INTRODUCCIÓN

En este documento representado como trabajo final del diplomado y bajo normas técnicas (ISO, 2015), mostrara el desarrollo de dos escenarios propuestos, en el que se plasmaran conocimientos adquiridos durante el curso y diplomado cisco, escenarios que buscan que el estudiante estimule conocimientos y su nivel de desarrollo frente a los diversos tipos de problemáticas en Networking (*No Title*, 2018)(Permendikbud, 2016).

Durante la realización de los escenarios propuestos encontramos desarrollo de seguridad, enrutamiento estático, asignación dinámica de IP, traducciones de direcciones mediante NAT. Se propicia un entorno para que el estudiante desarrolle en plenitud los puntos requeridos.

ESCENARIO 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá y Medellín, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Dispositivo	Interfaz	Direccionamiento	Mascara	Gateway predeterminado
Bogota1	Se0/1/0	209.17.220.6	255.255.255.252	
	Se0/0/1	172.29.3.9	255.255.255.252

Bogota_3(config-router)#network 172.29.1.0  
Bogota_3(config-router)#no auto-summary  
Bogota_3(config-router)#passive-interface gig0/0
```

b. Los routers Bogota1 y Medellin1 deberán añadir a su configuración de enrutamiento una ruta por defecto hacia el ISP y, a su vez, redistribuirla dentro de las publicaciones de RIP.

Medellin_1

```
Medellin_1(config)#  
Medellin_1(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.2  
Medellin_1(config)#  
Medellin_1(config)#router rip  
Medellin_1(config-router)#default-information originate  
Medellin_1 config-router)#exit
```

Bogota_1

```
Bogota_1(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.5  
Bogota_1(config)#  
Bogota_1(config)#router rip  
Bogota_1(config-router)#default-information originate  
Bogota_1(config-router)#exit  
Bogota_1(config)#exit  
Bogota_1#
```

c. El router ISP deberá tener una ruta estática dirigida hacia cada red interna de Bogotá y Medellín para el caso se sumarizan las subredes de cada uno a /22.

//El router asignado a Medellin 1 se conecta a Internet de igual manera el router asignado a Bogota 1

ISP

```
ISP(config)#ip route 172.29.0.0 255.255.252.0 209.17.220.6
```

```
ISP(config)#ip route 172.29.4.0 255.255.252.0 209.17.220.1
```

Parte 2: Tabla de Enrutamiento.

a. Verificar la tabla de enrutamiento en cada uno de los routers para comprobar las redes y sus rutas.

Bogota_2(dhcp-config)#dns-server 8.8.8.8
Bogota_2(dhcp-config)#exit
Bogota_2(config)#

```

- d. Configure el router Bogota1 para que habilite el paso de los mensajes Broadcast hacia la IP del router Bogota2.

```
Bogota_3(config)#inter gig0/0
Bogota_3(config-if)#ip helper-address 172.29.3.14
Bogota_3(config-if)#exit
Bogota_3(config)#

```

ESCENARIO 2

Una empresa de tecnología posee tres sucursales distribuidas en las ciudades de Miami, Bogotá y buenos aires, en donde el estudiante será el administrador de red el cual deberá configurar e interconectar entre si cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

