Bibliografía	50

## Resumen

El propósito principal de este contenido es dar a conocer los resultados obtenidos durante el desarrollo de los diferentes trabajos colaborativos que se abordaron y solucionaron durante el curso, lo importante es dar a conocer que contamos con capacidades para resolver problemas de redes dentro de una empresa o para empezar a trabajar como independientes.

La Universidad Nacional Abierta y a Distancia UNAD en colaboración con CISCO Networking Academy ha puesto en marcha el diplomado CISCO diseño e implementación de redes LAN-WAN como opción de grado para los estudiantes que están culminando sus estudios en ingeniería de sistemas, aparte de la gran facilidad de opción de grado es un curso que nos brinda una gran cantidad de recursos y conocimientos para adentrarnos en un mundo de redes de forma profesional.

## Abstract

The main purpose of this content is to publicize the results obtained during the development of the different collaborative works that are addressed and resolved during the course, the important thing is to make known that we have capabilities to solve network problems within a company or in To start working as freelancers.

The National Open and Distance University UNAD in collaboration with CISCO Networking Academy has launched the CISCO diploma design and implementation of LAN-WAN networks as a degree option for students who are completing their studies in systems engineering, apart from the great ease The degree option is a course that gives us a lot of resources and knowledge to enter a world of networks in a professional way.

## Introducción

La globalización de internet ha producido un cambio significativo en el crecimiento y en cómo se comunican las empresas de tecnología, ya que ninguna quiere quedarse fuera de este constante desarrollo tecnológico. A medida que programadores y especialistas en TI evolucionen en crear cada vez lo imposible en el ámbito de las comunicaciones, las empresas seguirán su ritmo o si no desaparecerán.

Hoy día el funcionamiento de una empresa consta de muchos factores importantes entre uno de ellos está el de la red, este es de mucha importancia para poder realizar la comunicación con todos los canales que esta cuenta y para ellos debemos conocer cómo funciona y como se debe implementar ya sea en una casa, una pequeña empresa o una gran corporación.

En estos documentos vamos a mostrar algunas cosas especiales de cómo se debe configurar e implementar. Para resolver este caso de estudio es necesario implementar configuración de enrutamiento, asignar direcciones Ip, configuración de protocolos de enrutamiento y diseñar e implementar NAT estáticas.

## **Objetivo General**

Desarrollar el caso de estudio CCNA de la prueba de habilidades prácticas que forma parte de las actividades evaluativas del Diplomado de Profundización CCNA, la cual busca identificar el grado de desarrollo de competencias y habilidades que fueron adquiridas a lo largo del diplomado y a través de la cual se pondrá a prueba los niveles de comprensión y solución de problemas relacionados con diversos aspectos de Networking.

## 1. Escenario uno

Una empresa posee sucursales distribuidas en las ciudades de Bogotá, Medellín y Cali en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enruteamiento y demás aspectos que forman parte de la topología de red.

