AGRADECIMIENTOS

Quiero agradecer primero a Dios por darme la vida y la sabiduría de llevar este maravilloso proceso de formación, a mi esposo por apoyarme en todo momento y alentarme a terminar mi carrera, a mi hijo por ser mi mayor motivación para poder terminar y cumplir mis sueños para poder darle una mejor calidad de vida y a mi madre porque ella ha sido mi mayor apoyo en todo el proceso de formación.

RESUMEN

En presente trabajo tiene como objetivo demostrar las habilidades prácticas adquiridas durante el transcurso del diplomado de profundización CCNA y a través de la cual se demuestran los niveles de comprensión y solución de problemas relacionados con diversos aspectos de configuración de redes Cisco. En la configuración de switches y routers, empleando configuraciones de topologías más utilizadas.

ABSTRACT

The objective of this paper is to demonstrate the practical skills acquired during the CCNA deepening course and through which the levels of understanding and solving problems related to various aspects of Cisco network configuration are demonstrated. In the configuration of switches and routers, using most used topology configurations.

INTRODUCCIÓN

La Universidad Nacional Abierta y a Distancia UNAD y CISCO Networking Academy mediante el diplomado Diseño e implementación de soluciones integradas LAN –WAN nos ayuda a reforzar conocimiento para crear redes LAN simples, realizar configuraciones básicas de routers y switches, implementar esquemas de direccionamiento IP, configurar routers y switches, resolver problemas de RIPv1, de RIPv2, de OSPF, de LAN virtuales y de routing entre VLAN en redes IPv4 e IPv6. Por medio de la prueba de habilidades prácticas y la herramienta de simulación Packet Tracer, desarrollada por CISCO para diseñar e implementar una red vamos a poner en práctica los temas vistos durante el desarrollo del curso de acuerdo a los protocolos y estándares vistos en cada actividad.

OBJETIVOS

Objetivo General

Identificar el grado de desarrollo de competencias y habilidades que fueron adquiridas a lo largo del diplomado. Poniendo en práctica los niveles de comprensión y solución de problemas relacionados con diversos aspectos de Networking.

Objetivos Específicos

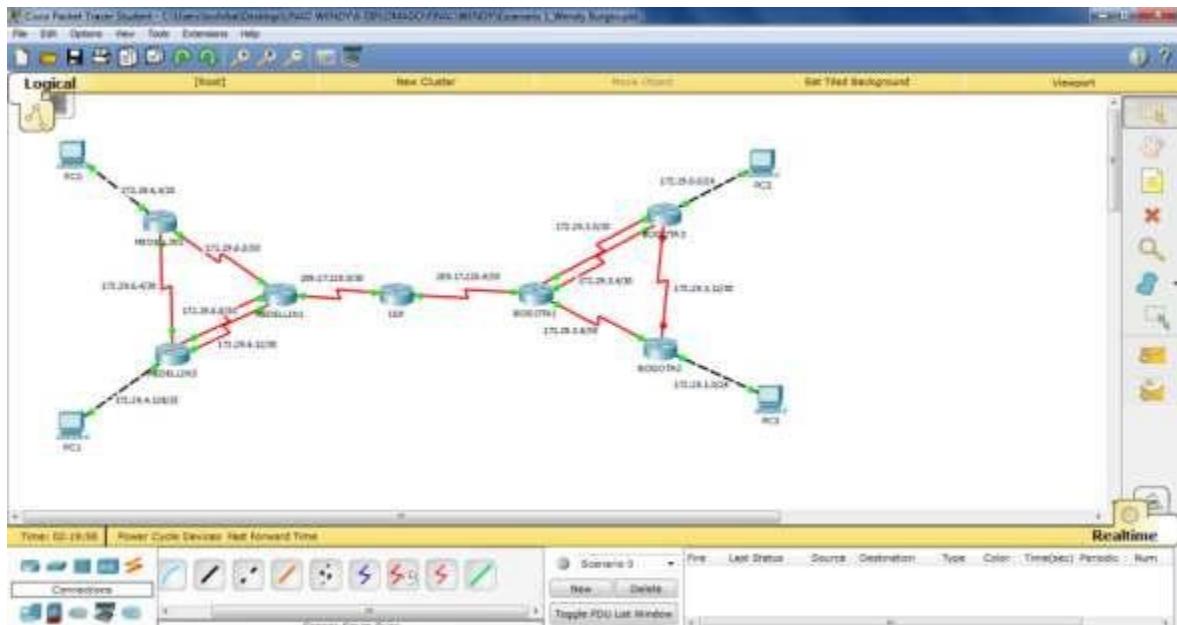

- ✓ Configurar el direccionamiento IP
- ✓ Configurar el protocolo de enrutamiento OSPFv2
- ✓ Verificar información de OSPF
- ✓ Configurar VLANs, puertos troncales, puertos de acceso, encapsulamiento, Inter-VLAN Routing y Seguridad en los Switches
- ✓ Deshabilitar DNS lookup
- ✓ Asignar direcciones IP a los Switches
- ✓ Implementar DHCP y NAT para IPv4
- ✓ Reservar direcciones IP
- ✓ Configurar NAT en un router
- ✓ Configurar listas de acceso de tipo estándar
- ✓ Verificar procesos de comunicación y re direccionamiento de tráfico en los routers

EVALUACIÓN – PRUEBA DE HABILIDADES PRÁCTICAS CCNA

Escenario 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá y Medellín, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Topología de Red

Este escenario plantea el uso de RIP como protocolo de enrutamiento, considerando que se tendrán rutas por defecto redistribuidas; asimismo, habilitar el encapsulamiento PPP y su autenticación.