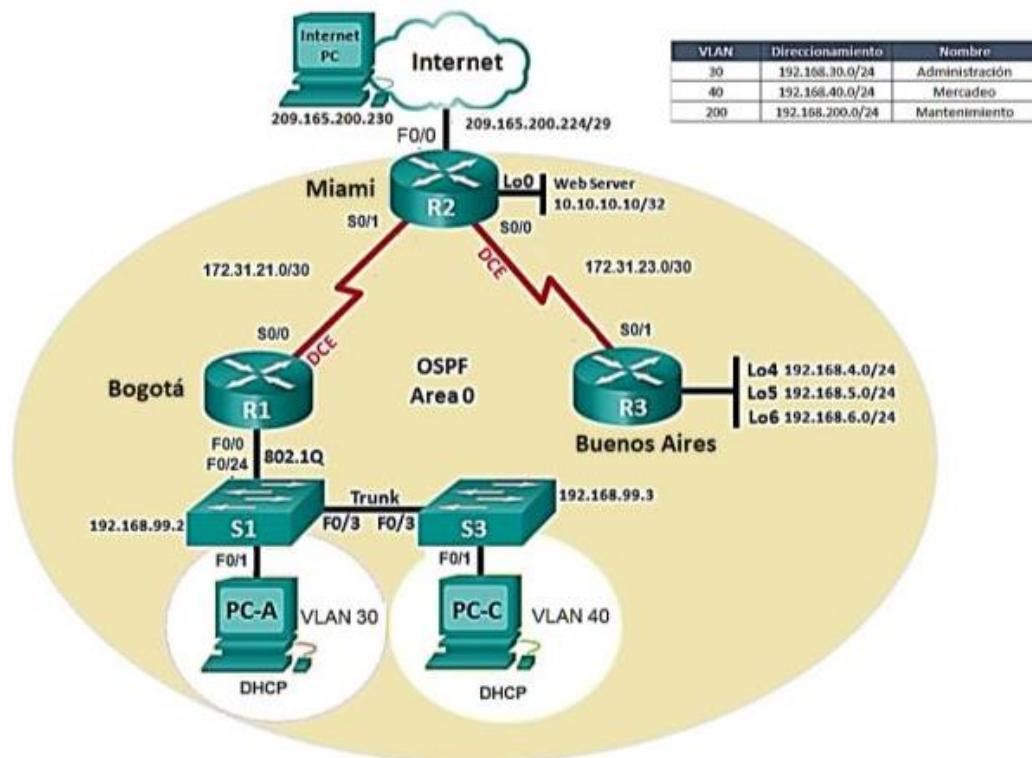

Ilustración 20. Topología de red Escenario 2

1. Configurar el direccionamiento IP acorde con la tecnología de red para cada uno de los dispositivos que forman parte del escenario

Lo primero que haremos antes de configurar el direccionamiento de la red será introducir comandos para establecer parámetros básicos en router y switch,

nombres, encriptación, mensaje del día. La contraseña de acceso en todos los casos será cisco.

Ilustración 34. Visualización protocolos Buenos Aires

3. Configurar VLAN's, puertos troncales, puertos de acceso, encapsulamiento, Inter-VLAN. routing y seguridad en los switches acorde a la topología establecida.

Nos basaremos en la tabla propuesta por la prueba de habilidades para el desarrollo de este punto

VLAN	Direccionamiento	Nombre
30	192.168.30.0/24	Administración
40	192.168.40.0/24	Mercadeo
200	192.168.200.0/24	Mantenimiento

Tabla 3. Datos de VLAN que propone ejercicio.

Debo recordar que seguí a pie de letra los datos obtenidos del gráfico, así que para la VLAN 200 utilice direcciones IP 192.168.99.2-192.168.99.3. De la misma manera Gateway 192.168.99.1 para los dos switch. Importante esta aclaración para no confundirnos en la socialización del ejercicio

Switch 1

```
S1#config t
Enter configuration commands, one per line. End with CNTL/Z.
S1(config)#vlan 30
S1(config-vlan)#name administracion
S1(config-vlan)#vlan 40
S1(config-vlan)#name administracion

BOGOTA(config-subif)#exit
BOGOTA(config)#int g0/0
BOGOTA(config-if)#no shutdown
```

4. En el switch 3 deshabilitar DNS lookup.

```
SW3#config t
Enter configuration commands, one per line.  End with CNTL/Z.
SW3#(config)no ip domain loo
SW3#(config)no ip domain lookup
SW3#
```

5. Asignar direcciones Ip a los switches acorde a los lineamientos.

En el punto numero tres se realizo la asignación de direccionamiento IP recordemos que la VLAN 200 siguió el direccionamiento indicado en la figura, 99.1 y 99.2

S1

```
S1(config-vlan)#int vlan 200
S1(config-if)#
%LINK-5-CHANGED: Interface Vlan200, changed state to up
S1(config-if)#ip address 192.168.99.2 255.255.255.0
S1(config-if)#no sh
S1(config-if)#exit
S1(config)#ip default gateway
^
% Invalid input detected at '^' marker.
S1(config)#ip default-gateway 192.168.99.1
```

