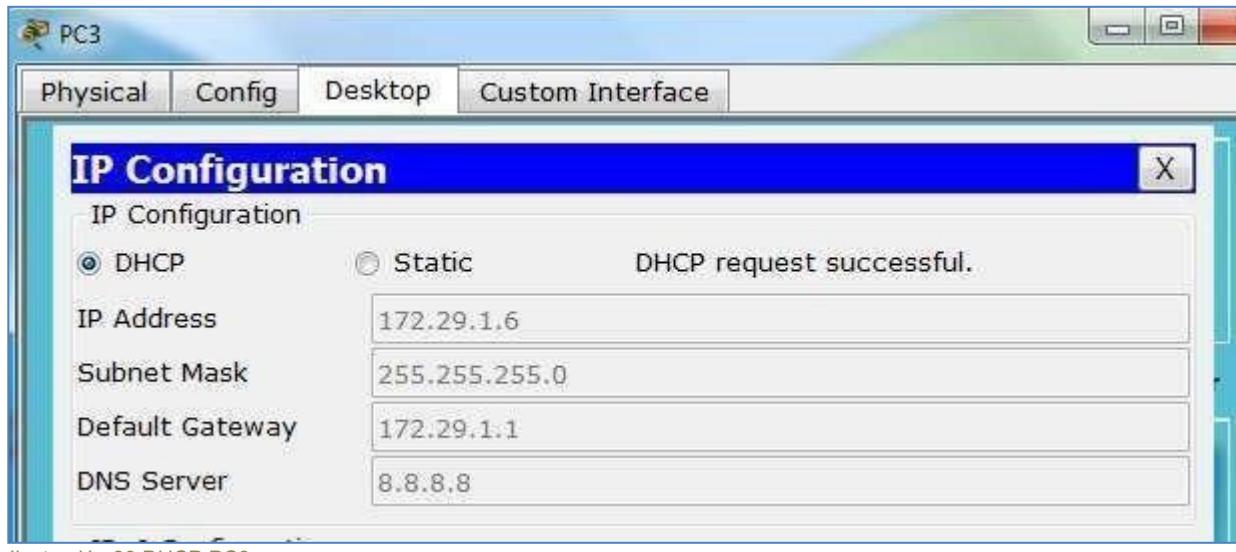

Ilustración 30 DHCP PC3

Configure el router Bogotá3 para que habilite el paso de los mensajes Broadcast hacia la IP del router Bogotá2.

```
Bogota3>en
Bogota3#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Bogota3(config)#int g0/0
Bogota3(config-if)#ip helper-address 172.29.3.13
Bogota3(config-if)#

```

Ilustración 31 DHCP PC2

3.2 ESCENARIO 2

Una empresa de Tecnología posee tres sucursales distribuidas en las ciudades de Miami, Bogotá y Buenos Aires, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

3.2.1 Topología.

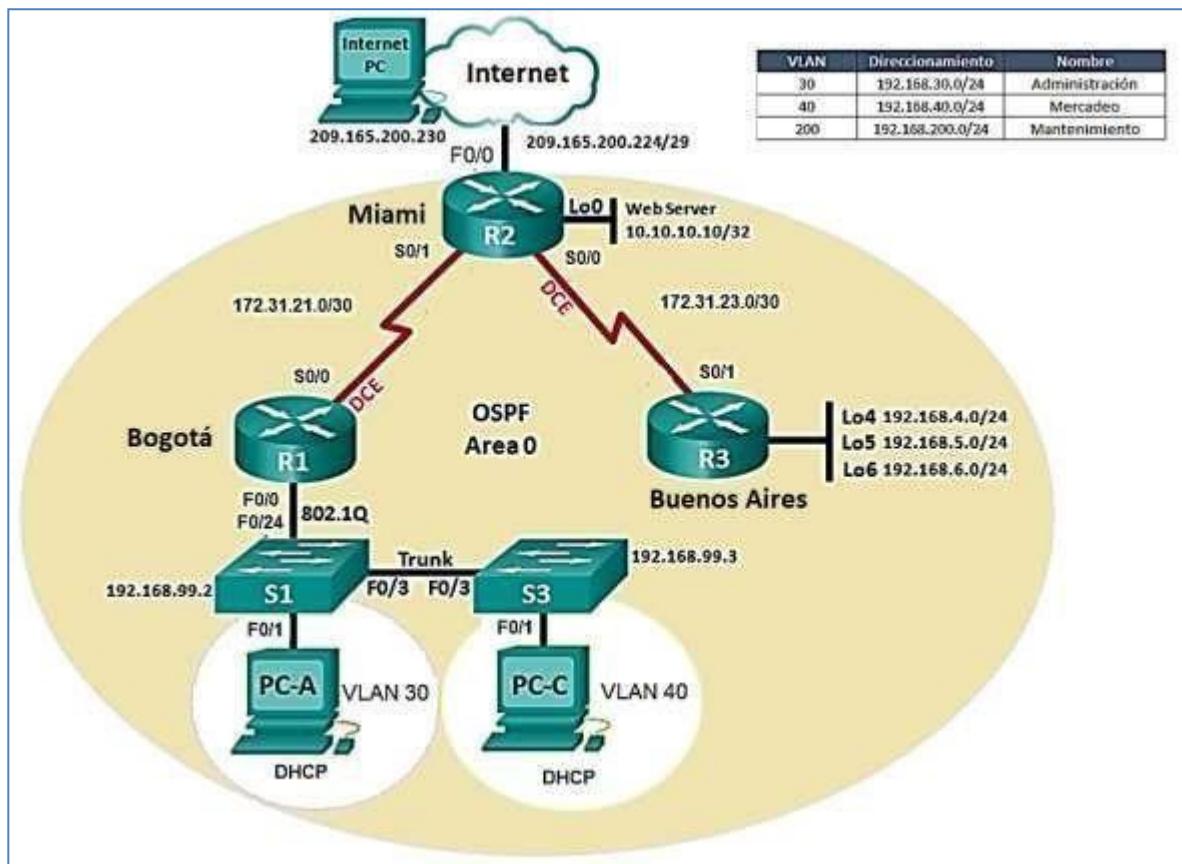

Ilustración 32 Topología escenario 2

3.2.2 Configuración direccionamiento IP.

Configurar el direccionamiento IP acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario

3.2.10 Implementar DHCP and NAT for IPv4

Para la implementación del DHCP y Nat se siguen los siguientes pasos.