Los routers Bogota2 y medellin2 proporcionan el servicio DHCP a su propia red LAN y a los routers 3 de cada ciudad.

Debe configurar PPP en los enlaces hacia el ISP, con autenticación.

Debe habilitar NAT de sobrecarga en los routers Bogota1 y medellin1.

Desarrollo

Como trabajo inicial se debe realizar lo siguiente.

Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).

Se establecen configuracion basicas a los terminales:

Configuraciones básicas

```
BOGOTA>enable
BOGOTA#conf term
Enter configuration commands, one per line. End with CNTL/Z.
BOGOTA(config)#no ip domain-lookup
BOGOTA(config)#service password-encryption
BOGOTA(config)#enable secret class
BOGOTA(config)#banner motd %Acceso no autorizado%
BOGOTA(config)#ip domain-name cisco.com
BOGOTA(config)#line console 0
BOGOTA(config-line)#password cisco
BOGOTA(config-line)#login
BOGOTA(config-line)#line vty 0 15
BOGOTA(config-line)#password cisco
BOGOTA(config-line)#login
```

Realizar la conexión fisica de los equipos con base en la topología de red:

Configuración del direccionamiento.

ISP

```
Router>enable
Router#conf ter
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#int s0/0/0
Router(config-if)#ip address 209.17.220.1 255.255.255.252
Router(config-if)#clock rate 4000000
Router(config-if)#no shutdown

%LINK-5-CHANGED: Interface Serial0/0/0, changed state to down
Router(config-if)#
Router(config-if)#int s0/0/1
Router(config-if)#ip address 209.17.220.5 255.255.255.252
Router(config-if)#clock rate 4000000
Router(config-if)#no shutdown

%LINK-5-CHANGED: Interface Serial0/0/1, changed state to down
Router(config-if)#

```

MEDELLIN 1

```
Router>enable

```

Configurar la topología de red, de acuerdo con las siguientes especificaciones.

Parte 1: Configuración del enrutamiento

a. Configurar el enrutamiento en la red usando el protocolo RIP versión 2, declare la red principal, desactive la sumarización automática.

Configuración del RIP

Debido a que el ISP está en internet RIP debe ser configurado en la zona de MEDELLIN y en la zona de BOGOTA, ya que se utilizará otro protocolo de enrutamiento dinámico o estático, este es diferente a lo que el administrador de MEDELLIN configura RIP independientemente y lo que el administrador de BOGOTA configura RIP aquí también de forma independiente, por lo tanto se empezará a configurar en MEDELLIN

MEDELLIN 1

```
Router>enable
Router#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#router rip
Router(config-router)#version 2
Router(config-router)#no auto-summary
Router(config-router)#do show ip route connected
C 172.29.6.0/30 is directly connected, Serial0/0/1
C 172.29.6.8/30 is directly connected, Serial0/1/0
C 172.29.6.12/30 is directly connected, Serial0/1/1
C 209.17.220.0/30 is directly connected, Serial0/0/0
Router(config-router)#network 172.29.6.0
Router(config-router)#network 172.29.6.8
Router(config-router)#network 172.29.6.12
Router(config-router)#passive-interface s0/0/0
Router(config-router)#

```

MEDELLIN 2

```
Router>enable
Router#conf term
Enter configuration commands, one per line. End with CNTL/Z.

Router(config-router)#network 172.29.1.0
Router(config-router)#network 172.29.3.8
Router(config-router)#network 172.29.3.12
Router(config-router)#passive-interface g0/0
Router(config-router)#{/pre}
```

BOGOTA 3

```
Router>enable
Router#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#router rip
Router(config-router)#version 2
Router(config-router)#no auto-summary
Router(config-router)#do show ip route connected
C 172.29.0.0/24 is directly connected, GigabitEthernet0/0
C 172.29.3.0/30 is directly connected, Serial0/0/0
C 172.29.3.4/30 is directly connected, Serial0/0/1
C 172.29.3.12/30 is directly connected, Serial0/1/0
Router(config-router)#network 172.29.0.0
Router(config-router)#network 172.29.3.0
Router(config-router)#network 172.29.3.4
Router(config-router)#network 172.29.3.12
Router(config-router)#passive-interface g0/0
Router(config-router)#{/pre}
```

Verificación de la Configuración.

b. Los routers Bogota1 y Medellín deberán añadir a su configuración de enrutamiento una ruta por defecto hacia el ISP y, a su vez, redistribuirla dentro de las publicaciones de RIP.