### 1. Topología de red

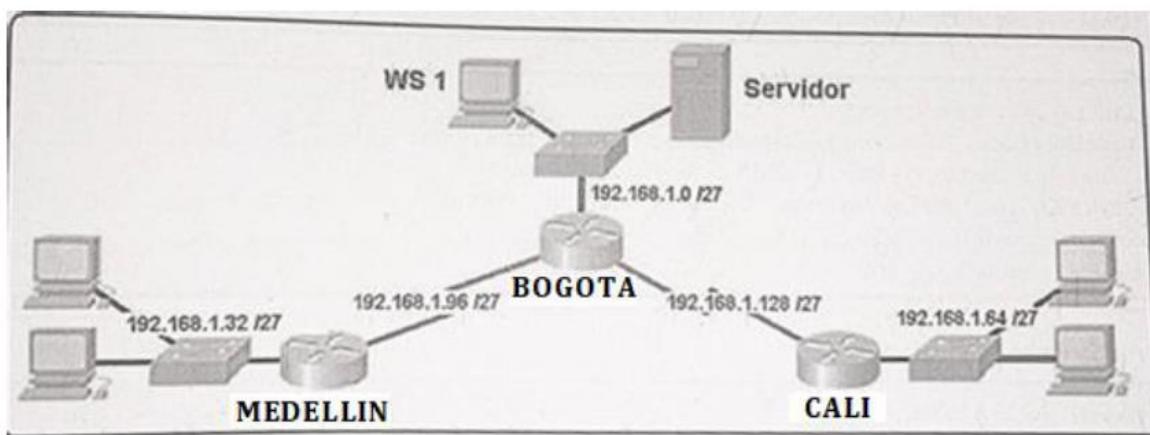

Figura 1. Imagen de topología tomada de red inicial para el escenario

#### 1.1 Topología de red en Packet Tracer

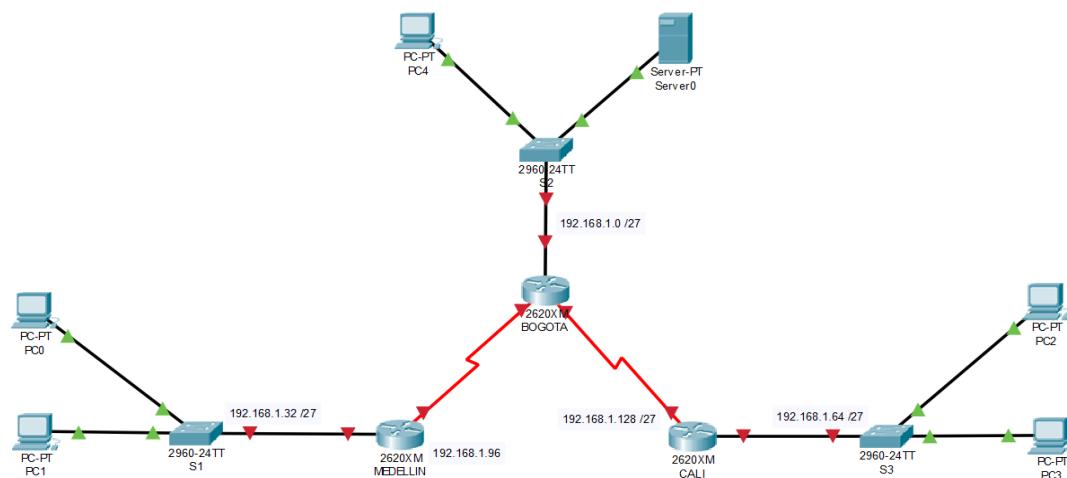

Figura 2. Imagen de topología en Packet Tracer

## 1.2 Tabla de enrutamiento para la red

	R1	R2	R3
Nombre de Host	MEDELLIN	BOGOTA	CALI
Dirección de Ip en interfaz Serial 0/0	192.168.1.99	192.168.1.98	192.168.1.131
Dirección de Ip en interfaz Serial 0/1		192.168.1.130	
Dirección de Ip en interfaz FA 0/0	192.168.1.33	192.168.1.1	192.168.1.65
Protocolo de enrutamiento	Eigrp	Eigrp	Eigrp
Sistema Autónomo	200	200	200
Afirmaciones de red	192.168.1.0	192.168.1.0	192.168.1.0

Tabla 1. Tabla de configuración de dispositivos

## 1.3 Configuración inicial de dispositivos

### 1.3.1 Router Bogotá

```

Router>enable
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#no ip domain-lo
Router(config)#no ip domain-lookup
Router(config)#Hostname BOGOTA
BOGOTA(config)#enable secret cisco
BOGOTA(config)#line console 0
BOGOTA(config-line)#password cisco
BOGOTA (config-line)#login
BOGOTA(config-line)#exit
BOGOTA(config)#line vty 0 4
BOGOTA(config-line)#password cisco
BOGOTA(config-line)#login
BOGOTA(config-line)#exit
BOGOTA(config)#service password-encryption
BOGOTA(config)#banner motd #Acceso solo a personal autorizado#
BOGOTA(config)#exit
BOGOTA#
%SYS-5-CONFIG_I: Configured from console by console
BOGOTA#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
BOGOTA#

