AGRADECIMIENTOS

Quiero dar las gracias a mi familia por alentarme siempre a continuar en este largo proceso de preparación académica, por enseñarme a creer en mí y en mis fortalezas, especialmente a mí madre y a mi pareja por sus palabras de aliento y motivación, a la universidad por abrir estos espacios del conocimiento que nos permite fortalecernos aún más en nuestra formación profesional y finalmente a la red de docentes y tutores, quienes estuvieron presentes para brinda su apoyo y colaboración.

GLOSARIO

ASN: Autonomous System Number, es un grupo de redes de direcciones IP que es gestionado por los operadores con políticas de ruteo (Lacnic, s.f.)

BGP: Es un protocolo escalable de dynamic routing usado en la Internet por grupos de enrutadores para compartir información de enrutamiento. BGP usa parámetros de ruta o atributos para definir políticas de enrutamiento y crear un entorno de enrutamiento estable (Fireware Help, s.f.)

DHCP: El Protocolo de configuración dinámica de host (DHCP) es un protocolo cliente/servidor que proporciona automáticamente un host de Protocolo de Internet (IP) con su dirección IP y otra información de configuración relacionada, como la máscara de subred y la puerta de enlace predeterminada (Microsfot, 2022)

HSRP: (Hot Standby Router Protocol) es un protocolo de Cisco y uno de los FHRP (First Hop Redundancy Protocol) que se encarga de proveer redundancia en la red (Capa 3), es normalmente usado en los gateway, justo antes de la WAN, o incluso en la WAN del lado del proveedor hacia nuestro router(s) (Estudiaredes, 2022)

LACP: La agregación virtual de enlaces, también llamada trunking, es una característica de nivel 2, que une puertos físicos de la red en un único enlace de datos de gran ancho de banda; de este modo se aumenta la capacidad de ancho de banda y se crean enlaces redundantes y de alta disponibilidad (D-Link, 2020)

OSPF: Open Shortest Path First (OSPF) es un protocolo de direccionamiento de tipo enlace-estado, desarrollado para las redes IP y basado en el algoritmo de primera vía más corta (SPF). OSPF es un protocolo de pasarela interior (IGP) (IBM, 2021)

RSTP: RSTP es el protocolo que previene loops en una red de switches. Éste suplanta a su antecesor; el protocolo STP. RSTP trae consigo varias mejoras respecto a STP, principalmente en lo que tiene que ver a los tiempos de convergencia (ccnadesdecero, 2022)

VLAN: también conocidas como redes de área local virtuales, es una tecnología de redes que nos permite crear redes lógicas independientes dentro de la misma red física (Redeszone, 2022)

RESUMEN

Por medio del desarrollo del presente trabajo se demostrarán todos los conocimientos adquiridos a lo largo del diplomado de profundización como opción de grado para la ingeniería en telecomunicaciones y electrónica, aplicando las habilidades prácticas en CCNP bajo cierto escenario planteado, dejando en evidencia las configuraciones requeridas para poder conectar las redes preestablecidas, implementando métodos de seguridad y protocolos de conexión que actualmente se utilizan de manera estándar. Todo el proceso de implementación y configuración se realizará mediante el software GNS3, el cual permite realizar simulaciones de red con todas sus funciones y características, haciendo posible configurar plataformas de commutación basadas en switches, mediante el uso de protocolos como STP y la configuración de VLANs, también permite usar comandos IOS para la configuración avanzada en routers (con direccionamiento IPv4 e IPv6) para protocolos de enrutamiento como: OSPF, EIGRP y BGP, en entornos de direccionamiento sin clase, con el fin diseñar e implementar soluciones de red escalables, mediante el uso de los principios de enrutamiento y commutación de paquetes en ambientes LAN y WAN.

Palabras clave: CISCO, CCNP, Comutación, Enrutamiento, Redes, Electrónica.

ABSTRACT

Through the development of this work, all the knowledge acquired throughout the deepening diploma course will be demonstrated as a degree option for telecommunications and electronics engineering, applying the practical skills in CCNP under a certain scenario, revealing the configurations required for being able to connect pre-established networks, implementing security methods and connection protocols that are currently used as standard. The entire implementation and configuration process will be carried out using the GNS3 software, which allows network simulations to be carried out with all its functions and characteristics, making it possible to configure switching platforms based on switches, through the use of protocols such as STP and the configuration of VLANs., also allows the use of IOS commands for advanced configuration in routers (with IPv4 and IPv6 addressing) for routing protocols such as: OSPF, EIGRP and BGP, in classless addressing environments, in order to design and implement scalable network solutions, through the use of routing and packet switching principles in LAN and WAN environments.

Keywords: CCNP, Switching, Routing, Networking, Electronics.

INTRODUCCIÓN

Debido al crecimiento del uso sistematizado de las comunicaciones y la información que se presenta tanto en organizaciones como consumidor en general, se ha hecho necesario implementar tecnologías que puedan gestionar y procesar toda esta información. Por lo que se implementan redes de todas las clases, dependiendo de las necesidades particulares de cada uno de los usuarios.

Lo cual exige que las personas estén capacitadas para diseñar, implementar, configurar y gestionar estos sistemas de información, para los cuales la Universidad Nacional Abierta y a Distancia, a través de este diplomado de profundización CISCO CCNP, permite la obtención de dichas habilidades y competencias mediante el uso de herramientas de simulación, protocolos de administración de redes para la solución de problemas, evaluación de desempeños de routers y switches, entre otras cosas.

Por ende, se desarrolló un proyecto aplicado que consiste en un diseño de red específico, sobre el cual se irá realizando su configuración paso a paso con su respectiva evidencia de la configuración de cada uno de los dispositivos, de los comandos utilizados para la implementación de protocolos y uso del software GNS3. Dando cumplimiento a cada uno de los puntos solicitados a lo largo de su desarrollo.

DESARROLLO

Tabla 1 - Tabla de direccionamiento

Objetivos

Parte 1: Construir la red y configurar los ajustes básicos de cada dispositivo y el direccionamiento de las interfaces

Parte 2: Configurar la capa 2 de la red y el soporte de Host

Escenario

En esta prueba de habilidades, debe completar la configuración de la red para que haya una accesibilidad completa de un extremo a otro, para que los hosts tengan un soporte confiable de la puerta de enlace predeterminada (default Gateway) y para que los protocolos configurados estén operativos dentro de la parte

correspondiente a la "Red de la Compañía" en la topología. Tenga presente verificar que las configuraciones cumplan con las especificaciones proporcionadas y que los dispositivos funcionen como se requiere.

Nota: Los routers usados son Cisco 4221 con CISCO IOS XE versión 16.9.4 (imagen universalk9). Los switches usados son Cisco Catalyst 3650 con Cisco IOS XE versión 16.9.4 (imagen universalk9) y Cisco Catalyst 2960 con Cisco IOS versión 15.2(2) (imagen lanbasek9). Se pueden usar otras versiones de switches, routers y Cisco IOS. Dependiendo del modelo y la versión de Cisco IOS, los comandos disponibles y el resultado producido pueden variar de lo que se muestra en las prácticas de laboratorio.

Nota: Asegúrese de que los commutadores se hayan borrado y no tengan configuraciones de inicio. Si no está seguro, póngase en contacto con su instructor.

Recursos necesarios

- 3 Routers (Cisco 7200).
- 3 Switches (Cisco IOU L2).
- 4 PC (Utilice las VPCS del GNS3)
- Después de la configuración de los dispositivos en GNS3, las ranuras de los adaptadores de red del SW deben configurarse de la siguiente manera:

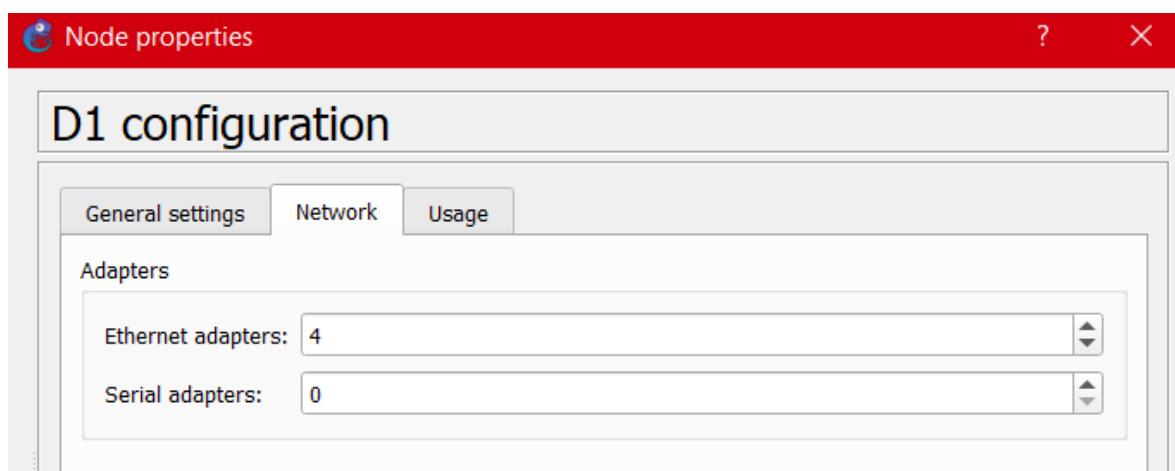

Figura 2. Configuración adaptador Ethernet SW.

Y de los Routers así:

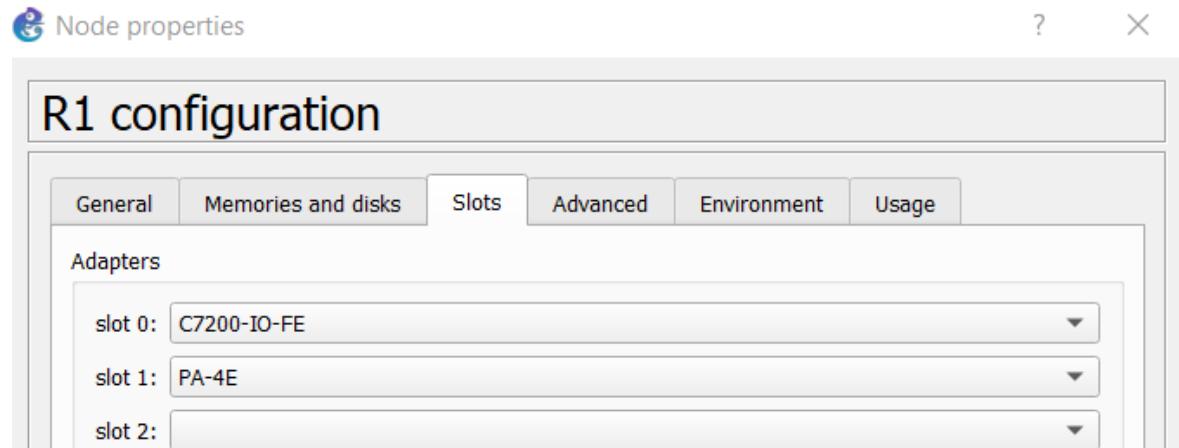

Figura 3. Configuración adaptador Ethernet RTS.

