RESUMEN

Como estudiante de Ingeniería de Sistemas y en medio de la era de la Información se hace necesario tener grandes conocimientos en redes de datos. Estos conocimientos nos permiten adaptarnos a un creciente mercado mundial que demanda a diario profesionales competitivos y con la capacidad para entender, diseñar e implementar redes de datos. Además, se hace necesario poder diagnosticar y dar solución a los problemas específicos sobre redes.

Afortunadamente Cisco, Líder mundial en la fabricación y comercialización de componentes de comunicación, ofrece la oportunidad de certificarse realizando los cursos CCNA. Según CISCO la certificación CCNA “Es una de las certificaciones más importantes dentro de la industria de la Tecnología de la Información. Esta certificación representa el nivel asociado, orientada a habilidades prácticas en el diagnóstico y solución de problemas específicos de redes.” (Cobos Domínguez, 2017)

Este proyecto hace parte de la prueba de habilidades de la certificación CCNA. Vamos a desarrollar dos escenarios prácticos utilizando la herramienta Packet Tracert y las temáticas: direccionamiento IP, Configuración Básica de Routers y detección de vecinos, seguridad en la red, balanceo de carga, Configuración de protocolo de enrutamiento EIGRP, creación de Vlans, Configuración de NAT estático y de sobrecarga y configuración de listas de control de acceso.

ABSTRACT

As a student of Systems Engineering and in the midst of the Information Age, great knowledge is gained in data networks. This knowledge adapts us to a growing global market that demands competitive competitive and with the ability to understand, design and implement data networks. In addition, it is necessary to be able to diagnose and solve specific problems on networks.

Fortunately, Cisco, a world leader in the manufacture and commercialization of communication components, offers the opportunity to be certified by taking CCNA courses. According to CISCO CCNA certification "It is one of the most important certifications within the Information Technology industry. This certification represents the associated level, practically oriented in the diagnosis and resolution of network-specific problems.

This project is part of the CCNA certification skills test. We are going to programs two practical scenarios using the Packet Tracert tool and the themes: IP address, Basic Router Configuration and Neighbor Detection, Network Security, Load Balancing, EIGRP Routing Protocol Configuration, Creating Vlans, Static NAT configuration and access control list information and configuration.

INTRODUCCIÓN

La certificación CCNA de Cisco permite adquirir los conocimientos técnicos para implementar redes de datos y solucionar cualquier tipo de problema. En esta actividad vamos a desarrollar dos situaciones elementales que contienen los lineamientos para evaluar los conceptos tratados en el este curso.

Cada una de las situaciones permite que el estudiante aplique los procedimientos y comandos necesarios para cumplir cada lineamiento. La herramienta a usar para representar gráficamente y simular las situaciones será Packet tracer. Una herramienta vital para desarrollar simulaciones y aplicar los conocimientos teóricos en un entorno amigable e intuitiva.

OBJETIVOS

OBJETIVO GENERAL

Presentar la PRUEBA DE HABILIDADES CCNA 16-4 2019, aplicando los diferentes conceptos aprendidos en los módulos CCNA1 y CCNA2.

OBJETIVOS ESPECÍFICOS

Resolver Escenario 1

- Definir una dirección de acuerdo con el número de hosts requeridos.
- Asignar los parámetros básicos y la detección de vecinos directamente conectados.
- Establecer interconexión total entre todos los hosts y poder comunicarse entre ellos sin restricciones.
- Implementar la seguridad en la red, se debe restringir el acceso y comunicación entre hosts de acuerdo con los requerimientos del administrador de red.
- Comprobar los dispositivos y su funcionamiento en la red.
- Realizar la configuración final.

Resolver Escenario 2

- Autenticación local con AAA.
- Cifrado de contraseñas.
- Un máximo de internos para acceder al router.
- Máximo tiempo de acceso al detectar ataques.
- Establezca un servidor TFTP y almacene todos los archivos necesarios de los routers.
- Configurar DHCP.
- Configurar el web server deberá tener NAT estático y el resto de los equipos de la topología emplearan NAT de sobrecarga (PAT).
- Configurar listas de control de acceso:

Descripción de escenarios propuestos para la prueba de habilidades**Escenario 1**

Una empresa posee sucursales distribuidas en las ciudades de Bogotá, Medellín y Cali en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Topología de red

Los requerimientos solicitados son los siguientes:

Parte 1: Para el direccionamiento IP debe definirse una dirección de acuerdo con el número de hosts requeridos.

