INTRODUCION

La siguiente actividad es el desarrollo de una prueba de habilidades prácticas del diplomado de profundización en cisco con el cual demostramos los conocimientos adquiridos durante el desarrollo del curso, mostrando nuestras habilidades de manejo de packet tracer el cual es un software de mucha ayuda pues nos permite simular situaciones y entornos de red que nos permitirán saber cómo debemos hacer las configuraciones cuando nos encontramos en una situación real.

OBJETIVOS

General

- Realizar informe de la prueba de habilidades practicas del diplomado de cisco

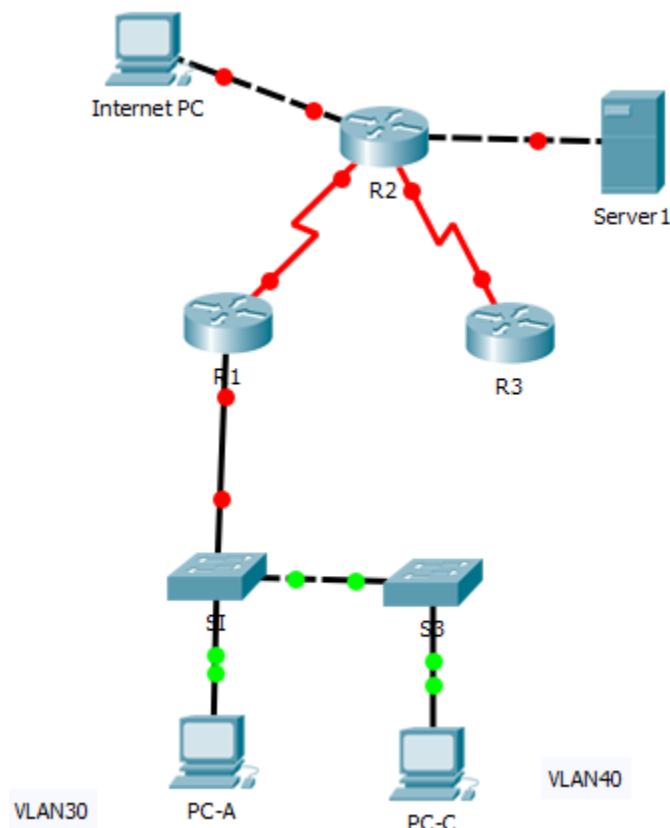

Específicos.

- Solucionar el ejercicio propuesto en la plataforma de cisco llamado prueba de habilidades practicas
- Demostrar los conocimiento adquiridos durante el desarrollo del diplomado de cisco

Prueba de Habilidades Prácticas

Escenario: Una empresa de Tecnología posee tres sucursales distribuidas en las ciudades de Bogotá, Medellín y Bucaramanga, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enruteamiento y demás aspectos que forman parte de la topología de red.

TOPOLOGIA DE LA RED

VLAN	Direccionamiento	Nombre
30	192.168.30.0/24	Administración
40	192.168.40.0/24	Mercadeo
200	192.168.200.0/24	Mantenimiento

1. Configurar el direccionamiento IP acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario.

1.1. Reseteo de dispositivos

Se realiza el reseteo de los 3 Router y también de los switch.

```
Router>enable
Router#erase startup-config
Erasing the nvram filesystem will remove all configuration files! Continue? [confirm]
[OK]
Erase of nvram: complete
%SYS-7-NV_BLOCK_INIT: Initialized the geometry of nvram
Router#reload
Proceed with reload? [confirm]
```

The screenshot shows a Cisco device configuration interface with the title bar "R3". Below it are tabs for "Physical", "Config", "CLI", and "Attributes", with "CLI" selected. The main area is titled "IOS Command Line Interface". It contains the following text:

```
Would you like to enter the initial configuration dialog? [yes/no]: no

Press RETURN to get started!

Router>enable
Router#erase startup-config
Erasing the nvram filesystem will remove all configuration files!
Continue? [confirm]
[OK]
Erase of nvram: complete
%SYS-7-NV_BLOCK_INIT: Initialized the geometry of nvram
Router#reload
Proceed with reload? [confirm]

The screenshot shows the Cisco Configuration Professional (CCP) application window titled "R3". The window has tabs for "Physical", "Config" (which is selected), "CLI", and "Attributes". The main area is titled "IOS Command Line Interface". The CLI session output is as follows:

```
Router>enable
Router#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname R3
R3(config)#int s0/0/1