```

### 1.3.2 Router Medellín

```
Router>enable
Router#conf ter
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#no ip domain-lookup
Router(config)#hostname MEDELLIN
MEDELLIN(config)#enable secret cisco
MEDELLIN(config)#line console 0
MEDELLIN(config-line)#password cisco
MEDELLIN(config-line)#login
MEDELLIN(config-line)#exit
MEDELLIN(config)#line vty 0 4
MEDELLIN(config-line)#password cisco
MEDELLIN(config-line)#login
MEDELLIN(config-line)#exit
MEDELLIN(config)#service password-encryption
MEDELLIN(config)#banner motd #Acceso solo a personal autorizado#
MEDELLIN(config)#exit
MEDELLIN#
%SYS-5-CONFIG_I: Configured from console by console
MEDELLIN#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
MEDELLIN#
```

### 1.3.3 Router Cali

```
Router>enable
Router#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#no ip domain-lookup
Router(config)#hostname CALI
CALI(config)#enable secret cisco
CALI(config)#line console 0
CALI(config-line)#password cisco
CALI(config-line)#login
CALI(config-line)#exit
CALI(config)#line vty 0 4
CALI(config-line)#password cisco
CALI(config-line)#login
CALI(config-line)#exit
CALI(config)#service password-encryption
CALI(config)#banner motd #Acceso solo a personal autorizado#
```

```
CALI(config)#exit
CALI#
%SYS-5-CONFIG_I: Configured from console by console
CALI#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
CALI#
```

#### 1.3.4 Switch S1

```
Switch>enable
Switch#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)#hostname S1
S1(config)#enable secret cisco
S1(config)#line console 0
S1(config-line)#password cisco
S1(config-line)#login
S1(config-line)#exit
S1(config)#line vty 0 4
S1(config-line)#password cisco
S1(config-line)#login
S1(config-line)#service password-encryption
S1(config)#banner motd #Acceso solo a personal autorizado#
S1(config)#exit
S1#
%SYS-5-CONFIG_I: Configured from console by console
S1#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
S1#
```

#### 1.3.5 Switch S2

```
Switch>enable
Switch#conf termi
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)#hostname S2
S2(config)#enable secret cisco
S2(config)#line console 0
S2(config-line)#password cisco
S2(config-line)#login
S2(config-line)#exit
```

```
S2(config)#line vty 0 4
S2(config-line)#password cisco
S2(config-line)#login
S2(config-line)#service password-encryption
S2(config)#banner motd #Acceso solo a personal autorizado#
S2(config)#exit
S2#
%SYS-5-CONFIG_I: Configured from console by console
S2#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
S2#
```

### 1.3.6 Switch S3

```
Switch>enable
Switch#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)#hostname S3
S3(config)#enable secret cisco
S3(config)#line console 0
S3(config-line)#password cisco
S3(config-line)#login
S3(config-line)#exit
S3(config)#line vty 0 4
S3(config-line)#password cisco
S3(config-line)#login
S3(config-line)#service password-encryption
S3(config)#banner motd #Acceso solo a personal autorizado#
S3(config)#exit
S3#
%SYS-5-CONFIG_I: Configured from console by console
S3#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
S3#
```

## 1.4 Configuración interfaz y seriales

Se realizó la configuración de las interfaces y los seriales según se estableció en la tabla para el escenario uno.