Parte 1: construir la red y configurar los parámetros básicos de los dispositivos y el direccionamiento de las interfaces

En la Parte 1, configurará la topología de red y configurará los ajustes básicos y el direccionamiento de la interfaz

Paso 1: Cablear la red como se muestra en la topología.

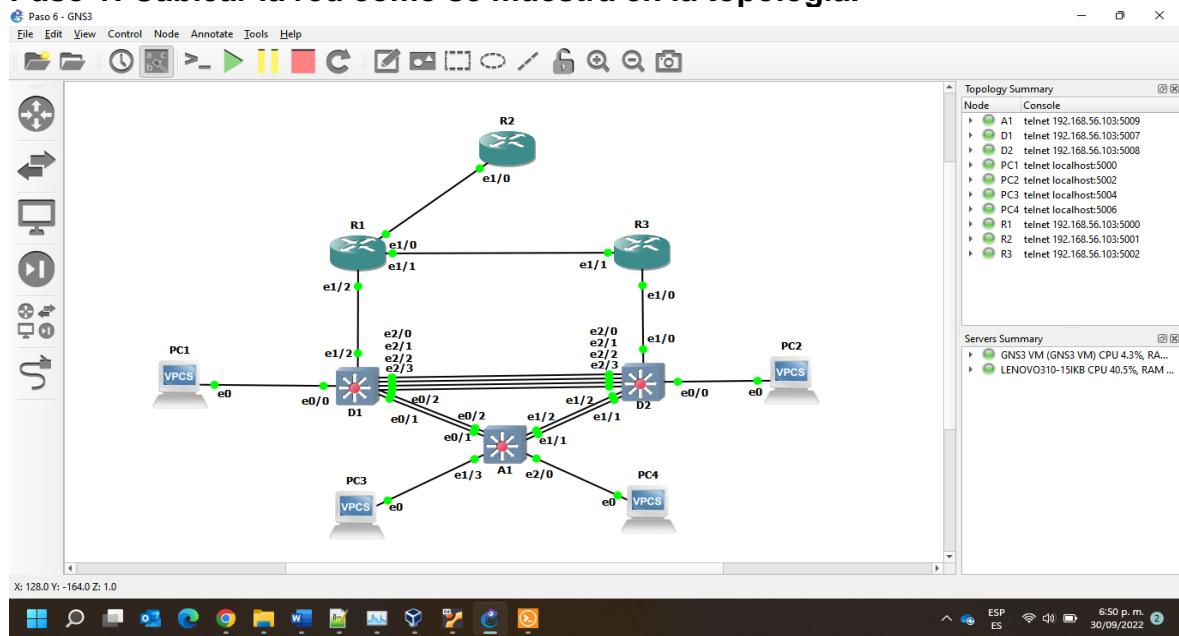

Figura 4. Topología y cableado.

Paso 2: Configurar los parámetros básicos para cada dispositivo

- a. Conecte la consola a cada dispositivo, entre en el modo de configuración global y aplique la configuración básica. Las configuraciones de inicio para cada dispositivo se proporcionan a continuación.

Figura 6. Guardado de configuración en SW.

- Configure el direccionamiento de host de PC 1 y PC 4 como se muestra en la tabla de direcciones. Asigne una dirección de puerta de enlace predeterminada de 10.XY.100.254, que será la dirección IP virtual HSRP utilizada en la Parte 4.

NAME	IP/MASK	GATEWAY	MAC	LPORT	RHOST:PORT
PC1	10.57.100.5/24 fe80::250:79ff:fe66:6800/64 2001:db8:100:100:2050:79ff:fe66:6800/64 eui-64	10.57.100.254	00:50:79:66:68:00	10004	127.0.0.1:10005

NAME	IP/MASK	GATEWAY	MAC	LPORT	RHOST:PORT
PC4	10.57.100.6/24 fe80::250:79ff:fe66:6803/64 2001:db8:100:100:2050:79ff:fe66:6803/64 eui-64	10.57.100.254	00:50:79:66:68:03	10006	127.0.0.1:10007

Figura 7. Direccionamiento de host de PC 1 y PC 4

Parte 2: configurar la capa 2 de la red y el soporte de host

En esta parte de la Evaluación de habilidades, completará la configuración de red de capa 2 y establecerá el soporte básico de host. Al final de esta parte, todos los interruptores deben poder comunicarse. PC2 y PC3 deben recibir direcciones de DHCP y SLAAC.

Las tareas de configuración son las siguientes:

Tarea 1: Configurar las interfaces troncales

Switch D1:

```
interface range e2/0-3
switchport trunk encapsulation dot1q
switchport mode trunk

interface range e0/1-2
switchport trunk encapsulation dot1q
switchport mode trunk
```

Switch D2:

```
interface range e2/0-3
switchport trunk encapsulation dot1q
switchport mode trunk

interface range e1/1-2
switchport trunk encapsulation dot1q
switchport mode trunk
```

Switch A1:

```
interface range e0/1-2
switchport trunk encapsulation dot1q
switchport mode trunk

interface range e1/1-2
switchport trunk encapsulation dot1q
switchport mode trunk
```

Tarea 2: Configurar la VLAN 99 como nativa:

Switch D1:

```
interface range e2/0-3
switchport trunk native vlan 999

interface range e0/1-2
switchport trunk native vlan 999
```

The screenshot shows a network management interface with a tab labeled 'Overview' and a device selection dropdown showing 'D1'. The main area displays the output of the command 'D1#Show interfaces trunk'. The output details the configuration of two ports, Po1 and Po12, as trunk ports. Both ports are set to mode 'on' and encapsulation '802.1q'. They are assigned to Native VLAN 999. The allowed VLAN ranges on both ports are 1-4094. Additionally, the VLANs allowed and active in the management domain for both ports are listed as 1,100-102,999. The final section shows the VLANs in spanning tree forwarding state and not pruned, which are also 1,100-102,999.

Port	Mode	Encapsulation	Status	Native vlan
Po1	on	802.1q	trunking	999
Po12	on	802.1q	trunking	999

Port	Vlans allowed on trunk
Po1	1-4094
Po12	1-4094

Port	Vlans allowed and active in management domain
Po1	1,100-102,999
Po12	1,100-102,999

Port	Vlans in spanning tree forwarding state and not pruned
Po1	1,100-102,999
Po12	1,100-102,999

Figura 8. Configuración Tarea 1 y 2 en SW D1

Switch D2:

```
interface range e2/0-3
switchport trunk native vlan 999

interface range e1/1-2
switchport trunk native vlan 999
```

The screenshot shows a network management interface with a dark theme. At the top, there's a header bar with the title "Overview" on the left, a blue circular icon with "D2" in the center, and a close button ("X") and a plus sign button on the right. The main area contains the following configuration output:

```
D2#Show interfaces trunk

Port      Mode          Encapsulation  Status       Native vlan
Po2       on            802.1q         trunking    999
Po12      on            802.1q         trunking    999

Port      Vlans allowed on trunk
Po2       1-4094
Po12      1-4094

Port      Vlans allowed and active in management domain
Po2       1,100-102,999
Po12      1,100-102,999

Port      Vlans in spanning tree forwarding state and not pruned
Po2       1,100-102,999
Po12      1,100-102,999
D2#
```

Figura 9. Configuración Tarea 1 y 2 en SW D2

Switch A1:

```
interface range e0/1-2
switchport trunk native vlan 999

interface range e1/1-2
switchport trunk native vlan 999
```

```
Overview A1 × +  
A1#Show interfaces trunk  
  
Port      Mode          Encapsulation  Status      Native vlan  
Po1       on           802.1q        trunking    999  
Po2       on           802.1q        trunking    999

Po1       1,100-102,999  
Po2       1,100-102,999  
  
Port      Vlans in spanning tree forwarding state and not pruned  
Po1       1,100,102,999  
Po2       101
```

Figura 10. Configuración Tarea 1 y 2 en SW A1

Tarea 3: Habilitar protocolo Rapid Spanning-Tree (RSTP).

Switch D1:

```
spanning-tree mode rapid-pvst
```

Switch D2:

```
spanning-tree mode rapid-pvst
```

Switch A1:

```
spanning-tree mode rapid-pvst
```

```
A1#show run | include spanning-tree
spanning-tree mode rapid-pvst
spanning-tree extend system-id
spanning-tree portfast edge
spanning-tree portfast edge
```

Figura 11. Protocolo Rapid Spanning-Tree SW A1

Tarea 4: Configurar los puentes raíz (root bridges)

Switch D1:

```
spanning-tree vlan 100, 102 root primary
spanning-tree vlan 101 root secondary
```

```
D1#show run | include spanning-tree
spanning-tree mode rapid-pvst
spanning-tree extend system-id
spanning-tree vlan 100,102 priority 24576
spanning-tree vlan 101 priority 28672
spanning-tree portfast edge
```

Figura 12. Protocolo Rapid Spanning-Tree y root bridges SW D1

Switch D2:

```
spanning-tree vlan 101 root primary
spanning-tree vlan 100, 102 root secondary
```

```
D2#show run | include spanning-tree
spanning-tree mode rapid-pvst
spanning-tree extend system-id
spanning-tree vlan 100,102 priority 28672
spanning-tree vlan 101 priority 24576
spanning-tree portfast edge
```

Figura 13. Protocolo Rapid Spanning-Tree y root bridges SW D2

Tarea 5: crear los LACP.