Sw3

```
SW3(config-vlan)#int vlan 200
SW3(config-if)#
%LINK-5-CHANGED: Interface Vlan200, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Vlan200, changed state to
up
SW3(config-if)#ip address 192.168.99.3 255.255.255.0
SW3(config-if)#no sh
SW3(config-if)#exit
SW3(config)#ip default-gateway 192.168.99.1
```

6. Desactivas todas las interfaces que no sean utilizadas en la red.

Previamente en punto anterior se realizó la des habilitación de las interfaces que no serán utilizadas en la red.

Switch 1

```
S1(config-if)#interface range f0/2, f0/4-23, g0/1-
```

```
S1(config-if-range)#shutdown  
%LINK-5-CHANGED: Interface FastEthernet0/2, changed state to administratively  
down  
%LINK-5-CHANGED: Interface FastEthernet0/4, changed state to administratively  
down  
%LINK-5-CHANGED: Interface FastEthernet0/5, changed state to administratively  
down
```

Switch 3

```
SW3(config-if)#interface range f0/2, f0/4-24, g0/1-2  
SW3(config-if-range)#shutdown  
%LINK-5-CHANGED: Interface FastEthernet0/2, changed state to administratively  
down  
%LINK-5-CHANGED: Interface FastEthernet0/4, changed state to administratively

administratively down  
%LINK-5-CHANGED: Interface FastEthernet0/11, changed state to  
administratively down
```

7. Implementar DHCP y NAT para IpV4

Esta configuración se lleva a cabo realizando los dos puntos próximos.

8. Configurar R1 como servidor DHCP para las VLAN 30 y 40.

Mediante la configuración requerida en el punto 5, podemos realizar el punto exigido en este apartado del documento.

9. Reservar las primeras 30 direcciones IP de las VLAN 30 y 40 para configuraciones estáticas.

Configurar DHCP pool para VLAN 30	Name: ADMINISTRACION DNS-Server: 10.10.10.11 Domain-Name:ccna-unad.com Establecer default gateway
Configurar DHCP pool para VLAN 40	Name: MERCADERO DNS-Server: 10.10.10.11 Domain-Name:ccna-unad.com Establecer default gateway

```
BOGOTA(config)#ip dhcp excluded-address 192.168.30.1 192.168.30.30
```

```
BOGOTA(config)#ip dhcp excluded-address 192.168.40.1 192.168.40.30
```

```
BOGOTA(config)#ip dhcp pool administracion
```

```
BOGOTA(dhcp-config)#dns server 10.10.10.11
```

^

```
% Invalid input detected at '^' marker.
```

```
BOGOTA(dhcp-config)#dns-server 10.10.10.11
```

```
BOGOTA(dhcp-config)#domain-name ccna-unad.com
```

```
% Invalid input detected at '^' marker.
```

```
BOGOTA(dhcp-config)#default-router 192.168.30.1
```

BOGOTA(dhcp-config)#

```

Ilustración 35. DHCP en PC-A

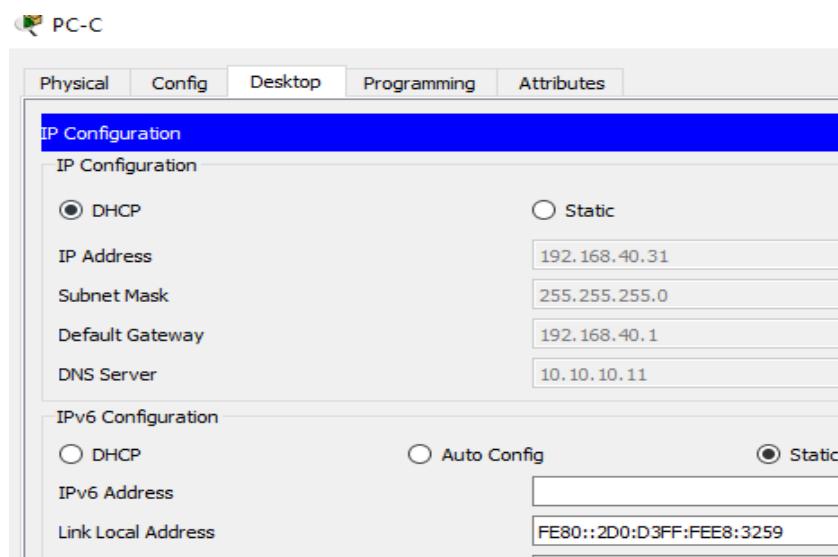

Ilustración 36. DHCP EN PC-C

10. Configurar NAT en R2 para permitir que los host puedan salir a internet

Se crea base local con 1 usuario en R2
nombre de usuario: webestudiante
clave : unad123
nivel de privilegio: 10

