RESUMEN

Internet es la red más extensa que existe, la cual proporciona los servicios que permiten conectarnos, comunicarnos desde cualquier parte del mundo, desarrollar y facilitar el trabajo, las relaciones business-to-business, el comercio electrónico e intereses personales, etc., pero también existen redes de todo tamaño que pueden ir desde redes simples, compuestas mínimo por dos PC, hasta redes que conectan millones de dispositivos.

La infraestructura de red es la plataforma que da soporte a la red, puede variar ampliamente en términos de tamaño, cantidad de usuarios, y cantidad y tipo de servicios y la plataforma de routing y switching es la base de toda infraestructura en entornos de red de Cisco. Adicionalmente, las redes deben ser confiables, tolerantes a fallas, escalables, deben proporcionar calidad de servicio y garantizar la seguridad de la información y de los recursos en ellas.

Por lo anterior, se plantea dos escenarios para la construcción y funcionamiento de cada una de la red, en la que se pone a prueba las habilidades y conocimiento adquirido en el Diplomado de Profundización Cisco (implementación de soluciones integradas lan / wan).

ABSTRACT

The Internet is the most extensive network that exists, which provides the services that allow us to connect, communicate from anywhere in the world, develop and facilitate work, business-to-business relationships, electronic commerce and personal interests, etc., but There are also networks of all sizes that can range from simple networks, composed of minimum for two PCs, to networks that connect millions of devices.

The network infrastructure is the platform that supports the network, it can vary in terms of size, number of users, amount and type of services and the routing and switching platform is the basis of the entire infrastructure in Cisco network environments In addition, networks must be reliable, fault tolerant, scalable, must provide quality of service and ensure the security of information and resources in them.

Therefore, two situations arise for the construction and operation of each of the network, in which the skills and knowledge acquired in the Cisco Deepening Diploma (implementation of integrated lan / wan solutions) are tested.

INTRODUCCIÓN

En un mundo globalizado, donde la tecnología avanza a pasos agigantados, donde el uso de la internet permite extender y potenciar nuestra capacidad de comunicarnos sin límites, donde se producen las interacciones sociales, comerciales, políticas y personales que cambia en forma continua, por ende, se debe estar al día con la evolución de esta red global.

Por lo tanto, los desarrolladores, programadores usan el internet como punto de inicio para sus esfuerzos, creando nuevos productos y servicios diseñados específicamente para aprovechar las funcionalidades de la red, en la medida que estos impulsen los límites de lo posible, las funcionalidades de las redes interconectadas que crean la Internet jugarán un papel cada vez más grande en el éxito de los proyectos.

Como también, como futuros profesionales, al realizar el Diplomado de Profundización CCNA, le permitirá explorar el material que presenta las bases para explorar los servicios, las tecnologías y los problemas que enfrentaran en el diseño y construcción de una red moderna y acorde a las necesidades de los clientes.

OBJETIVOS

GENERAL:

Identificar el grado de desarrollo de competencias y habilidades que fueron adquiridas a lo largo del Diplomado de Profundización CCNA, poniendo a prueba los niveles de comprensión y solución de dos problemas relacionados con diversos aspectos de Networking.

ESPECÍFICOS:

- Aplicar los conocimientos adquiridos durante del diplomado y desarrollar prueba de habilidades.
- Desarrollar dos (2) escenarios propuestos, acompañado de los respectivos procesos de documentación de la solución.
- Registrar en documento los correspondientes al registro de la configuración de cada uno de los dispositivos, la descripción detallada del paso a paso de cada una de las etapas realizadas durante su desarrollo, el registro de los procesos de verificación de conectividad mediante el uso de comandos ping, traceroute, show ip route, entre otros.

DESARROLLO DE LOS DOS ESCENARIOS

1. ESCENARIO 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá, Medellín y Cali en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

1.1. Topología de la Red

Figura 1. Modelo Topología de Red Escenario 1

1.2. Configuración de equipos.

Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).