Switch D1:

```
interface range e2/0-3
channel-group 12 mode active
no shutdown
exit
```

```
interface range e0/1-2
channel-group 1 mode active
no shutdown
exit
```

The screenshot shows a network management interface with a title bar "Overview" and a switch identifier "D1". The main area displays the output of the command "D1#show etherchannel". The output details two channel groups: Group 1 and Group 12. Both groups are in L2 state, have 4 ports, and a maximum of 4 port-channels. The protocol used is LACP, and the minimum links required are 0. The interface uses a dark theme with yellow text for the command output.

```
D1#show etherchannel
    Channel-group listing:
    -----
Group: 1
-----
Group state = L2
Ports: 2 Maxports = 4
Port-channels: 1 Max Port-channels = 4
Protocol: LACP
Minimum Links: 0

Group: 12
-----
Group state = L2
Ports: 4 Maxports = 4
Port-channels: 1 Max Port-channels = 4
Protocol: LACP
Minimum Links: 0
```

Figura 14. Protocolo LACP y Port-Channel SW D1

Switch D2:

```
interface range e2/0-3
channel-group 12 mode active
no shutdown
exit
```

```
interface range e1/1-2
channel-group 2 mode active
no shutdown
exit
```

The screenshot shows a terminal window with two tabs at the top: 'D1' (selected) and 'D2'. The 'D2' tab is active, displaying the output of the command 'show etherchannel'. The output shows two channel groups: Group 2 and Group 12. Both groups are in L2 state, have 2 ports, and a maximum of 4 ports. They both have 1 port-channel, a maximum of 4 port-channels, and use the LACP protocol. The minimum links required are 0.

```
D2#show etherchannel
    Channel-group listing:
    -----
Group: 2
-----
Group state = L2
Ports: 2  Maxports = 4
Port-channels: 1 Max Port-channels = 4
Protocol:  LACP
Minimum Links: 0

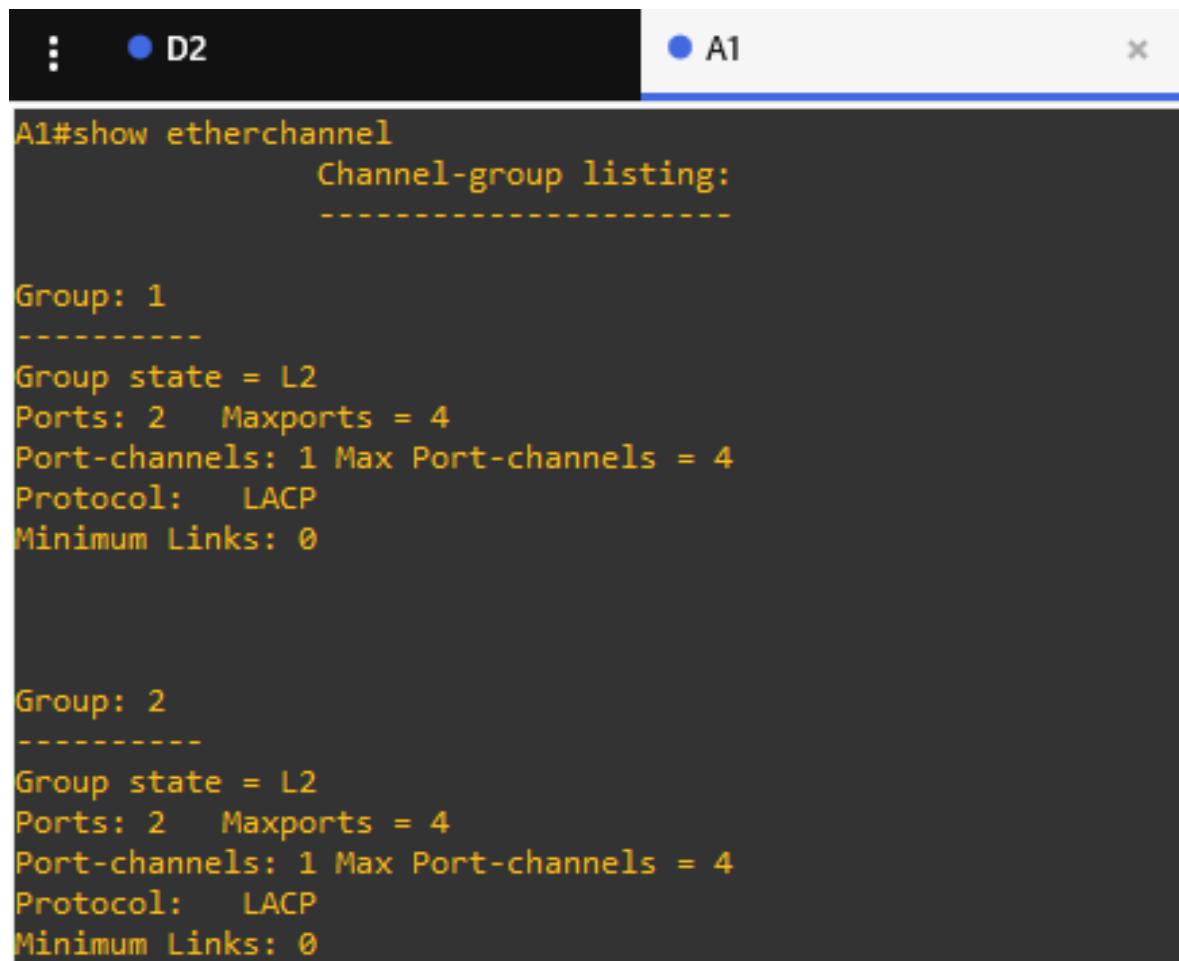

Group: 12
-----
Group state = L2
Ports: 4  Maxports = 4
Port-channels: 1 Max Port-channels = 4
Protocol:  LACP
Minimum Links: 0
```

Figura 15. Protocolo LACP y Port-Channel SW D2

Switch A1:

```
interface range e0/1-2
channel-group 1 mode active
no shutdown
exit
```

```
interface range e1/1-2
channel-group 2 mode active
no shutdown
exit
```

The screenshot shows a terminal window with two tabs at the top: 'D2' (selected) and 'A1'. The 'A1' tab is active, displaying the output of the command 'show etherchannel'. The output shows two channel groups, Group 1 and Group 2, both in L2 state with 2 ports and a maximum of 4 ports. The protocol used is LACP, and the minimum links required are 0.

```
A1#show etherchannel
      Channel-group listing:
-----
Group: 1
-----
Group state = L2
Ports: 2  Maxports = 4
Port-channels: 1 Max Port-channels = 4
Protocol:  LACP
Minimum Links: 0

-----
Group: 2
-----
Group state = L2
Ports: 2  Maxports = 4
Port-channels: 1 Max Port-channels = 4
Protocol:  LACP
Minimum Links: 0
```

Figura 16. Protocolo LACP y Port-Channel SW A1

Tarea 6: Configurar los puertos de acceso a los PC.

Switch D1:

```
interface e0/0
switchport mode access
switchport access vlan 100
spanning-tree portfast
no shutdown
exit
```

The screenshot shows a software interface for managing network switches. At the top, there's a header bar with three dots on the left, the word "Overview" in the center, a blue circular icon with "D1" to its right, and a close button (an "X") on the far right. Below this is a dark grey content area containing the configuration command output. The output starts with "D1#show run int e0/0" followed by "Building configuration...". It then lists the current configuration for port e0/0, which includes setting it as an access port (switchport mode access), assigning it to VLAN 100 (switchport access vlan 100), enabling spanning tree portfast (spanning-tree portfast), and disabling shutdown (no shutdown). The command "end" concludes the configuration.

```
D1#show run int e0/0
Building configuration...

Current configuration : 110 bytes
!
interface Ethernet0/0
    switchport access vlan 100
    switchport mode access
    spanning-tree portfast edge
end
```

Figura 17. Puertos de acceso D1

Switch D2:

```
interface e0/0
switchport mode access
switchport access vlan 102
spanning-tree portfast
no shutdown
exit
```

D2#show run int e0/0
Building configuration...

Current configuration : 110 bytes
!
interface Ethernet0/0
switchport access vlan 102
switchport mode access
spanning-tree portfast edge
end

Figura 18. Puertos de acceso D2

Switch A1:

```
interface e1/3
switchport mode access
switchport access vlan 101
spanning-tree portfast
no shutdown
exit

interface e2/0
switchport mode access
switchport access vlan 100
spanning-tree portfast
no shutdown
exit
```

The image shows two separate terminal windows, both titled "Overview" and labeled "A1". Each window displays the output of the command "show run int <interface>".

Top Window (Interface e1/3):

```
A1#show run int e1/3
Building configuration...
Current configuration : 110 bytes
!
interface Ethernet1/3
  switchport access vlan 101
  switchport mode access
  spanning-tree portfast edge
end
```

Bottom Window (Interface e2/0):

```
A1#show run int e2/0
Building configuration...
Current configuration : 110 bytes
!
interface Ethernet2/0
  switchport access vlan 100
  switchport mode access
  spanning-tree portfast edge
end
```

Figura 19. Puertos de acceso A1

Tarea 7: Verificar los PC en DHCP:

The screenshot shows three terminal windows side-by-side. The top window is titled 'PC1' and displays the command 'sh' followed by a table of network interface information. The middle window is titled 'PC2' and also displays the command 'sh' followed by a similar table. The bottom window is titled 'PC3' and displays the command 'sh' followed by another table. All three tables show the same columns: NAME, IP/MASK, GATEWAY, MAC, LPORT, and RHOST:PORT.