```
MIAMI(config)#user webestudiante privilege 10 secret unad123
MIAMI(config)#
MIAMI(config)#ip nat inside source static 10.10.10.10 209.165.200.229
MIAMI(config)#
MIAMI(config)#int g0/0
MIAMI(config-if)#ip nat outside
MIAMI(config-if)#int g0/1
MIAMI(config-if)#ip nat inside
MIAMI(config-if)#
MIAMI(config-if)#
MIAMI(config-if)#exit
MIAMI(config)#access-list 1 permit 192.168.30.0 0.0.0.255
MIAMI(config)#access-list 1 permit 192.168.40.0 0.0.0.255
MIAMI(config)#access-list 1 permit 192.168.4.0 0.0.3.255
MIAMI(config)#ip nat pool internet 209.165.200.225 209.165.200.228 netmask
255.255.255.0
MIAMI(config)#
MIAMI(config)#ip nat inside source list 1 pool internet
```

11. Configurar al menos dos listas de acceso tipo estándar a su criterio en para restringir o permitir trafico desde R1 o R3 hacia R2.

```
MIAMI(config)#ip access-list standard PERMITIR_TELNET_R1
MIAMI(config-std-nacl)#permit host 172.31.21.1
MIAMI(config-std-nacl)#exit
MIAMI(config)#line vty 0 4
MIAMI(config-line)#access-class PERMITIR_TELNET_R1 in
```

```
MIAMI(config-line)#
```

```
BOGOTA>en

```

```
Enter configuration commands, one per line. End with CNTL/Z.
```

```
MIAMI(config)#ip access-list standar mantenimiento
```

```
MIAMI(config-std-nacl)#permit 172.31.21.1 0.0.0.255
```

```
MIAMI(config-std-nacl)#exit
```

```
MIAMI(config)#line vty 0 4
```

```
MIAMI(config-line)#access-class mantenimiento in
```

```
MIAMI(config-line)#
```

12. Configurar al menos dos listas de acceso tipo extendido o nombradas a su criterio en para restringir o permitir trafico desde R1 o R2 hacia R3

```
MIAMI(config)#
```

```
MIAMI(config)#access-list 103 permit tcp any host 209.165.200.229 eq www
```

```
MIAMI(config)#
```

```
MIAMI(config)#access-list 103 permit icmp any any echo-reply
```

```
MIAMI#ping 209.165.200.230

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 209.165.200.230, timeout is 2
seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 0/3/9
ms

CONCLUSIONES

- Trabajamos herramientas de simulación que proveen y permiten ratificar escenarios LAN/WAN para realizar un análisis acorde a la situación sobre los diferentes protocolos y métricas trabajadas durante el curso.
- Se desarrolló actividades de representación de red, que incluía exploración y conexión de diferentes dispositivos.
- El protocolo de RIP, trabajado y documentado está dirigido para interconectar redes de una magnitud pequeña y podemos observar que OSPF para más grandes en tamaño.
- En los escenarios trabajados y simulaciones se desarrolla y aplica conceptos como DHCP y conmutación de la red.
- El protocolo OSPF es un protocolo de estado enlace que permite la multidifusión en un área con todos los routers.
- Se documentó mediante la digitación de comandos e ilustraciones el proceso desarrollado en cada escenario.
- Gracias a la información suministrada por tutores se despejaron dudas y se prestó un entorno más conforme para la realización del trabajo.