### 1.4.1 Router Bogotá

```
Acceso solo a personal autorizado
User Access Verification
Password:
BOGOTA>enable
Password:
BOGOTA#conf term
Enter configuration commands, one per line. End with CNTL/Z.
BOGOTA(config)#interface fastethernet 0/0
BOGOTA(config-if)#ip address 192.168.1.1 255.255.255.224
BOGOTA(config-if)#no shutdown
BOGOTA(config-if)#
%LINK-5-CHANGED: Interface FastEthernet0/0, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/0, changed
state to up
BOGOTA(config-if)#exit
BOGOTA(config)#interface serial 0/0
BOGOTA(config-if)#ip address 192.168.1.98 255.255.255.224
BOGOTA(config-if)#no shutdown
%LINK-5-CHANGED: Interface Serial0/0, changed state to down
BOGOTA(config-if)#exit
BOGOTA(config)#interface serial 0/1
BOGOTA(config-if)#ip address 192.168.1.130 255.255.255.224
BOGOTA(config-if)#no shutdown
%LINK-5-CHANGED: Interface Serial0/1, changed state to down
BOGOTA(config-if)#exit
BOGOTA(config)#ip route 192.168.1.64 255.255.255.224 192.168.1.131
BOGOTA(config)#ip route 192.168.1.32 255.255.255.224 192.168.1.99
BOGOTA(config)#exit
BOGOTA#

## 1.8 Asignación de enrutamiento EIGRP

Se realiza la asignación de enrutamiento EIGRP a los routers considerando el direccionamiento diseñado.

### 1.8.1 Router Bogotá

```
BOGOTA>enable
Password:
BOGOTA#conf term
Enter configuration commands, one per line. End with CNTL/Z.
BOGOTA(config)#router eigrp 10
BOGOTA(config-router)#network 192.168.1.0 0.0.0.31
BOGOTA(config-router)#network 192.168.1.96 0.0.0.31
BOGOTA(config-router)#
%DUAL-5-NBRCHANGE: IP-EIGRP 10: Neighbor 192.168.1.99 (Serial0/0) is up:
new adjacency
BOGOTA(config-router)#network 192.168.1.128 0.0.0.31
BOGOTA(config-router)#no auto-summary
BOGOTA(config-router)#
%DUAL-5-NBRCHANGE: IP-EIGRP 10: Neighbor 192.168.1.99 (Serial0/0) resync:
summary configured
BOGOTA(config-router)#exit
BOGOTA(config)#+
```

### 1.8.2 Router Medellín

```
MEDELLIN>enable
Password:
MEDELLIN#conf term
Enter configuration commands, one per line. End with CNTL/Z.
MEDELLIN(config)#router eigrp 10
MEDELLIN(config-router)#network 192.168.1.96 0.0.0.31
MEDELLIN(config-router)#network 192.168.1.32 0.0.0.31
MEDELLIN(config-router)#network 192.168.1.128 0.0.0.31
MEDELLIN(config-router)#+
```

### 1.8.3 Router Cali

```
CALI>enable
Password:
CALI#conf term
Enter configuration commands, one per line. End with CNTL/Z.
CALI(config)#router eigrp 10
CALI(config-router)#network 192.168.1.128 0.0.0.31
CALI(config-router)#network 192.168.1.64 0.0.0.31
CALI(config-router)#no auto-summary
CALI(config-router)#exit
CALI(config)#exit
```

### 1.9 Verificación de vecindad EIGRP en los routers

Se realiza la verificación de vecindad dada por los comandos show ip eigrp neighbors y show ip eigrp topology

#### 1.9.1 Router Bogotá

```
BOGOTA>enable
Password:
BOGOTA#show ip eigrp neighbors
IP-EIGRP neighbors for process 10

## 1.11 Diagnóstico de comprobación de puntos de la red

Se realiza comprobación de diagnóstico mediante el comando ping para verificar los puntos de Red del escenario.

### 1.11.1 Host de red LAN del router Cali a red Medellín

```
Command Prompt X

Packet Tracer PC Command Line 1.0
C:\>ping 192.168.1.34

Pinging 192.168.1.34 with 32 bytes of data:

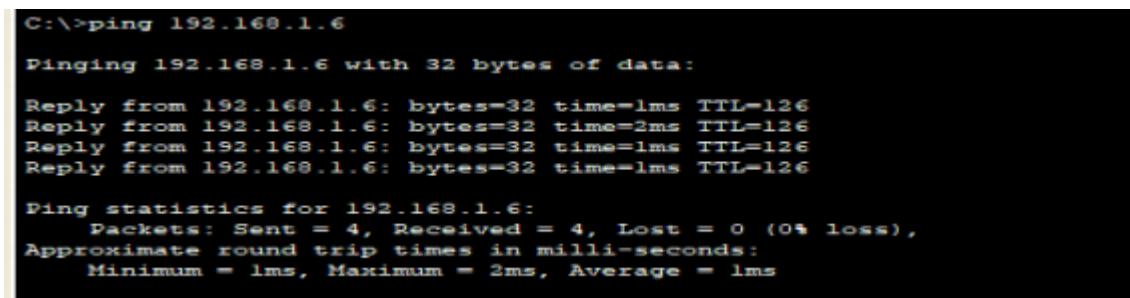

Request timed out.
Reply from 192.168.1.34: bytes=32 time=3ms TTL=125
Reply from 192.168.1.34: bytes=32 time=12ms TTL=125
Reply from 192.168.1.34: bytes=32 time=12ms TTL=125

Ping statistics for 192.168.1.34:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
Approximate round trip times in milli-seconds:
    Minimum = 3ms, Maximum = 12ms, Average = 9ms

C:\>
```