NAME	IP/MASK	GATEWAY	MAC	LPORT	RHOST:PORT
PC2	10.57.102.3/24	10.57.102.254	00:50:79:66:68:01	10008	127.0.0.1:10009
	fe80::250:79ff:fe66:6801/64

```

Figura 24. Ping en PC 4

Parte 3: Configurar protocolos de enrutamiento

En esta parte, configurará los protocolos de enrutamiento IPv4 e IPv6. Al final de esta parte, la red debe ser completamente convergente. Los pings IPv4 e IPv6 a la interfaz Loopback 0 desde D1 y D2 deberían realizarse correctamente.

Nota: Los pings de los hosts no se realizarán correctamente porque sus puertas de enlace predeterminadas apuntan a la dirección HSRP que se habilitará en la Parte 4.

Las tareas de configuración son las siguientes:

Tarea 1: En la "Red de la empresa" (es decir, R1, R3, D1 y D2), configure OSPFv2 de área única en el área 0.

Utilice OSPF Procesos ID 4 y asigne los siguientes ID de router:

- R1: 0.0.4.1

```
router ospf 4  
router-id 0.0.4.1
```

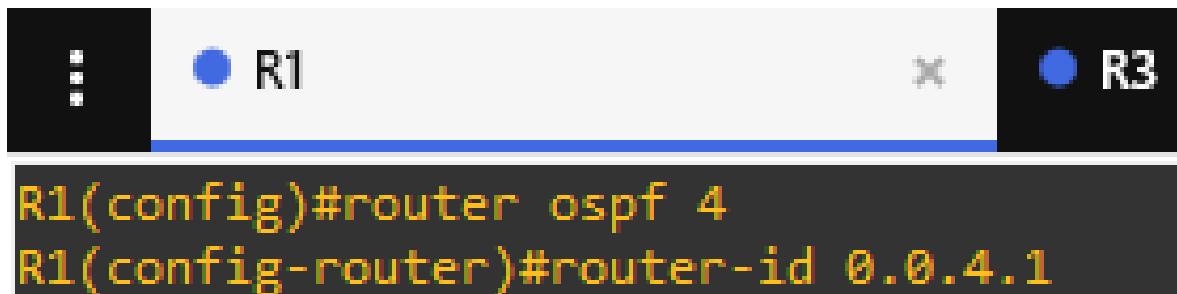

Figura 25. OSPF ID 4 en R1

- R3: 0.0.4.3

```
router ospf 4  
router-id 0.0.4.3
```

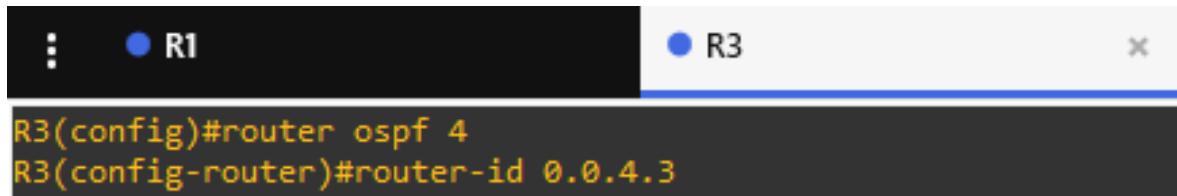

Figura 26. OSPF ID 4 en R3

- D1: 0.0.4.131

```
router ospf 4  
router-id 0.0.4.131
```

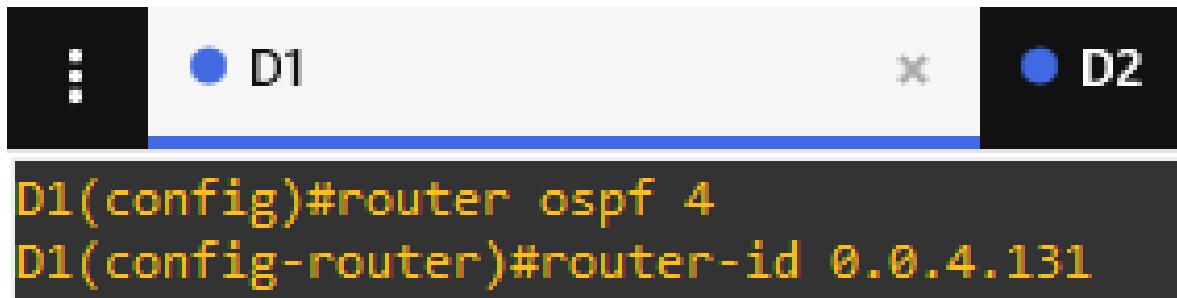

Figura 27. OSPF ID 4 en D1

- D2: 0.0.4.132

```

router ospf 4
router-id 0.0.4.132

```

```

D2(config)#router ospf 4
D2(config-router)#router-id 0.0.4.132

```

Figura 28. OSPF ID 4 en D2

En R1, R3, D1 y D2, anuncie todas las redes / VLAN conectadas directamente en el Área 0.

```

network 10.57.11.0 0.0.0.255 area 0
network 10.57.13.0 0.0.0.255 area 0

```

```

R3(config-router)#network 10.57.11.0 0.0.0.255 area 0
R3(config-router)#network 10.57.13.0 0.0.0.255 area 0
R3(config-router)#exit

```

D2(config-router)#network 10.57.102.0 0.0.0.255 area 0
D2(config-router)#network 10.57.11.0 0.0.0.255 area 0

```

Figura 31. Redes en D2

- En R1, no anuncie la red R1 – R2.

```

network 10.57.10.0 0.0.0.255 area 0
network 10.57.13.0 0.0.0.255 area 0

```

```

R1(config-router)#network 10.57.10.0 0.0.0.255 area 0
R1(config-router)#network 10.57.13.0 0.0.0.255 area 0

```

Figura 32. Redes en R1

- En R1, propague una ruta predeterminada. Tenga en cuenta que BGP proporcionará la ruta predeterminada.

```
default-information originate
```

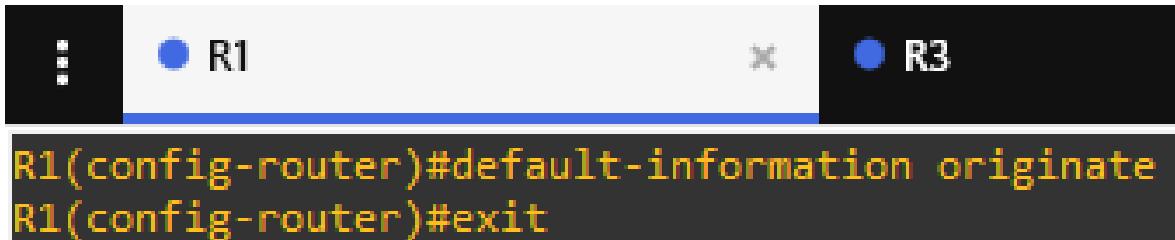

Figura 33. Predeterminada en R1

Desactive los anuncios de OSPF v2 en:

- D1: Todas las interfaces excepto E1/2

```
passive-interface default
no passive-interface e1/2
```

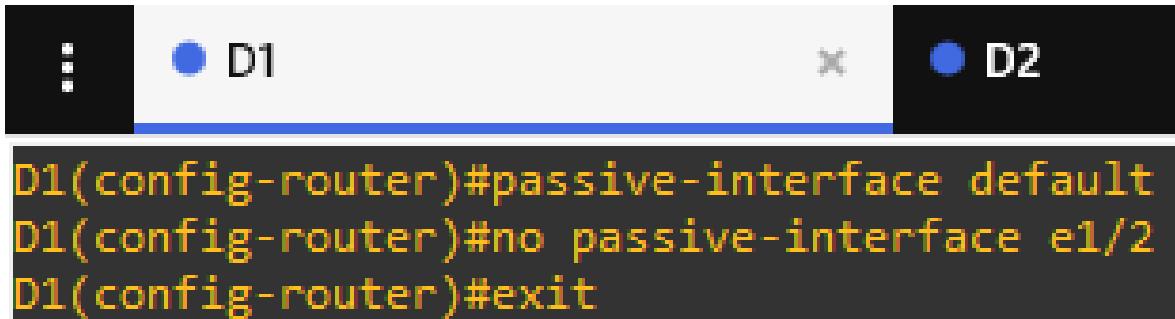

Figura 34. Desactivando anuncios OSPF en D1

- D2: Todas las interfaces excepto E1/0

```
passive-interface default
no passive-interface e1/0
```

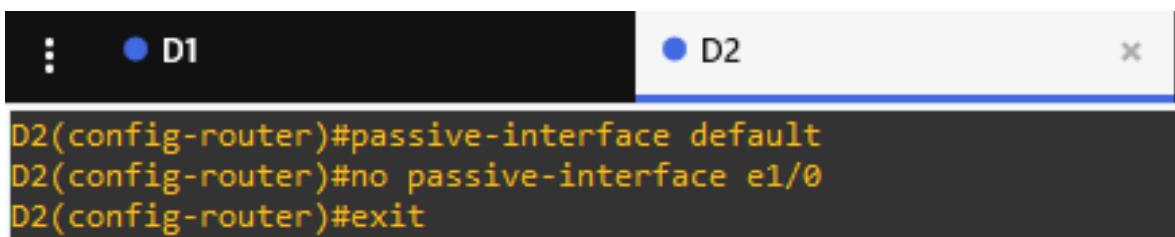

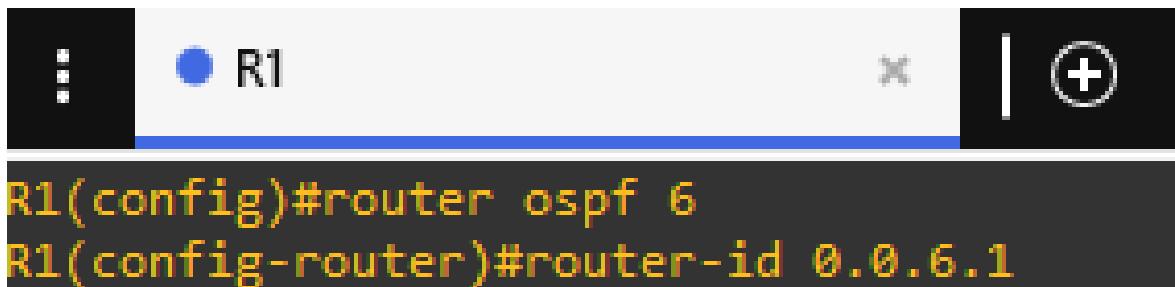

Figura 35. Desactivando anuncios OSPF en D2

Tarea 2: En la "Red de la empresa" (es decir, R1, R3, D1 y D2), configure OSPFv3 clásico de área única en el área 0.