Configurar DHCP pool para VLAN 30	Name: ADMINISTRACION DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.
Configurar DHCP pool para VLAN 40	Name: MERCADERO DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.

Tabla 5 DHCP VLAN

3.2.10.1 Configurar R1 como servidor DHCP para las VLANS 30 Y 40

```
Bogota>en
Bogota#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Bogota(config)#ip dhcp excluded-address 192.168.30.1
Bogota(config)#ip dhcp excluded-address 192.168.40.1
Bogota(config)#ip dhcp pool Administracion
Bogota(dhcp-config)#Network 192.168.30.0 255.255.255.0
Bogota(dhcp-config)#default-router 192.168.30.1
Bogota(dhcp-config)#dns-server 10.10.10.11
Bogota(dhcp-config)#ip domain-name ccna-unad.com
Bogota(config)#ip dhcp pool Mercadeo
Bogota(dhcp-config)#network 192.168.40.0 255.255.255.0
Bogota(dhcp-config)#default-router 192.168.40.1
Bogota(dhcp-config)#dns-server 10.10.10.11
Bogota(dhcp-config)#ip domain-name ccna-unad.com
Bogota(config)#

```

3.2.10.2 Reservar las primeras 30 direcciones IP de las VLANS 30 Y 40 para configuraciones estaticas.

```
Bogota(config)#ip dhcp excluded-address 192.168.30.1 192.168.30.30
Bogota(config)#ip dhcp excluded-address 192.168.40.1 192.168.40.30

```

3.2.10.3 Configurar Nat en R2 para permitir que los host puedan salir a Internet.

Miami

```
MIAMI>en
MIAMI#conf t
MIAMI(config)#ip nat pool ISP 209.165.200.225 209.165.200.228 netmask
255.255.255.248
MIAMI(config)#ip nat inside source list 1 pool ISP
MIAMI(config)#access-list 1 permit 192.168.30.0.0.0.255
MIAMI(config)#access-list 1 permit 192.168.40.0.0.0.255
MIAMI(config)#access-list 1 permit 192.168.4.0 0.0.3.255
MIAMI(config)#interface Loopback0
MIAMI(config-if)#ip nat inside
MIAMI(config-if)#INT f0/0

```

```
MIAMI(config-if)#ip nat outside  
MIAMI(config-if)#int s0/0/0  
MIAMI(config-if)#ip nat inside  
MIAMI(config-if)#int s0/0/1  
MIAMI(config-if)#ip nat inside
```

3.2.10.4 Configurar listas de acceso de tipo estandar para permitir o restringir trafico desde R1 o R3 hacia R2.

```
MIAMI>en  
MIAMI#conf t  
Enter configuration commands, one per line. End with CNTL/Z.  
MIAMI#access-list 1 permit 192.168.30.0 0.0.0.255  
MIAMI#access-list 1 permit 192.168.40.0 0.0.0.255  
MIAMI#ip nat pool ISP 209.165.200.225 209.165.200.228 netmask  
255.255.255.248  
MIAMI(config)#ip nat inside source list 1 pool ISP  
MIAMI(config)#ip access-list standar Administracion  
MIAMI(config-std-nacl)#permit host 172.31.21.1  
MIAMI(config-std-nacl)#exit  
MIAMI(config)#line vty 0 4  
MIAMI(config-line)#access-class Administracion in  
MIAMI(config-line)#
```

3.2.10.5 Configurar listas de acceso de tipo extendido para permitir o restringir trafico desde R1 o R3 hacia R2.

```
MIAMI(config)#access-list 101 permit tcp any host 209.165.200.229 eq www  
MIAMI(config)#access-list 101 permit icmp any any echo-reply  
MIAMI(config)#int f0/0  
MIAMI(config-if)#ip access-group 101 in  
MIAMI(config-if)#int s0/0/0  
MIAMI(config-if)#ip access-group 101 out  
MIAMI(config-if)#int s0/0/1  
MIAMI(config-if)#ip access-group 101 out  
MIAMI(config-if)#int f0/1  
MIAMI(config-if)#ip access-group 101 out  
MIAMI(config-if)#{
```

3.2.10.6 Verificación procesos de comunicación y redireccionamiento de tráfico en los routers mediante ping y traceroute.

Ilustración 55 Conectividad escenario 2

CONCLUSIONES

- Con la utilización del ping para el rastreo y así probar las rutas que se le asignan a las topologías
- Se maneja la configuración de los servidores web, de correo electrónico, de DHCP, de DNS y FTP
- Con Packet Tracer se configura y verifica el direccionamiento IPv4 e IPv6
- Con packet Tracer podemos simular la conexión de un cliente a un servidor como fueron las actividades de un servidor de juegos, permitiendo la conexión, el envío de archivos y envío de correo electrónico en un mismo servidor.
- La aplicación de los temas vistos en nuestra vida laboral y productiva nos puede abrir puertas a muchos proyectos.
- La herramienta Packet Tracer es de inmensa ayuda ya que nos permite enfrentarnos y solucionar problemas reales.