Figura 16. Imagenes ping de LAN Cali a red Medellin

### 1.11.2 Host de red LAN del router Cali a red servidor

```
C:\>ping 192.168.1.6

Pinging 192.168.1.6 with 32 bytes of data:

Reply from 192.168.1.6: bytes=32 time=1ms TTL=126
Reply from 192.168.1.6: bytes=32 time=2ms TTL=126
Reply from 192.168.1.6: bytes=32 time=1ms TTL=126
Reply from 192.168.1.6: bytes=32 time=1ms TTL=126

Ping statistics for 192.168.1.6:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 1ms, Maximum = 2ms, Average = 1ms
```

Figura 17. Imágenes ping de LAN Cali a red Servidor

## 1.12 Configuración list de control de acceso

En este momento cualquier usuario de la Red tiene acceso a todos sus dispositivos y estaciones de trabajo. El jefe de redes le solicita implementar seguridad en la red. Para esta labor se decide configurar listas de control de acceso (ACL) a los routers. Las condiciones para crear las ACL son las siguientes:

Configuración de habilitación para establecer conexiones Telnet.

En la configuración inicial de cada router se estableció la configuración necesaria para la habilitación de las conexiones Telnet.

### 1.12.1 Router Bogotá

```
BOGOTA>enable  
Password:  
BOGOTA#confi  
BOGOTA#configure terminal  
Enter configuration commands, one per line. End with CNTL/Z.  
BOGOTA(config)#line vty 0 4  
BOGOTA(config-line)#password cisco  
BOGOTA(config-line)#login  
BOGOTA(config-line)#exit  
BOGOTA(config)#
```