Utilice OSPF Procesos ID 6 y asigne los siguientes ID de router:

- R1: 0.0.6.1

```
router ospf 6  
router-id 0.0.6.1
```

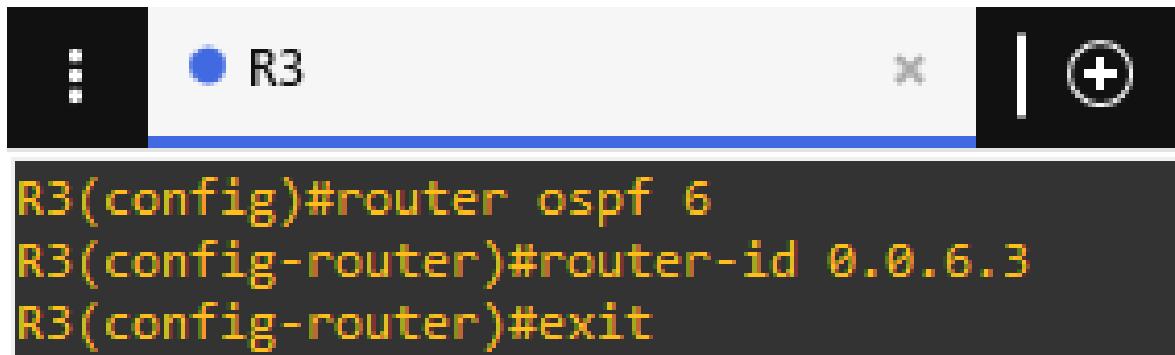

R1(config)#router ospf 6
R1(config-router)#router-id 0.0.6.1

Figura 36. OSPF ID 6 en R1

- R3: 0.0.6.3

```
router ospf 6  
router-id 0.0.6.3
```

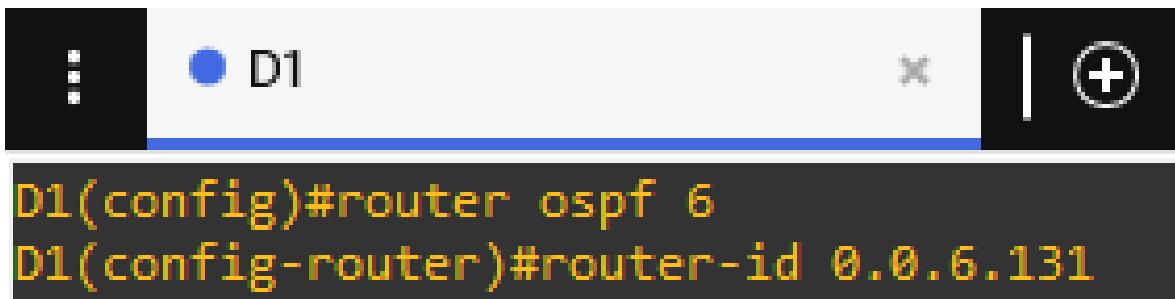

R3(config)#router ospf 6
R3(config-router)#router-id 0.0.6.3
R3(config-router)#exit

Figura 37. OSPF ID 6 en R3

- D1: 0.0.6.131

```
router ospf 6
router-id 0.0.6.131
```

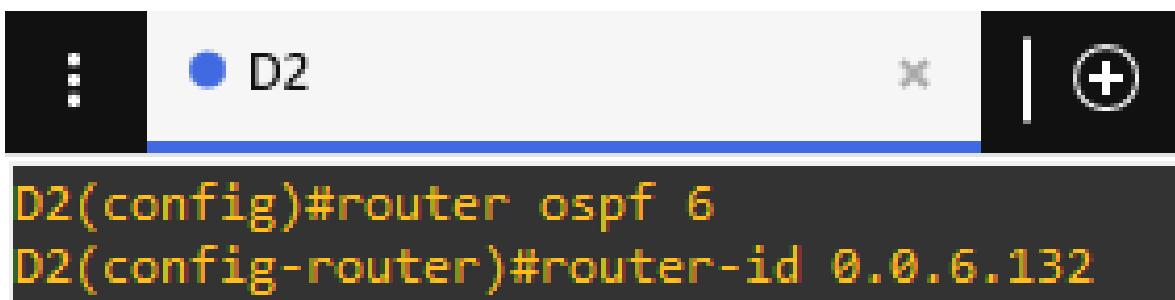

```
D1(config)#router ospf 6
D1(config-router)#router-id 0.0.6.131
```

Figura 38. OSPF ID 6 en D1

- D2: 0.0.6.132

```
router ospf 6
router-id 0.0.6.132
```

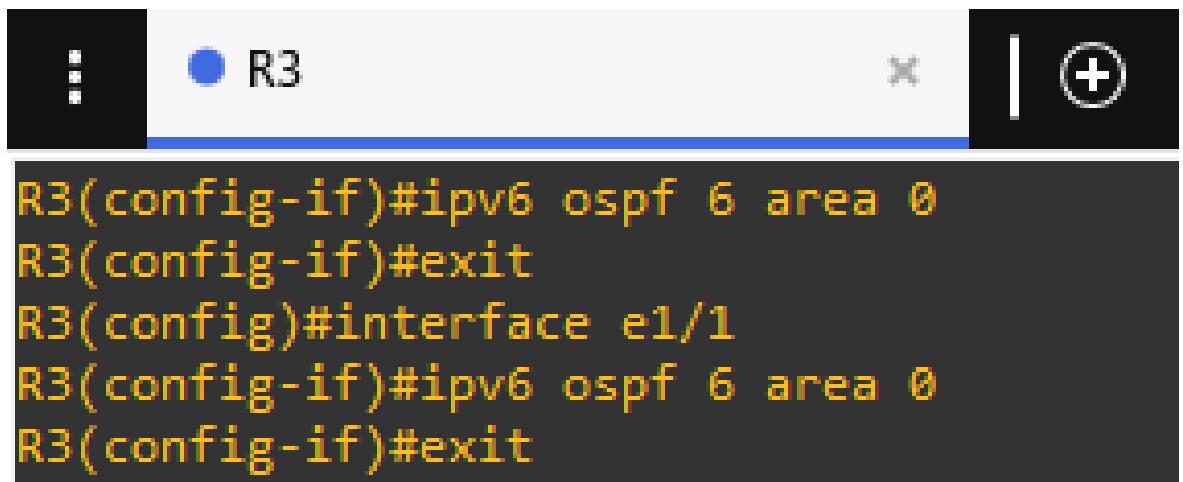

```
D2(config)#router ospf 6
D2(config-router)#router-id 0.0.6.132
```

Figura 39. OSPF ID 6 en D2

En R1, R3, D1 y D2, anuncie todas las redes / VLAN conectadas directamente en el Área 0.

```
interface e1/0
ipv6 ospf 6 area 0
exit
interface e1/1
ipv6 ospf 6 area 0
exit
```

R3(config-if)#ipv6 ospf 6 area 0
R3(config-if)#exit
R3(config)#interface e1/1
R3(config-if)#ipv6 ospf 6 area 0
R3(config-if)#exit

Figura 40. Redes en R3

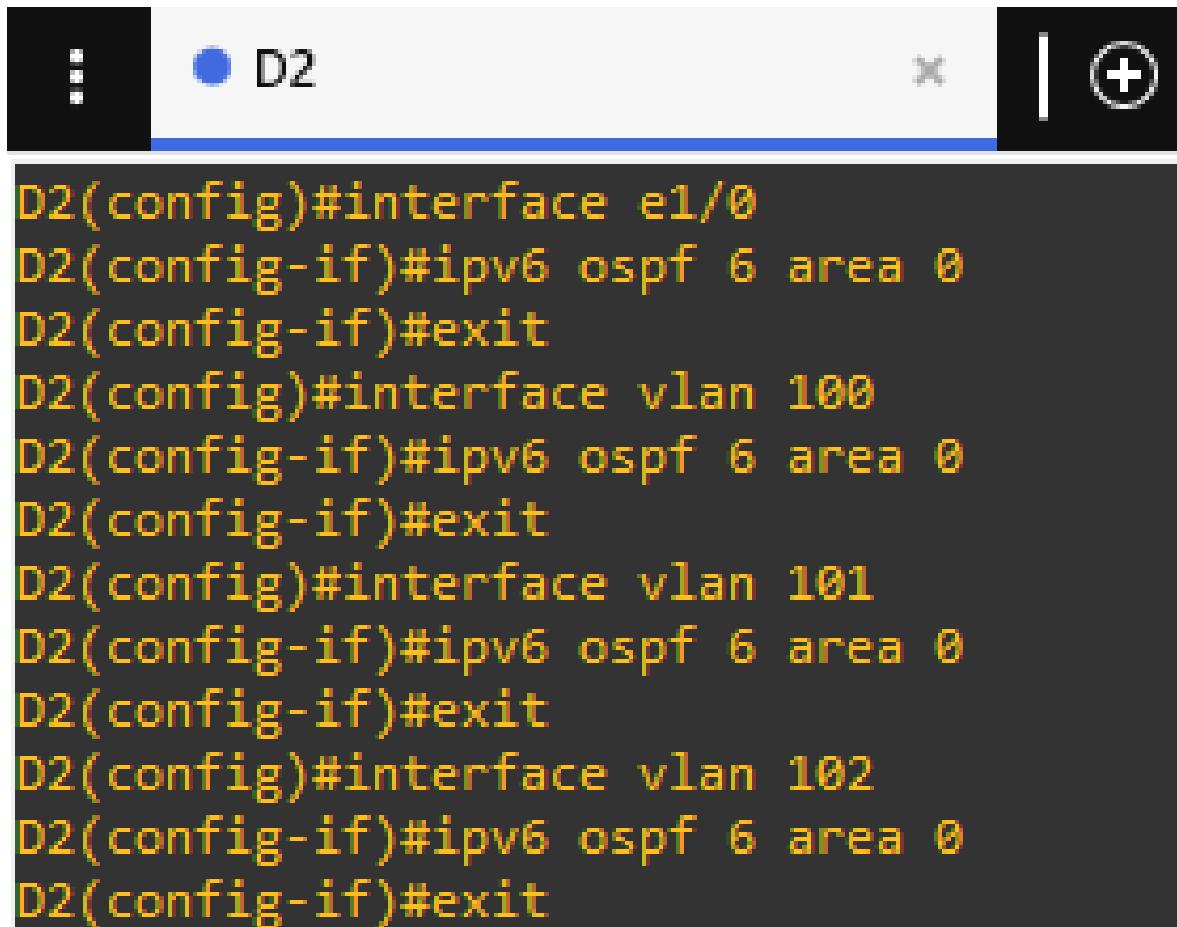

```
interface e1/2
  ipv6 ospf 6 area 0
  exit
interface vlan 100
  ipv6 ospf 6 area 0
  exit
interface vlan 101
  ipv6 ospf 6 area 0
  exit
interface vlan 102
  ipv6 ospf 6 area 0
  exit
```

The screenshot shows a terminal window with a dark background and light-colored text. At the top, there is a header bar with a black square containing three dots, a blue circle with the text "D1", a close button (X), and a plus sign button. The main area contains the following configuration commands:

```
D1(config-if)#exit
D1(config)#interface vlan 100
D1(config-if)#ipv6 ospf 6 area 0
D1(config-if)#exit
D1(config)#interface vlan 101
D1(config-if)#ipv6 ospf 6 area 0
D1(config-if)#exit
D1(config)#interface vlan 102
D1(config-if)#ipv6 ospf 6 area 0
D1(config-if)#exit
```