Parte 2: Considerar la asignación de los parámetros básicos y la detección de vecinos directamente conectados.

Parte 3: La red y subred establecidas deberán tener una interconexión total, todos los hosts deberán ser visibles y poder comunicarse entre ellos sin restricciones.

Parte 4: Implementar la seguridad en la red, se debe restringir el acceso y comunicación entre hosts de acuerdo con los requerimientos del administrador de red.

Parte 5: Comprobación total de los dispositivos y su funcionamiento en la red.

Parte 6: Configuración final.

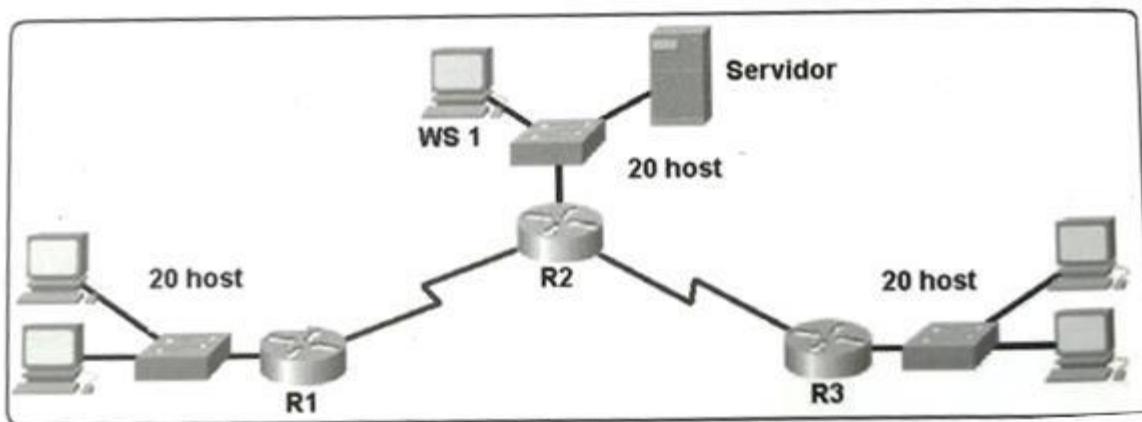

Ilustración 1 Esquema de Red (CISCO)

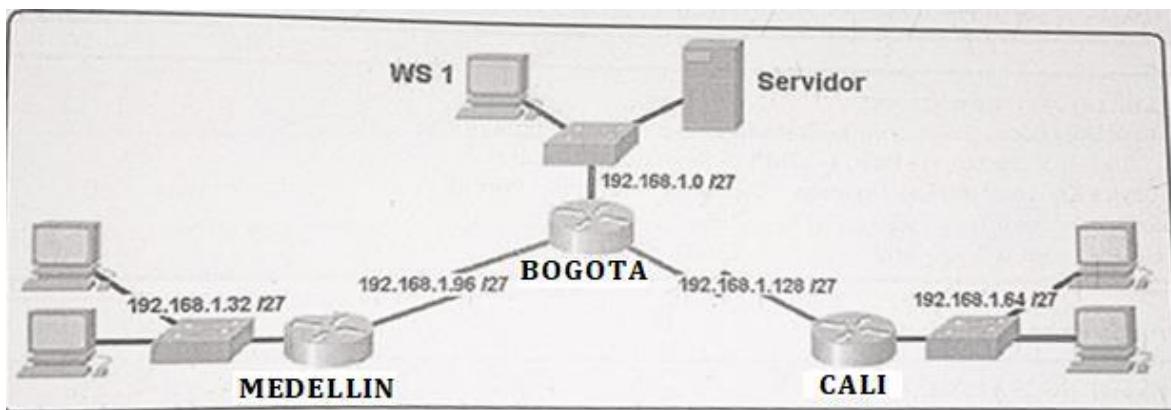

Ilustración 2 Esquema de Red (CISCO)

Desarrollo

Como trabajo inicial se debe realizar lo siguiente.

- Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).

Preparación de los Routers:

- Instalamos una tarjeta HWIC-2T que proporciona 2 puertos serie y una tarjeta en cada uno de los 3 Routers y una cobertura para el espacio vacío.

Ilustración 3 Instalación de tarjeta HWIC-2T

- Borrar la configuración de inicio

Utilizamos el comando: `erase startup-config` en cada uno de los Routers

`Router>enable`

`Router#erase startup-config`

`Erasing the nvram filesystem will remove all configuration files! Continue?`

`[confirm]`

[OK]

Erase of nvram: complete

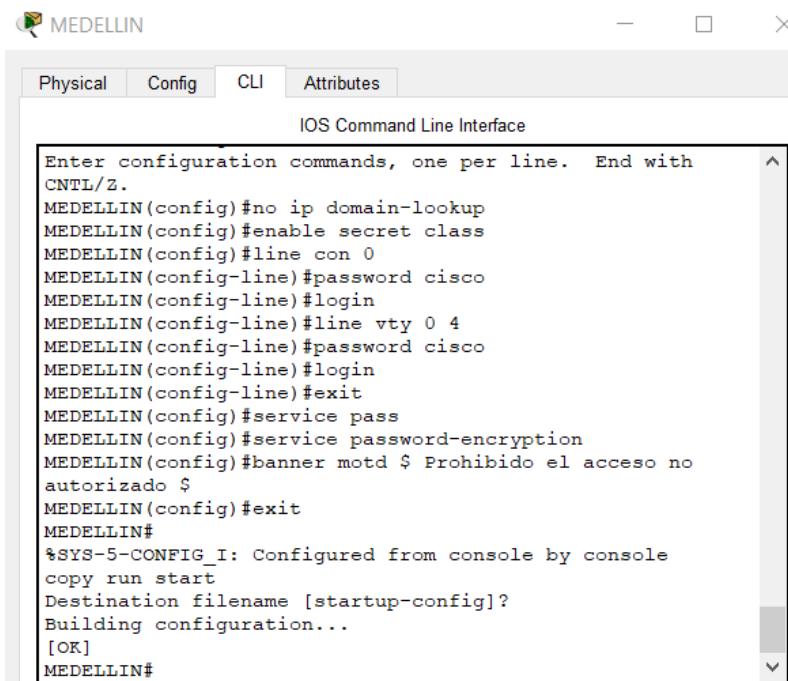

%SYS-7-NV_BLOCK_INIT: Initialized the geometry of nvram

```
Router>enable
Router#erase startup-config
Erasing the nvram filesystem will remove all configuration
files! Continue? [confirm]
[OK]
Erase of nvram: complete
%SYS-7-NV_BLOCK_INIT: Initialized the geometry of nvram
Router#
```