Configuración Router – Bogota

```
Router>enable
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname BOGOTA
BOGOTA(config)#no ip domain-lookup
BOGOTA(config)#service password-encryption
BOGOTA(config)#enable secret class
BOGOTA(config)#banner motd #
Enter TEXT message. End with the character '#'.
Acceso restringido.#
```

```
BOGOTA(config)#line console 0
BOGOTA(config-line)#password cisco
BOGOTA(config-line)#login
BOGOTA(config-line)#logging synchronous
BOGOTA(config-line)#line vty 0 15
BOGOTA(config-line)#password cisco
BOGOTA(config-line)#logging synchronous
BOGOTA(config-line)#login
BOGOTA(config-line)#exit
BOGOTA(config)#end
BOGOTA#
%SYS-5-CONFIG_I: Configured from console by console
```

```
BOGOTA#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
BOGOTA#
```

Configuración Router – Medellin

```
Router>enable
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname MEDELLIN
MEDELLIN(config)#no ip domain-lookup
MEDELLIN(config)#service password-encryption
MEDELLIN(config)#enable secret class
MEDELLIN(config)#banner motd #
Enter TEXT message. End with the character '#'.
Acceso restringido.#
```

```

MEDELLIN(config)#line console 0
MEDELLIN(config-line)#password cisco
MEDELLIN(config-line)#login
MEDELLIN(config-line)#logging synchronous
MEDELLIN(config-line)#line vty 0 15
MEDELLIN(config-line)#password cisco
MEDELLIN(config-line)#logging synchronous
MEDELLIN(config-line)#login
MEDELLIN(config-line)#end
MEDELLIN#
%SYS-5-CONFIG_I: Configured from console by console

```

```

MEDELLIN#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
MEDELLIN#

```

Configuracion Router – Cali

```

Router>enable
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname CALI
CALI(config)#no ip domain-lookup
CALI(config)#service password-encryption
CALI(config)#enable secret class
CALI(config)#banner motd #
Enter TEXT message. End with the character '#'.
Acceso restringido.#

```

```

CALI(config)#line console 0
CALI(config-line)#password cisco
CALI(config-line)#login
CALI(config-line)#logging synchronous
CALI(config-line)#line vty 0 15
CALI(config-line)#password cisco
CALI(config-line)#logging synchronous
CALI(config-line)#login
CALI(config-line)#end
CALI#
%SYS-5-CONFIG_I: Configured from console by console

```

```

CALI#copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
CALI#

```

1.3. Conexión física de los equipos.

Realizar la conexión física de los equipos con base en la topología de red.