Figura 41. Redes en D1

```
interface e1/0
ipv6 ospf 6 area 0
exit
interface vlan 100
ipv6 ospf 6 area 0
exit
interface vlan 101
ipv6 ospf 6 area 0
exit
interface vlan 102
ipv6 ospf 6 area 0
exit
```

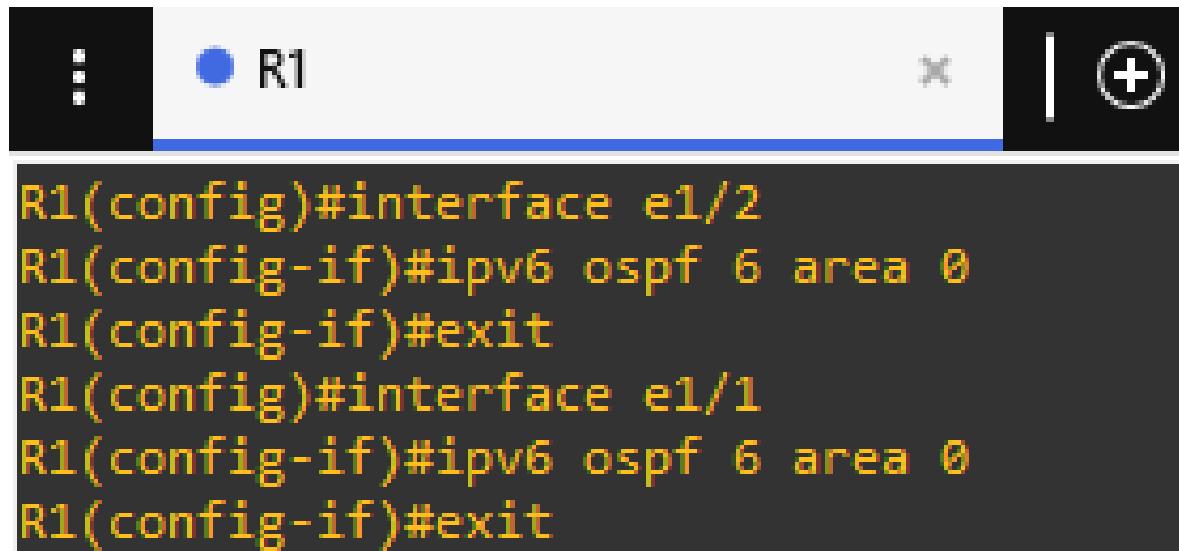

```
D2(config)#interface e1/0
D2(config-if)#ipv6 ospf 6 area 0
D2(config-if)#exit
D2(config)#interface vlan 100
D2(config-if)#ipv6 ospf 6 area 0
D2(config-if)#exit
D2(config)#interface vlan 101
D2(config-if)#ipv6 ospf 6 area 0
D2(config-if)#exit
D2(config)#interface vlan 102
D2(config-if)#ipv6 ospf 6 area 0
D2(config-if)#exit
```

Figura 42. Redes en D2

- En R1, no anuncie la red R1 – R2.

```
interface e1/2
ipv6 ospf 6 area 0
exit
interface e1/1
ipv6 ospf 6 area 0
exit
```

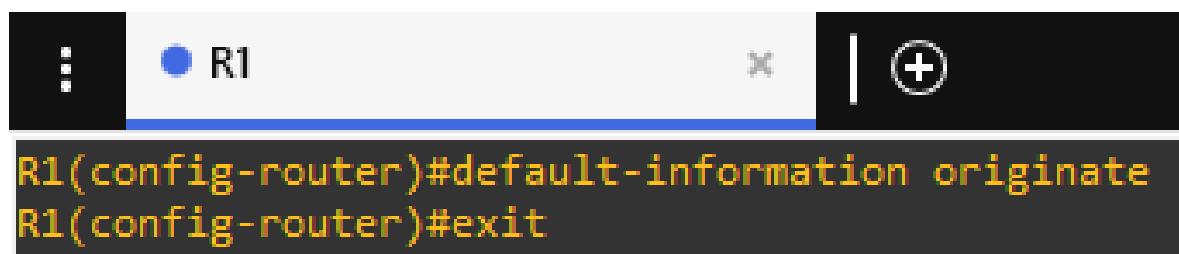

```
R1(config)#interface e1/2
R1(config-if)#ipv6 ospf 6 area 0
R1(config-if)#exit
R1(config)#interface e1/1
R1(config-if)#ipv6 ospf 6 area 0
R1(config-if)#exit
```

Figura 43. Redes en R1

- En R1, propague una ruta predeterminada. Tenga en cuenta que BGP proporcionará la ruta predeterminada

```
default-information originate
exit
```

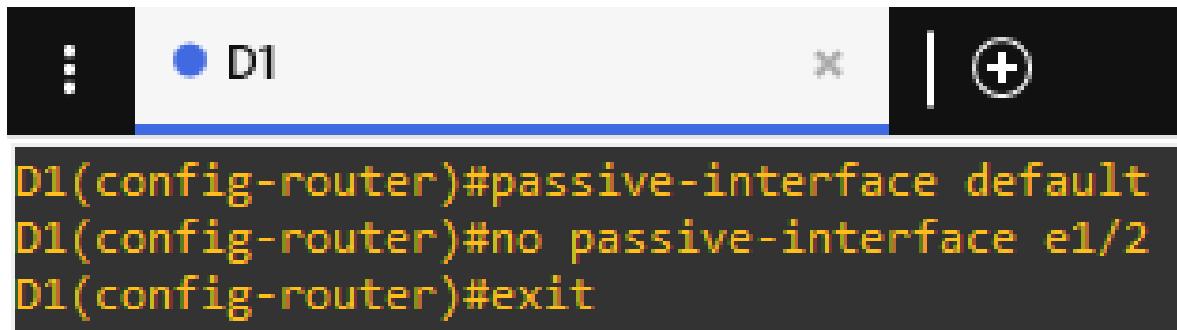

```
R1(config-router)#default-information originate
R1(config-router)#exit
```

Figura 44. Predeterminada R1

Desactive los anuncios de OSPFv3 en:

- D1: Todas las interfaces excepto E1/2

```
passive-interface default
no passive-interface e1/2
exit
```

```

D1(config-router)#passive-interface default
D1(config-router)#no passive-interface e1/2
D1(config-router)#exit

```

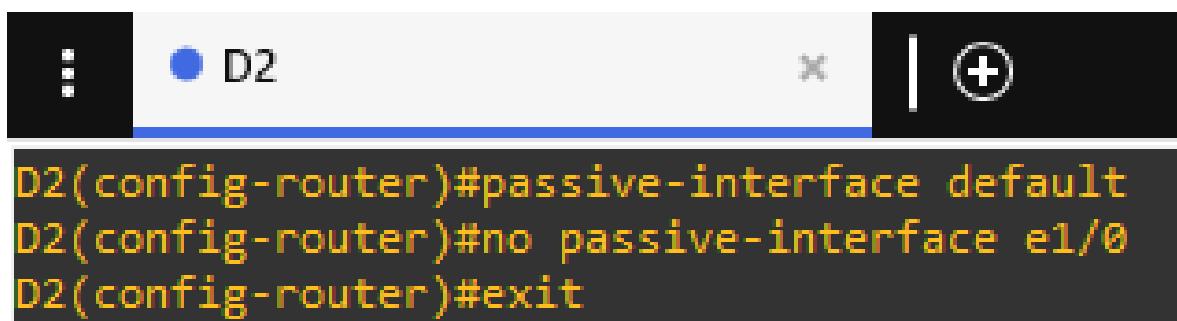

Figura 45. Anuncios OSPF v3 en D1

- D2: Todas las interfaces excepto E1/0

```

passive-interface default
no passive-interface e1/0
exit

```

```

D2(config-router)#passive-interface default
D2(config-router)#no passive-interface e1/0
D2(config-router)#exit

```

Figura 46. Anuncios OSPF v3 en D2

Tarea 3: En R2 en la "Red ISP", cen la figura MP-BGP.

Configure dos rutas estáticas predeterminadas a través de la interfaz Loopback 0:

- Una ruta estática predeterminada IPv4.

```
ip route 0.0.0.0 0.0.0.0 loopback 0
```

```

R2(config)#ip route 0.0.0.0 0.0.0.0 loopback 0

```

Figura 47. Estática en R2

- Una ruta estática predeterminada IPv6.

```
ipv6 route ::/0 loopback 0
```

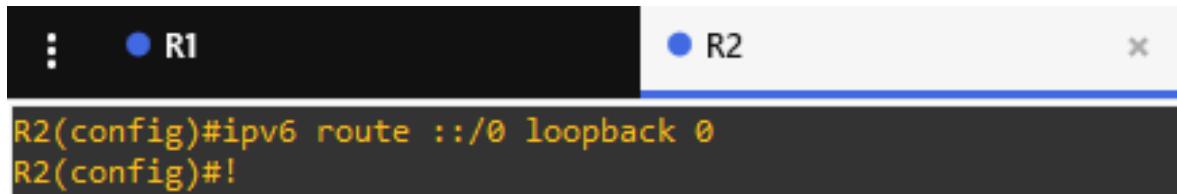

Figura 48. Estática IPv6 en R2

Configure R2 en BGP ASN 500 y utilice el router-id 2.2.2.2.

```
router bgp 500
bgp router-id 2.2.2.2
```

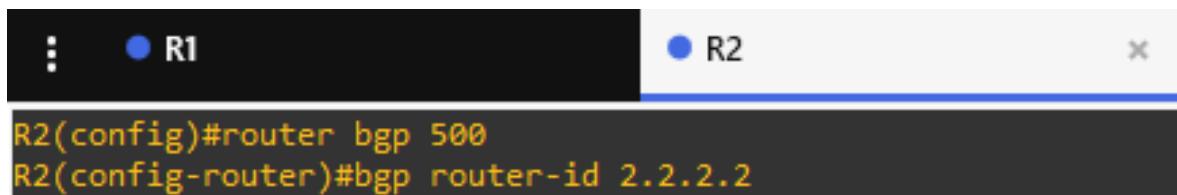

Figura 49. BGP 500 en R2

Configure y habilite una relación de vecino IPv4 e IPv6 con R1 en ASN 300.

```
neighbor 209.165.200.225 remote-as 300
neighbor 2001:db8:200::1 remote-as 300
```