Ilustración 10 Configuración Switch S3

- Realizar la conexión física de los equipos con base en la topología de red

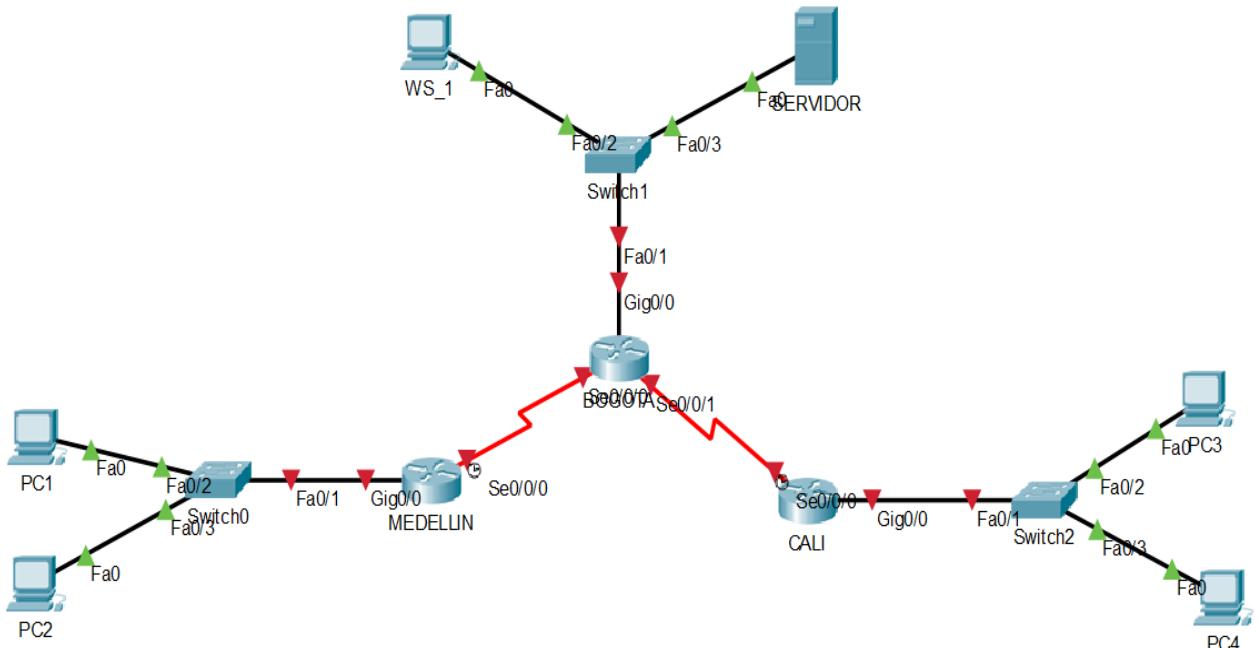

Ilustración 11 conexión física de los equipos

Configurar la topología de red, de acuerdo con las siguientes especificaciones.

Parte 1: Asignación de direcciones IP:

- a. Se debe dividir (subnetear) la red creando una segmentación en ocho partes, para permitir crecimiento futuro de la red corporativa.

Procedemos a crear 8 subredes tomando prestados 3 bits:

	Red	192.	168.	1.	000	0	0000	192.168.1.0 /27
	Mascara							255.255.255.224

Parte 4: Configuración de las listas de Control de Acceso.

En este momento cualquier usuario de la red tiene acceso a todos sus dispositivos y estaciones de trabajo. El jefe de redes le solicita implementar seguridad en la red. Para esta labor se decide configurar listas de control de acceso (ACL) a los routers.

Las condiciones para crear las ACL son las siguientes:

- a. Cada router debe estar habilitado para establecer conexiones Telnet con los demás routers y tener acceso a cualquier dispositivo en la red.

- b. El equipo WS1 y el servidor se encuentran en la subred de administración. Solo el servidor de la subred de administración debe tener acceso a cualquier otro dispositivo en cualquier parte de la red.
- c. Las estaciones de trabajo en las LAN de MEDELLIN y CALI no deben tener acceso a ningún dispositivo fuera de su subred, excepto para interconectar con el servidor.

R/ Para implementar la seguridad de la red ejecutaremos los comandos `Access-list` y `deny, permit` en los router MEDELLIN y CALI:

Router MEDELLIN

```
MEDELLIN#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
MEDELLIN(config)#Access-list 1 permit host 192.168.1.8
MEDELLIN(config)#Access-list 1 deny 192.168.1.0 0.0.0.31
MEDELLIN(config)#Access-list 1 deny 192.168.1.64 0.0.0.31
MEDELLIN(config)#Access-list 1 permit any
MEDELLIN(config)#int gigabitEthernet 0/0
MEDELLIN(config-if)#ip access-group 1 out

MEDELLIN#configure terminal
Enter configuration commands, one per line. End with
CNTL/Z.
MEDELLIN(config)#Access-list 1 permit host 192.168.1.8
MEDELLIN(config)#Access-list 1 deny 192.168.1.0 0.0.0.31
MEDELLIN(config)#Access-list 1 deny 192.168.1.64 0.0.0.31
MEDELLIN(config)#Access-list 1 permit any
MEDELLIN(config)#int gigabitEthernet 0/0
MEDELLIN(config-if)#ip access-group 1 out
```