BOGOTA 1

```
Bogota-1>en
Bogota-1#conf t
Bogota-1(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.5
Bogota-1(config)#router rip
Bogota-1(config-router)#default-information originate
```

MEDELLIN 1

```
Medellin-1>en
Medellin-1#conf t
Medellin-1(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.1
Medellin-1(config)#route rip
Medellin-1(config-router)#default-information originate
```

En los routers Bogota1 y Medellín se añadio la configuracion de enrutamiento una ruta hacia el ISP y, a su vez, se distribuyo dentro de las publicaciones de RIP.

b. El router ISP deberá tener una ruta estática dirigida hacia cada red interna de Bogotá y Medellín para el caso se sumarizan las subredes de cada uno a /22.

ISP

```
ISP>en
ISP#conf t
ISP(config)#ip route 172.29.4.0 255.255.252.0 209.17.220.2
ISP(config)#ip route 172.29.0.0 255.255.252.0 209.17.220.6
```

MEDELLIN 1

```
Router>enable
Router#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.1
Router(config)#router rip
```

```
Router(config-router)#default-information originate
```

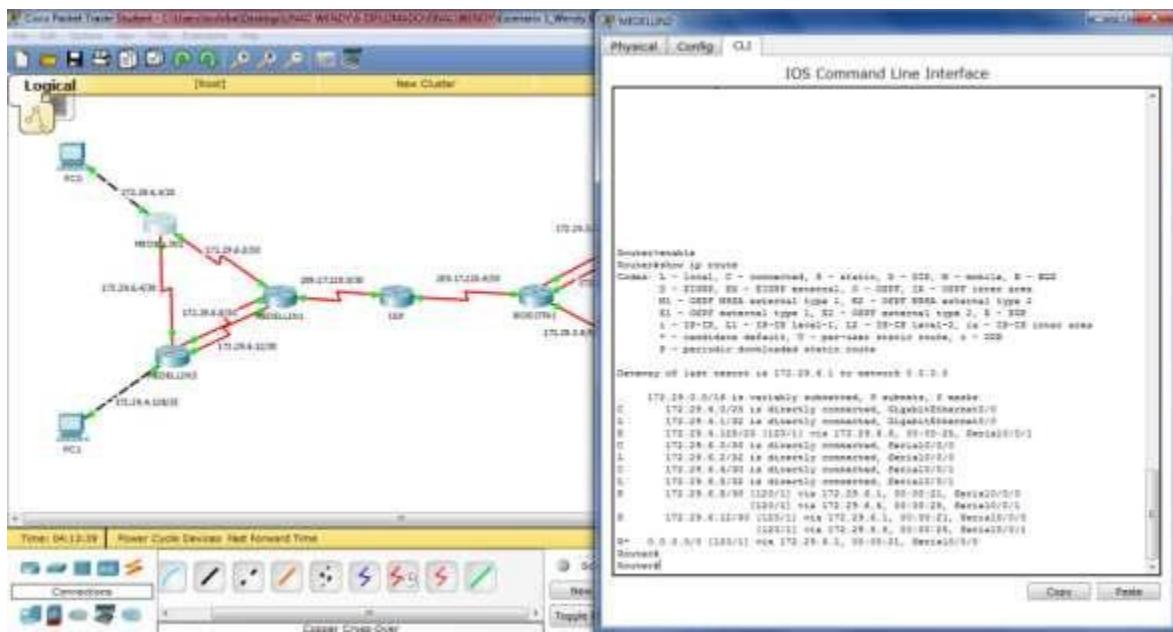

VERIFICACIÓN

MEDELLIN 2

```
Router>enable  
Router#show ip route  
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP

ESCENARIO 2

Una empresa de Tecnología posee tres sucursales distribuidas en las ciudades de Miami, Bogotá y Buenos Aires, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Topología de red

Configurar el direccionamiento IP acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario

CONCLUSIONES

En el desarrollo del trabajo se evidencia la importancia que juegan las telecomunicaciones en cualquier entorno, además de adquirimos conocimientos de redes en cada actividad planteada durante el curso “Network Fundamentals” donde comprendimos los conceptos básicos y el diseño e implementación de subredes y “Routing Protocols and Concepts” aprendiendo la configuración y solución de problemas de protocolos de enrutamiento obteniendo un crecimiento personal y profesional para así tener mejores oportunidades en el mundo de las telecomunicaciones.

Además logramos identificar el grado de desarrollo de competencias y habilidades que fueron adquiridas a lo largo del diplomado. Poniendo en práctica los niveles de comprensión y solución de problemas relacionados con diversos aspectos de Networking, aplicando la configuración el direccionamiento IP, configuración del protocolo de enrutamiento OSPFv2, realizando las verificaciones en la información de OSPF, configurando VLANs, puertos troncales, puertos de acceso, encapsulamientos, Inter-VLAN Routing y Seguridad en los Switches, comprendimos como deshabilitar DNS lookup, asignar direcciones IP a los Switches, Implementar DHCP y NAT para IPv4, reservar direcciones IP, configurar NAT en un router, configurar listas de acceso de tipo estándar y verificar procesos de comunicación y re direccionamiento de tráfico en los routers.