Dipositivos requeridos

3 Routers (cisco 1941)
 3 Switch (cisco 2960-24TT)
 1 Servidor
 5 PCs con Windows 7
 Cables Serial y Ethernet

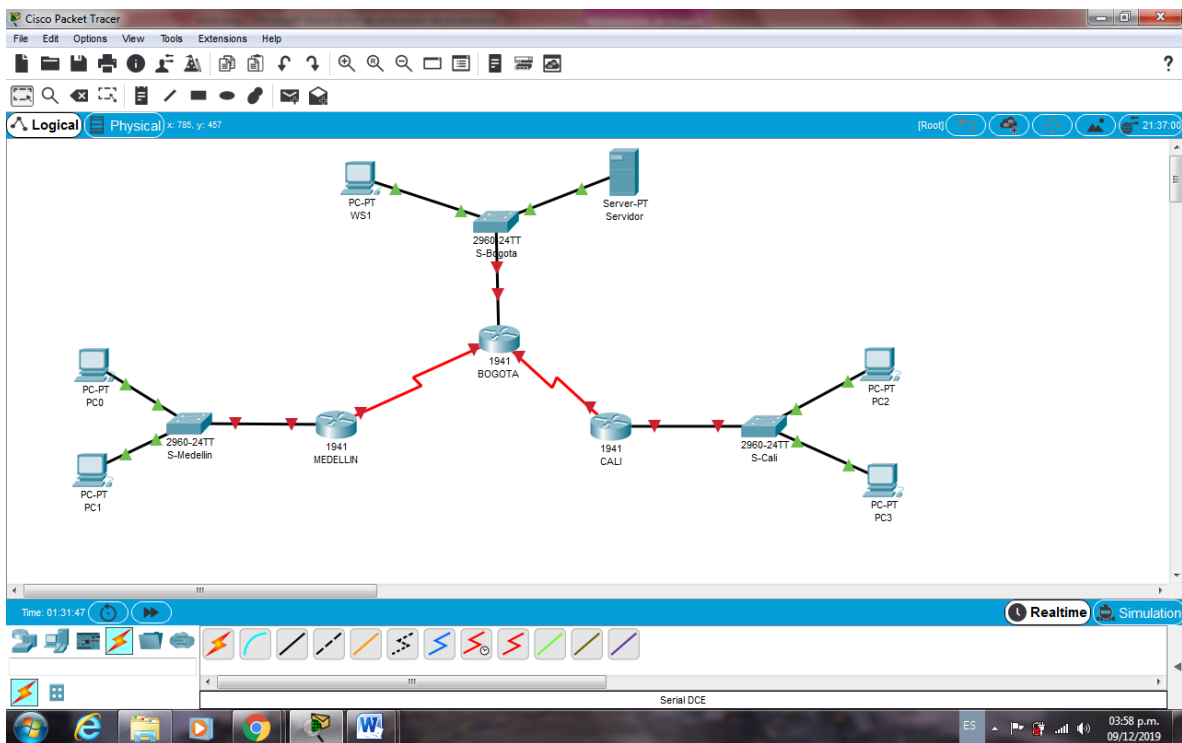

Figura 2. Conexión Física de los equipos con base en la Topología de Red

1.4. Parte 1. Asignación de direcciones IP.

- a. Se debe dividir (subnetear) la red creando una segmentación en ocho partes, para permitir crecimiento futuro de la red corporativa.
- b. Asignar una dirección IP a la red.

Tabla 1		
Nombre de Subred	Dirección de Red	Máscara de Subred
Bogota LAN	192.168.1.0	255.255.255.224
Medellín LAN	192.168.1.32	255.255.255.224
Cali LAN	192.168.1.64	255.255.255.224
Bogota Medellín	192.168.1.96	255.255.255.224
Bogota Cali	192.168.1.128	255.255.255.224
Proxima	192.168.1.160	255.255.255.224
Proxima	192.168.1.192	255.255.255.224
Proxima	192.168.1.224	255.255.255.224

1.5. Parte 2. Configuración básica.

a. Completar la siguiente tabla con la configuración básica de los routers, teniendo en cuenta las subredes diseñadas.

Tabla 2			
	R1	R2	R3
Nombre de Host	MEDELLIN	BOGOTA	CALI
Dirección de Ip en interfaz Serial 0/0	192.168.1.99	192.168.1.98	192.168.1.131
Dirección de Ip en interfaz Serial 0/1		192.168.1.130	
Dirección de Ip en interfaz FA 0/0	192.168.1.33	192.168.1.1	192.168.1.65
Protocolo de enrutamiento	Eigrp	Eigrp	Eigrp
Sistema Autónomo	200	200	200
Afirmaciones de red	192.168.1.0	192.168.1.0	192.168.1.0

Configuración Router – Bogotá

1.7. Parte 4: Configuración de las listas de Control de Acceso.

En este momento cualquier usuario de la red tiene acceso a todos sus dispositivos y estaciones de trabajo. El jefe de redes le solicita implementar seguridad en la red. Para esta labor se decide configurar listas de control de acceso (ACL) a los routers.

Las condiciones para crear las ACL son las siguientes:

