INTRODUCCION

En el presente trabajo de habilidades se utilizara los protocolos de routing dinámico configuración de servers DHCP, Network Address Translation (NAT), Listas de Control de Acceso (ACL), también se configuran los servidores DHCP, protocolo de difusión que trabaja de forma predeterminada.

Es de mucha importancia la buena administración de las redes, y aplicarlas de la mejor manera para optimizar las comunicaciones, en nuestro caso en la aplicación de Packet Tracer.

OBJETIVOS

Se desarrollara las prácticas, mediante los dos casos propuestos como actividad final del curso diploma de Cisco.

Verificar las conexiones mediante el uso de comandos ping, traceroute, show ip route.

Desarrollar el informe con evidencias y pantallazos que especifique la aplicación y solución práctica solicitada en cada uno de los escenarios

Generar los archivos en el Packet Tracer al igual que el trabajo en formato pdf con lo solicitado.

Escenario 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá y Medellín, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

TOPOLOGIA DE RED

PARTE 1. CONFIGURACION DE ENRUTAMIENTO

ESCENARIO 2

Una empresa de Tecnología posee tres sucursales distribuidas en las ciudades de Miami, Bogotá y Buenos Aires, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

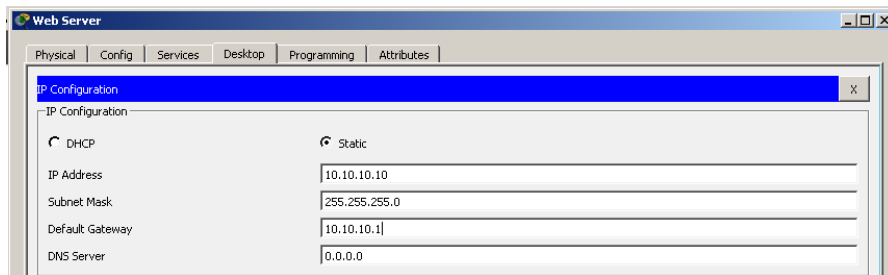

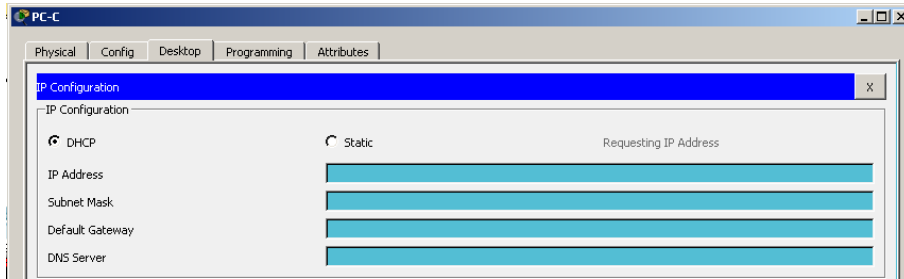

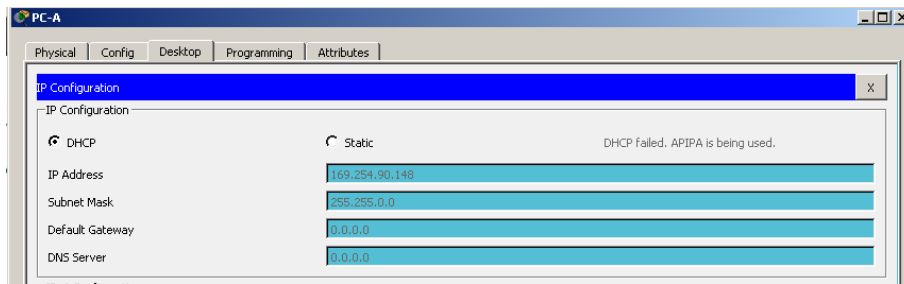

Desarrollo Del Ejercicio

1. Configurar el direccionamiento IP acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario

NOTA: Si inserta a la topología un servidor ya que el Router (R2) no soporta el servicio http.