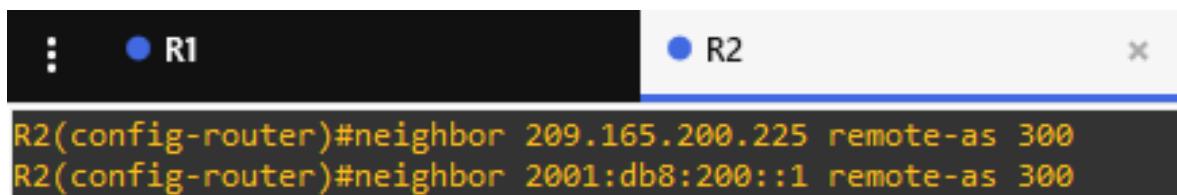

Figura 50. ANS 300 en R2

En la familia de direcciones IPv4, anuncie:

- La red IPv4 de bucle invertido 0 (/32).

```
address-family ipv4
neighbor 209.165.200.225 activate
no neighbor 2001:db8:200::1 activate
```

```
R2(config-router)#address-family ipv4
R2(config-router-af)#neighbor 209.165.200.225 activate
R2(config-router-af)#no neighbor 2001:db8:200::1 activate
```

Figura 51. Familia IPv4 en R2

- La ruta predeterminada (0.0.0.0/0).

```
network 2.2.2.2 mask 255.255.255.255
network 0.0.0.0
exit-address-family
```

```
R2(config-router-af)#network 2.2.2.2 mask 255.255.255.255
R2(config-router-af)#network 0.0.0.0
R2(config-router-af)#exit-address-family
```

Figura 52. Ruta predeterminada en R2

En Familia de direcciones IPv6 , anuncie:

- La red IPv4 de bucle invertido 0 (/128).

```
address-family ipv6
no neighbor 209.165.200.225 activate
neighbor 2001:db8:200::1 activate
```

```
R2(config-router)#address-family ipv6
R2(config-router-af)#no neighbor 209.165.200.225 activate
R2(config-router-af)#neighbor 2001:db8:200::1 activate
```

Figura 53. Familia IPv6

- La ruta predeterminada (::/0).

```
network 2001:db8:2222::/128
network ::/0
exit-address-family
```

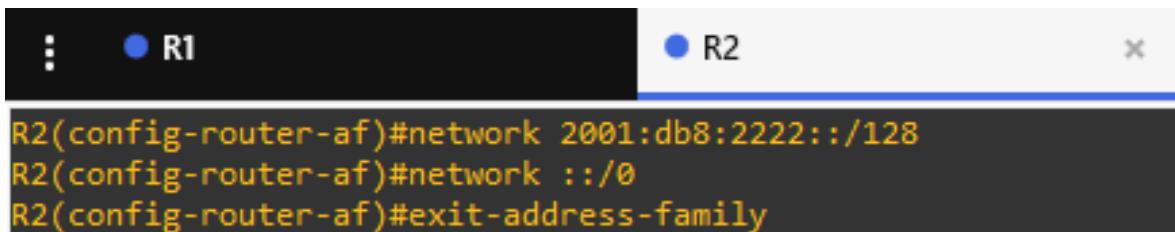

Figura 54. Predeterminada IPv6

Tarea 4: En R1 en la "Red ISP", configure MP-BGP.

Configure dos rutas de resumen estáticas para la interfaz Null 0:

- Un resumen de la ruta IPv4 para 10.XY.0.0/8

```
ip route 10.57.0.0 255.255.0.0 null0
```

Figura 55. Null para IPv4 en R1

- Un resumen de la ruta IPv6 para 2001:db8:100::/48

```
ipv6 route 2001:db8:100::/48 null0
```

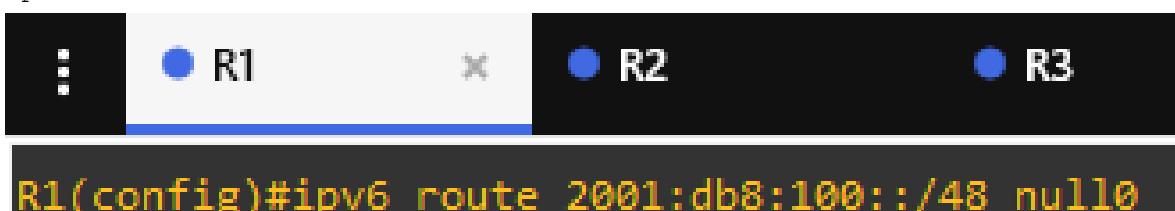

Figura 56. Null para IPv6 en R1

Configure R1 en BGP ASN 300 y utilice el router-id 1.1.1.1.

```
router bgp 300  
bgp router-id 1.1.1.1
```

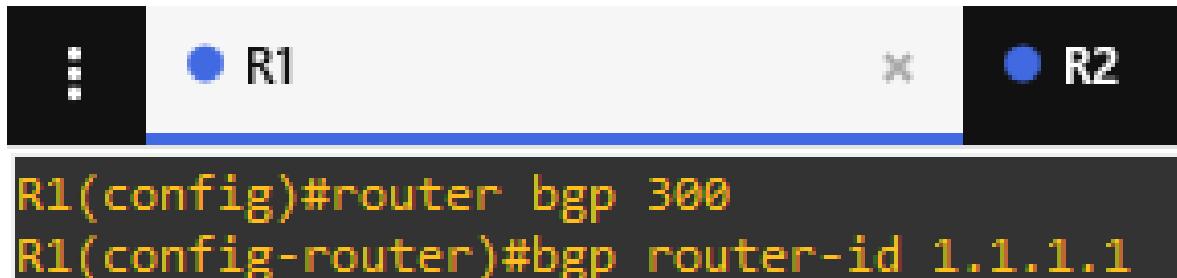

Figura 57. ASN 300 en R1

Configure una relación de vecino IPv4 e IPv6 con R2 en ASN 500.

```
neighbor 209.165.200.226 remote-as 500  
neighbor 2001:db8:200::2 remote-as 500
```

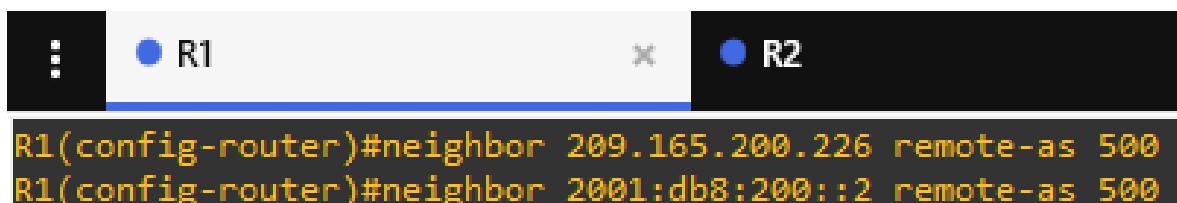

Figura 58. ASN 500 en R1

En la familia de direcciones IPv4:

- Habilite la relación de vecino IPv4.

```
address-family ipv4 unicast  
neighbor 209.165.200.226 activate
```

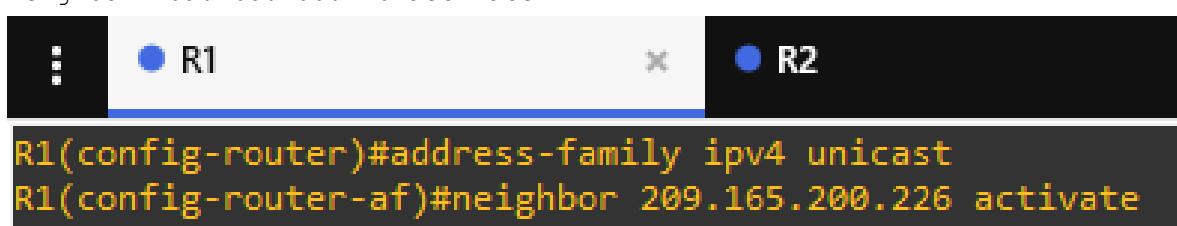

Figura 59. Familia IPv4 en R1

- Deshabilite la relación de vecino IPv6.

```
no neighbor 2001:db8:200::2 activate
```

```
R1(config-router-af)#no neighbor 2001:db8:200::2 activate
```

Figura 60. Desabilitando vecino IPv6 en R1

- Anuncie la red 10.XY0.0/8.

```
network 10.57.0.0 mask 255.255.0.0
exit-address-family
```

```
R1(config-router-af)#network 10.57.0.0 mask 255.255.0.0
R1(config-router-af)#exit-address-family
```

Figura 61. Red 10.57.0.0 en R1

En la familia de direcciones IPv6:

- Deshabilite la relación de vecino IPv4.

```
address-family ipv6 unicast
no neighbor 209.165.200.226 activate
```

```
R1(config-router)#address-family ipv6 unicast
R1(config-router-af)#no neighbor 209.165.200.226 activate
```

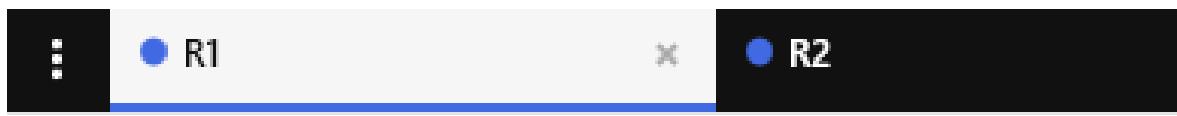

Figura 62. Desabilitando vecino IPv4 en R1

- Habilite la relación de vecino IPv6.

```
neighbor 2001:db8:200::2 activate
```

- Anuncie la red 2001:db8:100::/48

```
network 2001:db8:100::/48
exit-address-family
```