a. Cada router debe estar habilitado para establecer conexiones Telnet con los demás routers y tener acceso a cualquier dispositivo en la red.

```
Router>enable
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname BOGOTA
BOGOTA(config)#no ip domain-lookup
BOGOTA(config)#service password-encryption
BOGOTA(config)#enable secret class
BOGOTA(config)#banner motd #
Enter TEXT message. End with the character '#'.
Acceso restringido.#
BOGOTA(config)#line console 0

2. ESCENARIO 2

Una empresa tiene la conexión a internet en una red Ethernet, lo cual deben adaptarlo para facilitar que sus routers y las redes que incluyen puedan, por esa vía, conectarse a internet, pero empleando las direcciones de la red LAN original.

Desarrollo

Los siguientes son los requerimientos necesarios:

2.1. Todos los routers deberán tener lo siguiente:

- Configuración básica.

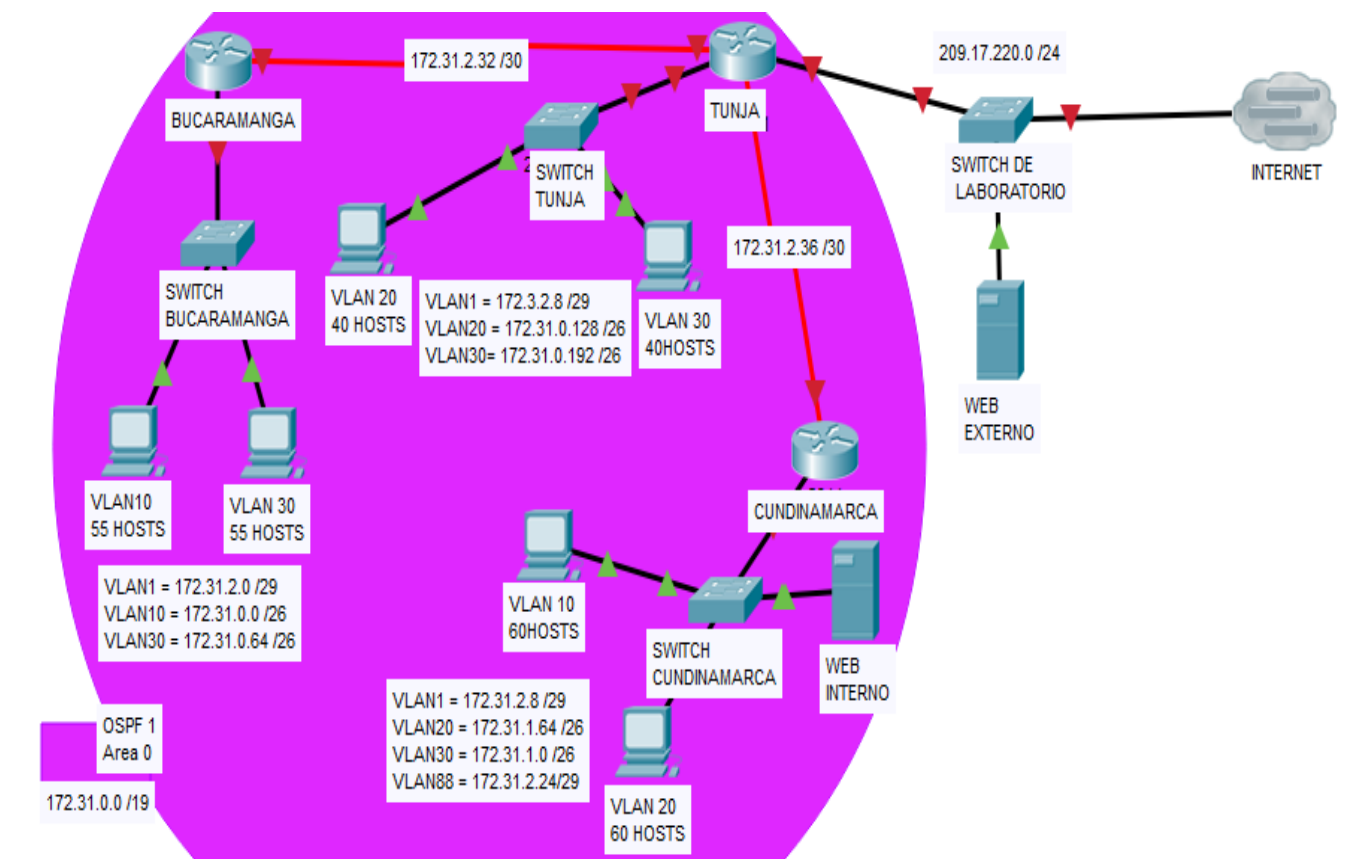

Figura 36. Modelo Topología Escenario 2

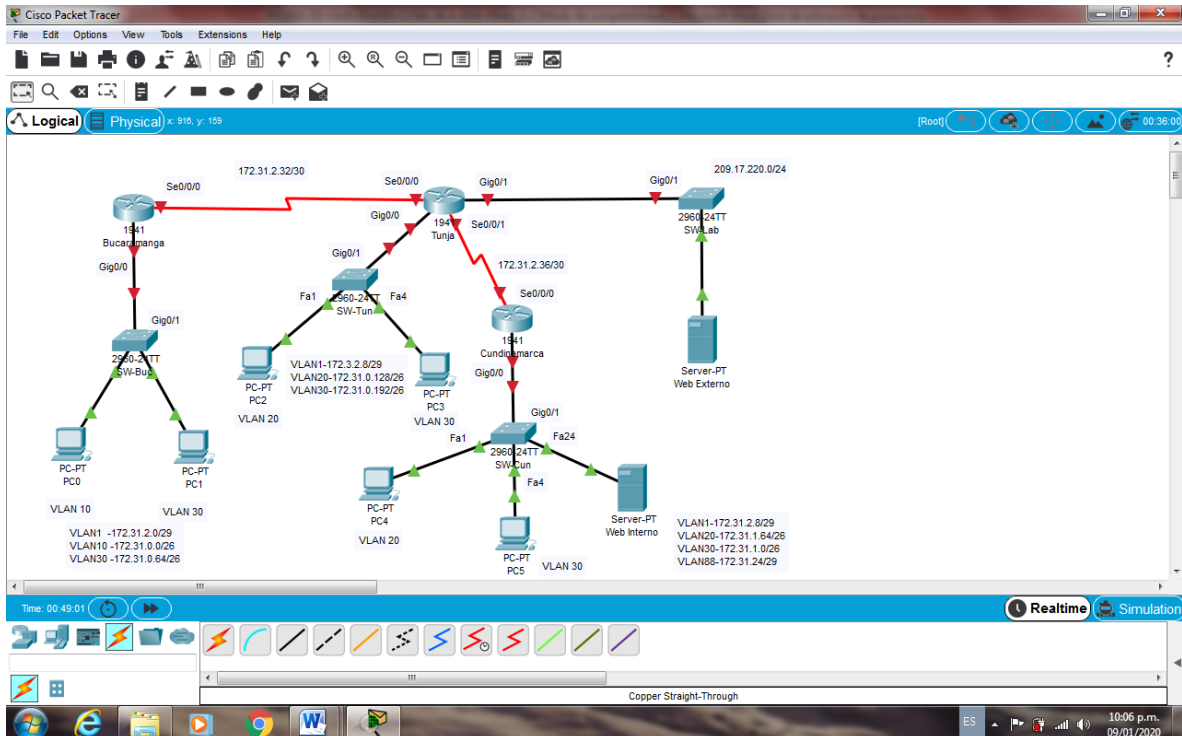

Figura 37. Topología Escenario 2