Se procede a realizar la configuración IP de los PC

- Configurar el direccionamiento IP acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario

<pre> Enter configuration commands, one per Router(config)#no ip domain-lookup Router(config)#hostname R1 R1(config)#enable secret class R1(config)#line con 0 R1(config-line)#pass cisco R1(config-line)#login R1(config-line)#line vty 0 4 R1(config-line)#pass cisco R1(config-line)#login R1(config-line)#exit R1(config)#service password-encryption R1(config)#banner motd \$Prohibido el l R1(config)#int s0/0/0 R1(config-if)#ip add 172.31.21.1 255. ---	---

2. Configurar el protocolo de enrutamiento OSPFv2 bajo los siguientes criterios:

OSPFv2 area 0

Configuration Item or Task	Specification
Router ID R1	1.1.1.1
Router ID R2	5.5.5.5
Router ID R3	8.8.8.8
Configurar todas las interfaces LAN como pasivas	
Establecer el ancho de banda para enlaces seriales en	256 Kb/s
Ajustar el costo en la métrica de S0/0 a	9500

Verificar información de OSPF

Visualizar tablas de enrutamiento y routers conectados por OSPFv2

Visualizar lista resumida de interfaces por OSPF en donde se ilustre el costo de cada interface

Visualizar el OSPF Process ID, Router ID, Address summarizations, Routing Networks, and passive interfaces configuradas en cada router.

```

Enter configuration commands, one per line.
R1(config)#router ospf 1
R1(config-router)#router-id 1.1.1.1
R1(config-router)#network 172.31.21.0 0.0.0.0

R1(config-if)#

```

```

R2>enable
R2#config t
Enter configuration commands, one per line. End with CNTL/Z.
R2(config)#interface f0/1
R2(config-if)#shutdown
R2(config-if)#

```

```

R3>enable
R3#config t
Enter configuration commands, one per line. End with CNTL/Z.
R3(config)#interface f0/0
R3(config-if)#shutdown
R3(config-if)#interface f0/1
R3(config-if)#shutdown
R3(config-if)#interface s0/0/0
R3(config-if)#shutdown
R3(config-if)#

```

7. Implement DHCP and NAT for IPv4, se procede a realizar la configuración DHCP y NAT Router 1

```
R1>enable
R1#config t
Enter configuration commands, one per line. End with CNTL/Z.
R1(config)#ip dhcp excluded-address 192.168.30.1 192.168.30.30
R1(config)#ip dhcp pool ADMINISTRACION
R1(dhcp-config)#network 192.168.30.0 255.255.255.0
R1(dhcp-config)#default-router 192.168.30.1
R1(dhcp-config)#dns-server 10.10.10.11
R1(dhcp-config)#end
R1#
%SYS-5-CONFIG_I: Configured from console by console

R1#enable
R1#config t
Enter configuration commands, one per line. End with CNTL/Z.
R1(config)#ip dhcp excluded-address 192.168.40.1 192.168.40.30
R1(config)#ip dhcp pool MERCADEO
R1(dhcp-config)#network 192.168.40.0 255.255.255.0
R1(dhcp-config)#default-router 192.168.40.1
R1(dhcp-config)#dns-server 10.10.10.11
R1(dhcp-config)#end
R1#
%SYS-5-CONFIG_I: Configured from console by console
```

8. Configurar R1 como servidor DHCP para las VLANs 30 y 40.

El dispositivo R1, se configura como Servidor DHCP de las VLANs 30 y 40

```
R1>show ip dhcp binding
IP address      Client-ID/
                Hardware address
192.168.30.31   0004.9AE7.0B77
                --
192.168.40.31   0001.431C.D225
                --
Type
Automatic
Automatic
```

9. Reservar las primeras 30 direcciones IP de las VLAN 30 y 40 para configuraciones estáticas.

<p>Configurar DHCP pool para VLAN 30</p>	<p>Name: ADMINISTRACION DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.</p>
<p>Configurar DHCP pool para VLAN 40</p>	<p>Name: MERCADEO DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.</p>

```

R1(config)#ip dhcp excluded-address 192.168.30.1 192.168.30.30
R1(config)#ip dhcp excluded-address 192.168.40.1 192.168.40.30
R1(config)#ip dhcp pool administracion
R1(dhcp-config)#dns-server 10.10.10.11
R1(dhcp-config)#default-router 192.168.30.1
R1(dhcp-config)#network 192.168.30.0 255.255.255.0
R1(dhcp-config)#ip dhcp pool mercadeo
R1(dhcp-config)#dns-server 10.10.10.11
R1(dhcp-config)#default-router 192.168.40.1
R1(dhcp-config)#network 192.168.40.0 255.255.255.0
R1(dhcp-config)#

```

10. Configurar NAT en R2 para permitir que los host puedan salir a internet, se procede a realizar la configuración.

```

CONCLUSIONES

Se amplió los conocimientos y las habilidades que permiten la configuración de los dispositivos que se usan en la elaboración del presente proyecto.

Se hizo la aplicación en el Packet Tracer de redes para una posible aplicación en una red real.

Se desarrolló con la ayuda de las practicas la configuración de equipos de red Cisco, como pc, Routers y Switches.