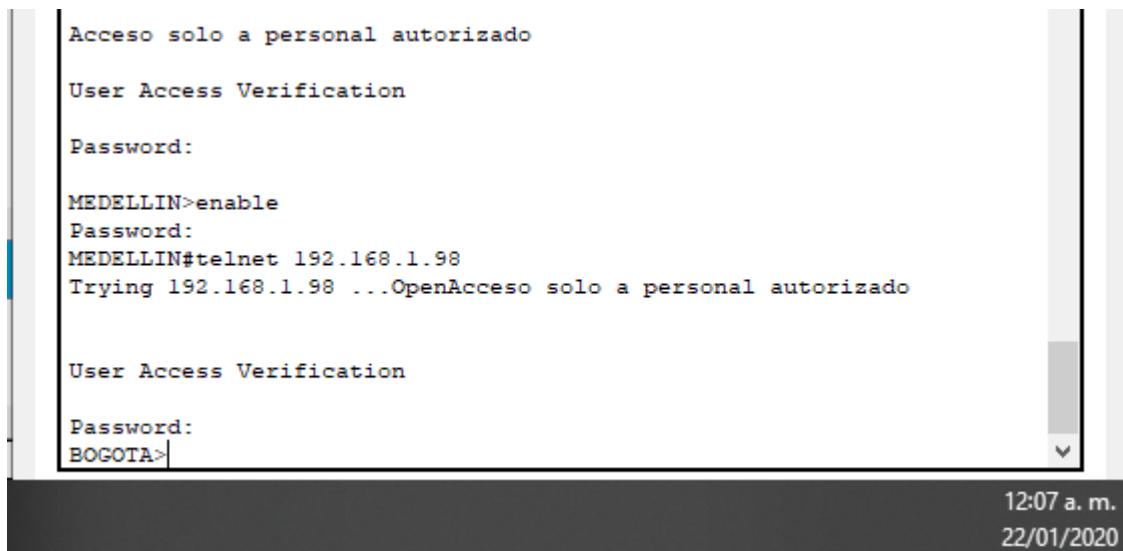

### 1.12.2 Router Medellín

```
MEDELLIN#conf term  
Enter configuration commands, one per line. End with CNTL/Z.  
MEDELLIN(config)#line vty 0 4  
MEDELLIN(config-line)#password cisco  
MEDELLIN(config-line)#login  
MEDELLIN(config-line)#exit  
MEDELLIN(config)#
```

### 1.12.3 Router Cali

```
CALI#conf term  
Enter configuration commands, one per line. End with CNTL/Z.  
CALI(config)#line vty 0 15  
CALI(config-line)#password cisco  
CALI(config-line)#login  
CALI(config-line)#exit
```

#### 1.12.4 Conexión Telnet entre routers Medellin-Bogota

## 2. Escenario dos

Una empresa tiene la conexión a internet en una red Ethernet, lo cual deben adaptarlo para facilitar que sus routers y las redes que incluyen puedan, por esa vía, conectarse a internet, pero empleando las direcciones de la red LAN original.

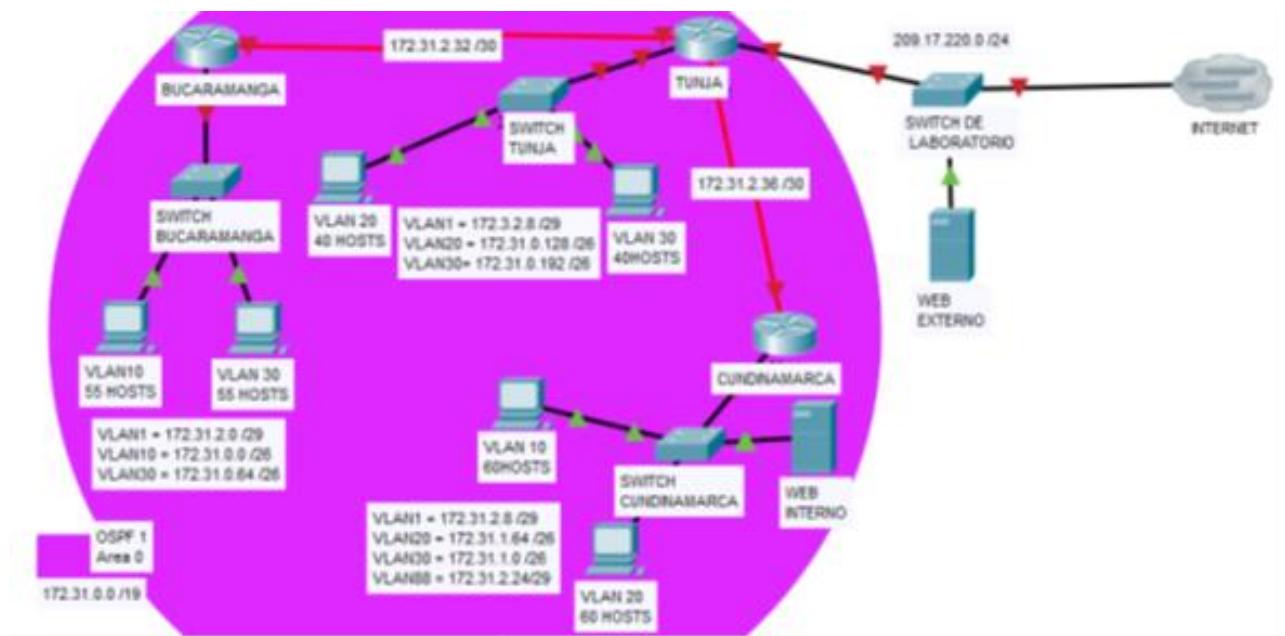

Figura 20. Imagen esquema escenario 2 propuesto

### 2.1 Comprobación de la red instalada.

Los siguientes son los requerimientos necesarios:

Todos los routers deberán tener los siguiente:

- Configuración básica.
- Autenticación local con AAA.
- Cifrado de contraseñas.
- Un máximo de internos para acceder al router.
- Máximo tiempo de acceso al detectar ataques.