Ilustración 43 Control de Acceso MEDELLIN

Router CALI

```
CALI#configure terminal
CALI(config-if)#Access-list 1 permit host 192.168.1.8
CALI(config)#Access-list 1 deny 192.168.1.0 0.0.0.31
CALI(config)#Access-list 1 deny 192.168.1.32 0.0.0.31
CALI(config)#Access-list 1 permit any
CALI(config)#int gigabitEthernet 0/0
CALI(config-if)#ip access-group 1 out
```

```
CALI(config-if)#
```

```
-----  
CALI(config-if)#Access-list 1 permit host 192.168.1.8  
CALI(config)#Access-list 1 deny 192.168.1.0 0.0.0.31  
CALI(config)#Access-list 1 deny 192.168.1.32 0.0.0.31  
CALI(config)#Access-list 1 permit any  
CALI(config)#int gigabitEthernet 0/0  
CALI(config-if)#ip access-group 1 out  
CALI(config-if)#
-----
```

Ilustración 44 Control de Acceso CALI

De esta manera se configura la Lista de acceso para nuestra red.

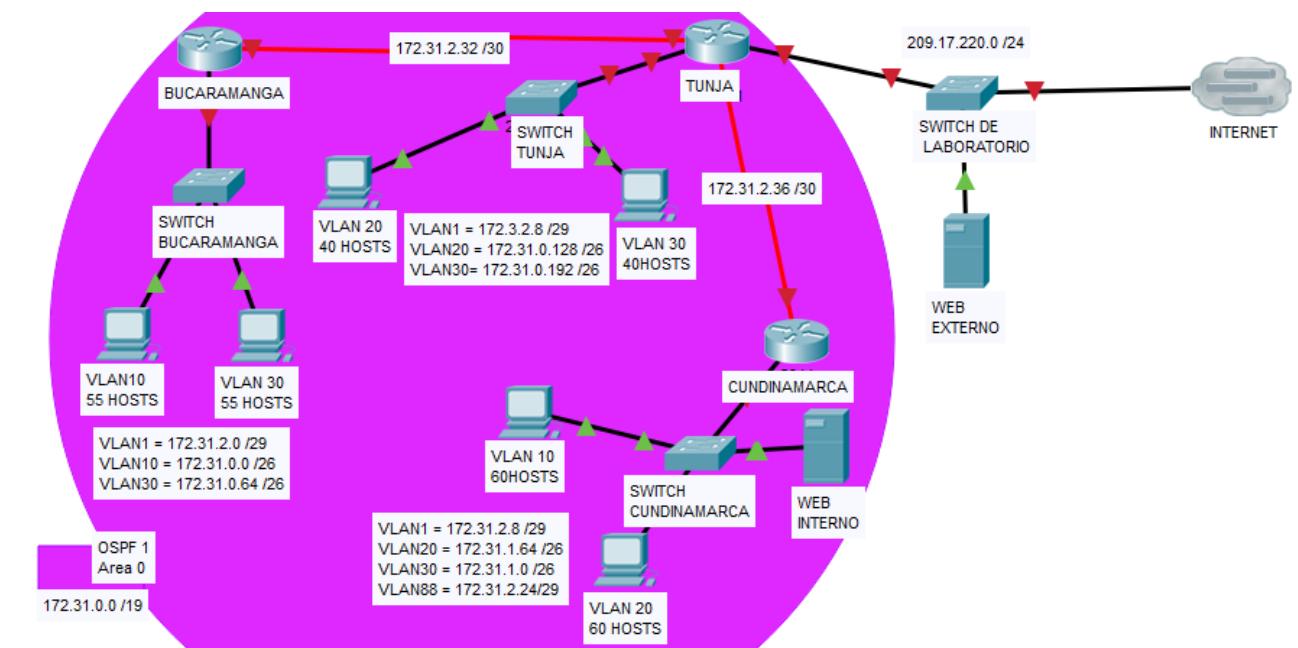

Parte 5: Comprobación de la red instalada.