```

The screenshot displays the Cisco Packet Tracer interface. On the left, a network diagram shows a central switch (SW-Bus) connected to a router (Bucaramanga) and two PCs (PC0 and PC1). The router is connected to another switch (SW-Tun) which is connected to PC2. The command prompt window on the right shows a ping command being executed from PC0 to the server IP 209.165.220.2.

```

Packet Tracer PC Command Line 1.0
C:\>ping 209.165.220.2

Pinging 209.165.220.2 with 32 bytes of data:

Request timed out.
Reply from 209.165.220.2: bytes=32 time=14ms TTL=126
Reply from 209.165.220.2: bytes=32 time=12ms TTL=126
Reply from 209.165.220.2: bytes=32 time=17ms TTL=126

Ping statistics for 209.165.220.2:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 12ms, Maximum = 17ms, Average = 14ms

Figura 72. Comprobación VLAN administrativas y de la VLAN de servidores tienen acceso a los routers e internet (SW-Buc a Tunja) Exitó

2.6. VLSM: utilizar la dirección 172.31.0.0 /18 para el direccionamiento.

Aspectos a tener en cuenta

- Habilitar VLAN en cada switch y permitir su enrutamiento.
- Enrutamiento OSPF con autenticación en cada router.
- Servicio DHCP en el router Tunja, mediante el helper address, para los routers Bucaramanga y Cundinamarca.
- Configuración de NAT estático y de sobrecarga.
- Establecer una lista de control de acceso de acuerdo con los criterios señalados.
- Habilitar las opciones en puerto consola y terminal virtual

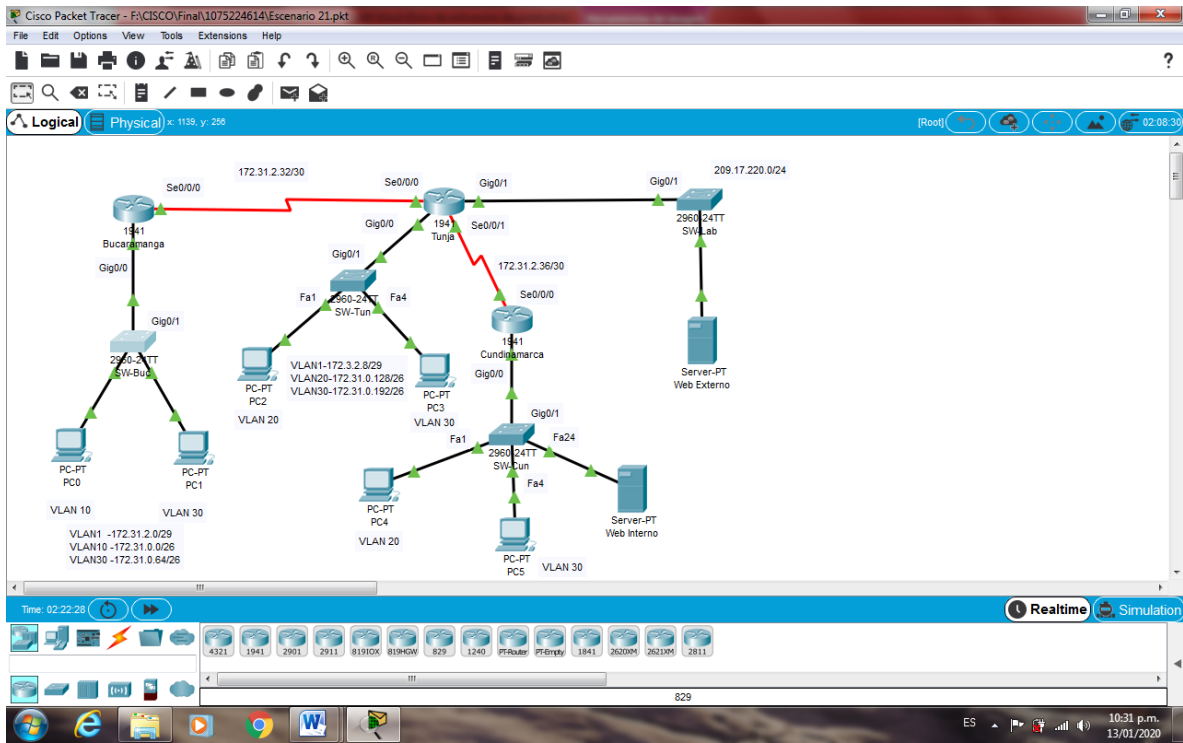

Figura 73. Tipología Escenario 2 completo

CONCLUSIONES

- El desarrollo del presente trabajo permitió poner en práctica el conocimiento y habilidades adquiridas en el Diplomado de Profundización CCNA para la configuración e interconexión entre sí cada uno de los dispositivos que forman la estructura planteada en el primer y segundo escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.
- El desarrollo de las actividades propuestas durante el Diplomado de Profundización CCNA, fue una base para poder desarrollar el presente trabajo final y experiencia satisfactoria de poder culminar con éxito el diplomado.
- Como profesionales, tenemos la capacidad de diseñar y construir una red que satisfaga las necesidades del cliente.
- Hemos sido gestor de nuestro propio conocimiento y aprendizaje, el poder trabajar colaborativamente y recibir siempre retroalimentación del Tutor, para corregir errores y despejar dudas.