### 2.1.1 Topología

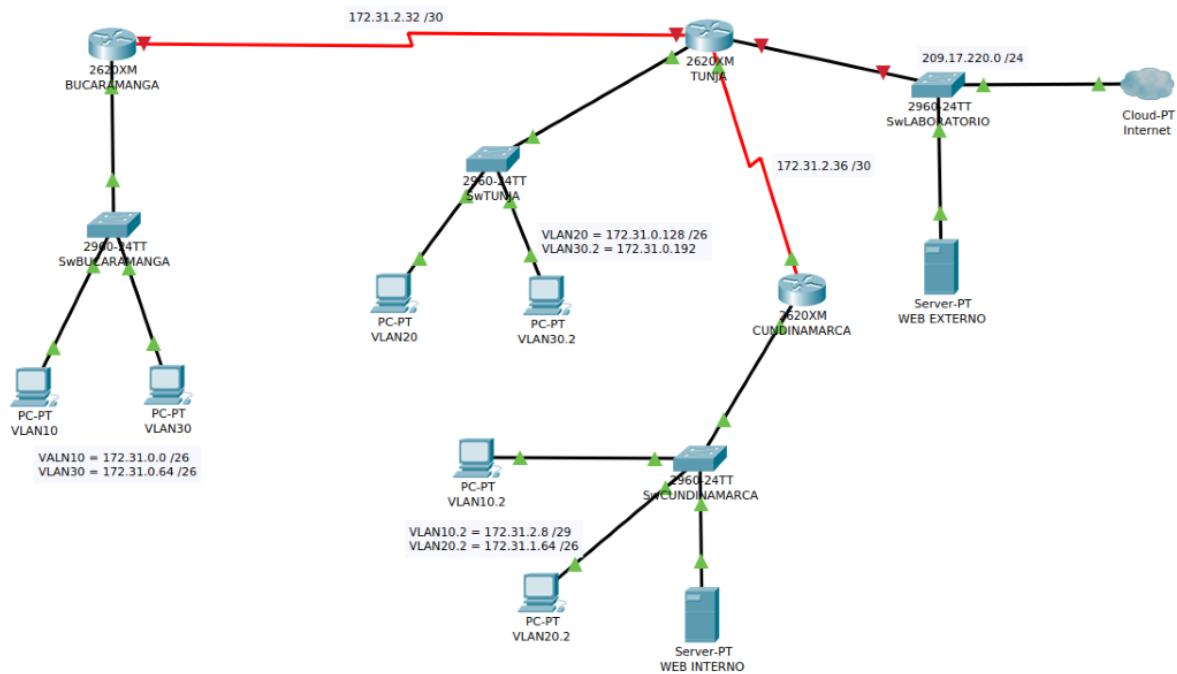

Figura 21. Imagen de esquema en Packet Tracer

### 2.1.2 Router Bucaramanga

```

Router>enable
Router#conf term
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname BUCARAMANGA
BUCARAMANGA(config)#no ip domain-lookup

TUNJA(config)#
```

## Conclusiones

Como hemos visto el curso de profundización CISCO comprende una temática específica y general sobre fundamentos en las telecomunicaciones; lo que representa un gran avance dentro de mi campo de formación profesional.

Dentro del desarrollo de este trabajo final para el diplomado pusimos en práctica muchos de los conceptos que desarrollamos en los trabajos colaborativos de las fases anteriores, se implementaron dos escenarios en los cuales se administró de forma correcta toda una red para una empresa.

Podemos decir que aprendimos a realizar configuraciones básicas en equipos Cisco, configurar diferentes dispositivos y realizar la simulación con múltiples opciones de análisis