- Se debe probar que la configuración de las listas de acceso fue exitosa.
- Comprobar y Completar la siguiente tabla de condiciones de prueba para confirmar el óptimo funcionamiento de la red e.

ORIGEN	DESTINO	RESULTADO	
TELNET	Router MEDELLIN	Correcto	
	WS_1	Correcto	
	Servidor	Correcto	
	Servidor	Correcto

	Router MEDELLIN	LAN del Router CALI	Correcto

Escenario 2

Una empresa tiene la conexión a internet en una red Ethernet, lo cual deben adaptarlo para facilitar que sus routers y las redes que incluyen puedan, por esa vía, conectarse a internet, pero empleando las direcciones de la red LAN original.

Desarrollo

Los siguientes son los requerimientos necesarios:

1. Todos los routers deberán tener los siguiente:

- **Configuración básica.**

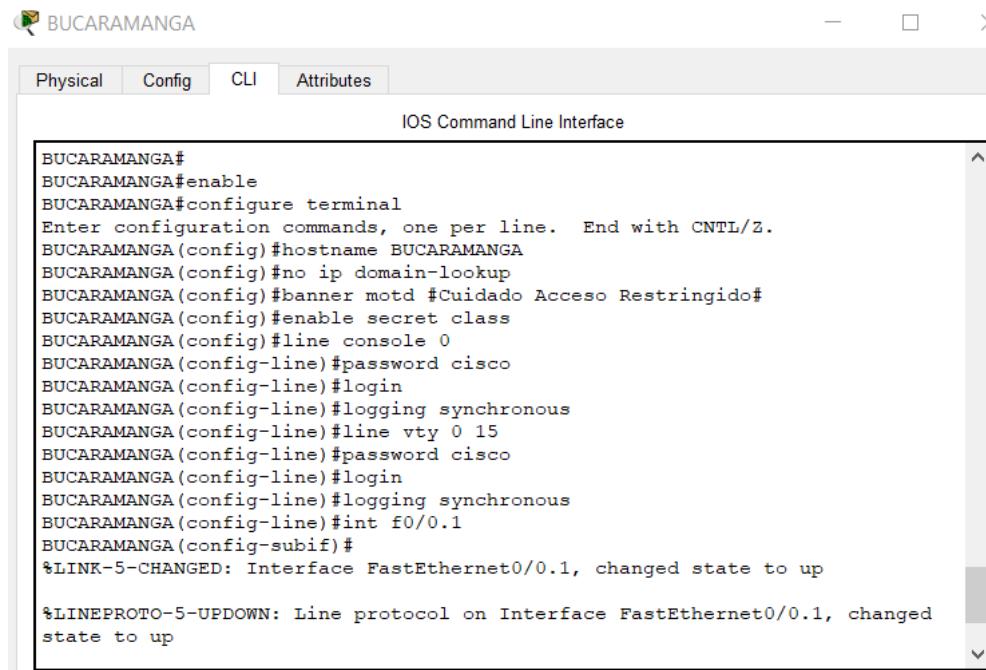

Configuración básica Router BUCARAMANGA

```

Router>enable
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname BUCARAMANGA
BUCARAMANGA(config)#no ip domain-lookup
BUCARAMANGA(config)#banner motd #Cuidado Acceso Restringido#

```

```
BUCARAMANGA(config)#enable secret class123
BUCARAMANGA(config)#line console 0
BUCARAMANGA(config-line)#password cisco123
BUCARAMANGA(config-line)#login
BUCARAMANGA(config-line)#logging synchronous
BUCARAMANGA(config-line)#line vty 0 15
BUCARAMANGA(config-line)#password cisco123
BUCARAMANGA(config-line)#login
BUCARAMANGA(config-line)#logging synchronous
BUCARAMANGA(config)#int f0/0.1
BUCARAMANGA(config-subif)#encapsulation dot1q 1
BUCARAMANGA(config-subif)#ip address 172.31.2.1 255.255.255.248
BUCARAMANGA(config-subif)#int f0/0.10
BUCARAMANGA(config-subif)#encapsulation dot1q 10
BUCARAMANGA(config-subif)#ip address 172.31.0.1 255.255.255.192
BUCARAMANGA(config-subif)#int f0/0.30
BUCARAMANGA(config-subif)#encapsulation dot1q 30
BUCARAMANGA(config-subif)#ip address 172.31.0.65 255.255.255.192
BUCARAMANGA(config-subif)#int f0/0
BUCARAMANGA(config-if)#no shutdown
BUCARAMANGA(config-if)#int s0/0/0
BUCARAMANGA(config-if)#ip address 172.31.2.34 255.255.255.252
BUCARAMANGA(config-if)#no shutdown
%LINK-5-CHANGED: Interface Serial0/0/0, changed state to down
BUCARAMANGA(config-if)#
BUCARAMANGA(config-if)#router ospf 1
BUCARAMANGA(config-router)#network 172.31.0.0 0.0.0.63 area 0
BUCARAMANGA(config-router)#network 172.31.0.64 0.0.0.63 area 0
BUCARAMANGA(config-router)#network 172.31.2.0 0.0.0.7 area 0
BUCARAMANGA(config-router)#network 172.31.2.32 0.0.0.3 area 0
BUCARAMANGA(config-router)#end
```

```
BUCARAMANGA#
BUCARAMANGA#enable
BUCARAMANGA#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
BUCARAMANGA(config)#hostname BUCARAMANGA
BUCARAMANGA(config)#no ip domain-lookup
BUCARAMANGA(config)#banner motd #Cuidado Acceso Restringido#
BUCARAMANGA(config)#enable secret class
BUCARAMANGA(config)#line console 0
BUCARAMANGA(config-line)#password cisco
BUCARAMANGA(config-line)#login
BUCARAMANGA(config-line)#logging synchronous
BUCARAMANGA(config-line)#line vty 0 15
BUCARAMANGA(config-line)#password cisco
BUCARAMANGA(config-line)#login
BUCARAMANGA(config-line)#logging synchronous
BUCARAMANGA(config-line)#int f0/0.1
BUCARAMANGA(config-subif)#
%LINK-5-CHANGED: Interface FastEthernet0/0.1, changed state to up

%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/0.1, changed
state to up
```

Ilustración 45 Configuración básica Router BUCARAMANGA

Configuración básica Router TUNJA

```
Router#enable
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname TUNJA
TUNJA(config)#no ip domain-lookup
TUNJA(config)#banner motd #Cuidado Acceso Restringido#
TUNJA(config)#enable secret class
TUNJA(config)#line console 0
TUNJA(config-line)#password cisco
TUNJA(config-line)#login
TUNJA(config-line)#logging synchronous
TUNJA(config-line)#line vty 0 15
TUNJA(config-line)#password cisco

Ilustración 92 Control de acceso router CUNDINAMARCA

Ilustración 93 Control de acceso Telnet

Aspectos a tener en cuenta

- Habilitar VLAN en cada switch y permitir su enrutamiento.
- Enrutamiento OSPF con autenticación en cada router.
- Servicio DHCP en el router Tunja, mediante el helper address, para los routers Bucaramanga y Cundinamarca.
- Configuración de NAT estático y de sobrecarga.
- Establecer una lista de control de acceso de acuerdo con los criterios señalados.
- Habilitar las opciones en puerto consola y terminal virtual

CONCLUSIONES

Luego de culminar esta actividad y de resolver los 2 escenarios podemos afirmar que los distintos conceptos ofrecidos por los cursos CCNA1 y CCNA2 fueron asimilados y aplicados según los requerimientos. Los objetivos fueron alcanzados satisfactoriamente y los conceptos de direccionamiento IP, Configuración Básica de Routers y detección de vecinos, seguridad en la red, balanceo de carga, Configuración de protocolo de enrutamiento EIGRP, creación de Vlans, Configuración de NAT estático y de sobrecarga y configuración de listas de control de acceso se aplicaron de manera adecuada con la aplicación Packet tracer.