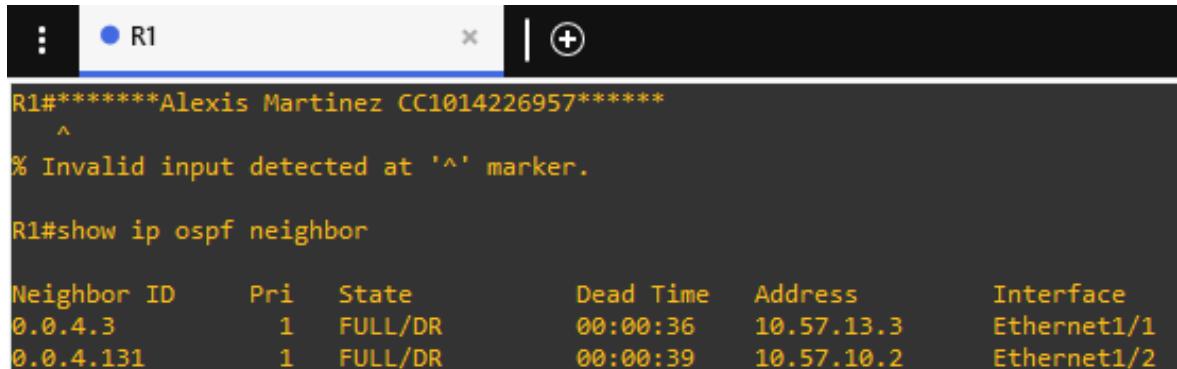

```
R1(config-router-af)#neighbor 2001:db8:200::2 activate
R1(config-router-af)#!
R1(config-router-af)#network 2001:db8:100::/48
R1(config-router-af)#exit-address-family
```

Figura 63. Habilitando vecino IPv6 en R1

Figura 72. Show ip route en R3

```
show ipv6 route
```

A terminal window titled 'R1' displays the output of the 'show ipv6 route' command. The output shows a routing table with 10 entries. The entries include various IPv6 prefixes and their corresponding via interfaces and metrics. The legend at the top defines codes for different route types like Connected (C), Local (L), Static (S), Per-user Static route (U), BGP (B), RIP (R), NHRP (H), ISIS L1 (I1), ISIS L2 (I2), ISIS interarea (IA), ISIS summary (IS), EIGRP (E), EIGRP external (EX), ND Default (ND), ND Prefix (NDp), Destination (DCE), Redirect (NDr), OSPF Intra (O), OSPF Inter (OI), OSPF ext 1 (OE1), OSPF ext 2 (OE2), OSPF NSSA ext 1 (ON1), OSPF NSSA ext 2 (ON2), and LISP (l).

Figura 75. Show ipv6 route en R3

Parte 4: Configurar redundancia de primer salto

En esta parte, configurará HSRP versión 2 para proporcionar redundancia de primer salto para hosts en la "Red de la empresa".

Las tareas de configuración son las siguientes:

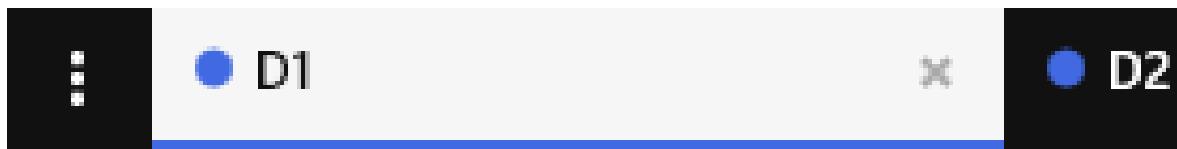

Tarea 1: En D1, cree SLA IP que prueben la accesibilidad de la interfaz R1 E1/2.

Cree dos SLA IP.

- Utilice el SLA número 4 para IPv4.
- Utilice el SLA número 6 para IPv6.

Los SLA IP probarán la disponibilidad de la interfaz R1 E1/2 cada 5 segundos.

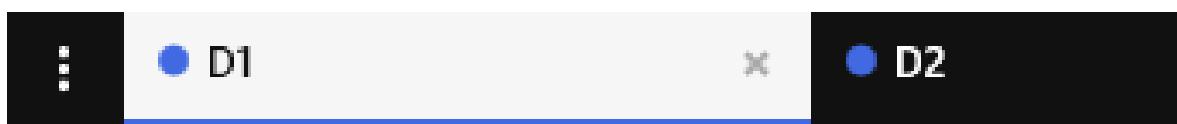

```
ip sla 4
icmp-echo 10.57.10.1
frequency 5
exit
```

```
D1(config)#ip sla 4
D1(config-ip-sla)#icmp-echo 10.57.10.1
D1(config-ip-sla-echo)#frequency 5
D1(config-ip-sla-echo)#exit
```

Figura 76. IP SLA 4 frecuencia 5 en D1

```
ip sla 6
icmp-echo 2001:db8:100:1010::1
frequency 5
exit
```

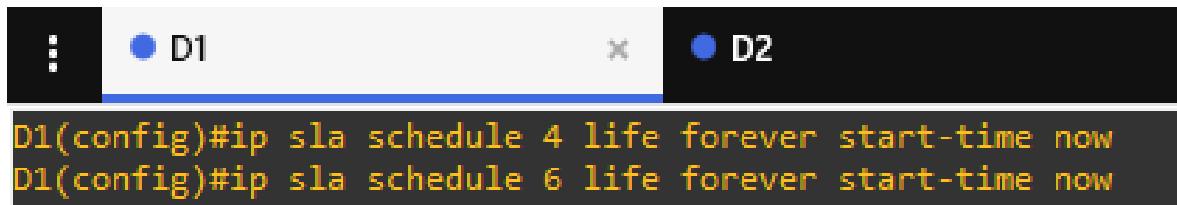

```
D1(config)#ip sla 6
D1(config-ip-sla)#icmp-echo 2001:db8:100:1010::1
D1(config-ip-sla-echo)#frequency 5
D1(config-ip-sla-echo)#exit
```

Figura 77. IPv6 SLA 4 frecuencia 5 en D1

Programe el SLA para su implementación inmediata sin hora de finalización.

```
ip sla schedule 4 life forever start-time now
ip sla schedule 6 life forever start-time now
```

```

D1(config)#ip sla schedule 4 life forever start-time now
D1(config)#ip sla schedule 6 life forever start-time now

```

Figura 78. SLA sin finalización en D1

Cree un objeto de SLA de IP para el SLA 4 y otro para el SLA de IP 6.

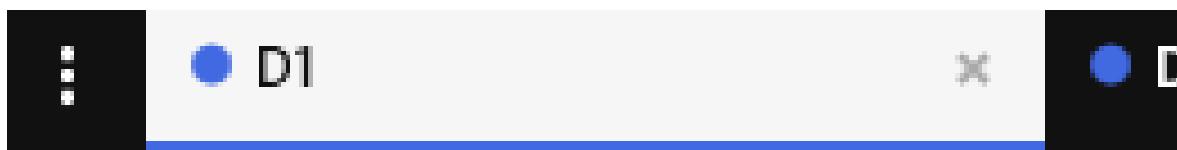

- Utilice el número de pista 4 para IP SLA 4
- Utilice el número de pista 6 para IP SLA 6

Los objetos rastreados deben notificar a D1 si el estado del SLA IP cambia de abajo a arriba después de 10 segundos, o de arriba a abajo después de 15 segundos.

```

track 4 ip sla 4
delay down 10 up 15
exit

```

```

D1(config)#track 4 ip sla 4
D1(config-track)#delay down 10 up 15
D1(config-track)#exit

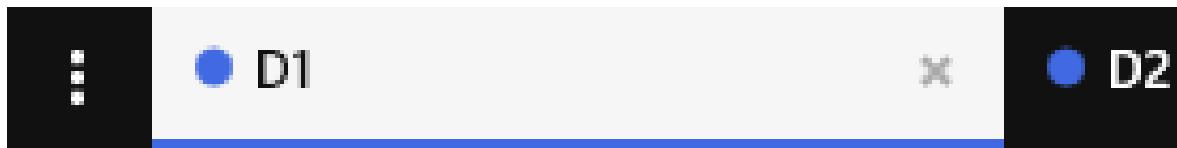

```

Figura 79. Track 4 en D1

```

track 6 ip sla 6
delay down 10 up 15
exit

```

```

D1(config)#track 6 ip sla 6
D1(config-track)#delay down 10 up 15
D1(config-track)#exit

```

Figura 80. Track 6 en D1

Tarea 2: En D2, cree SLA IP que prueben la accesibilidad de la interfaz R3 E1/0.

Cree dos SLA IP.

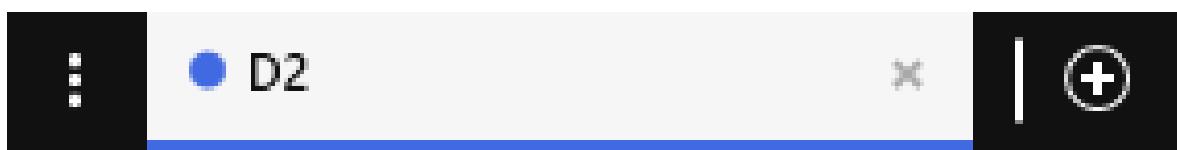

- Utilice el SLA número 4 para IPv4.
- Utilice el SLA número 6 para IPv6.

Los SLA IP probarán la disponibilidad de la interfaz R3 E1/0 cada 5 segundos.

```

ip sla 4
icmp-echo 10.57.11.1
frequency 5
exit

```

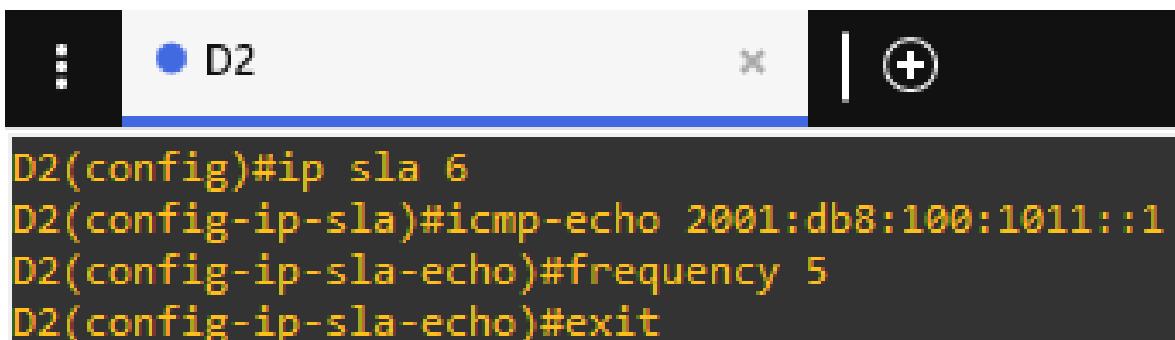

```

D2(config)#ip sla 4
D2(config-ip-sla)#icmp-echo 10.57.11.1
D2(config-ip-sla-echo)#frequency 5
D2(config-ip-sla-echo)#exit

```

Figura 81. IP SLA 4 frecuencia 5 en D2

```
ip sla 6
icmp-echo 2001:db8:100:1011::1
frequency 5
exit
```

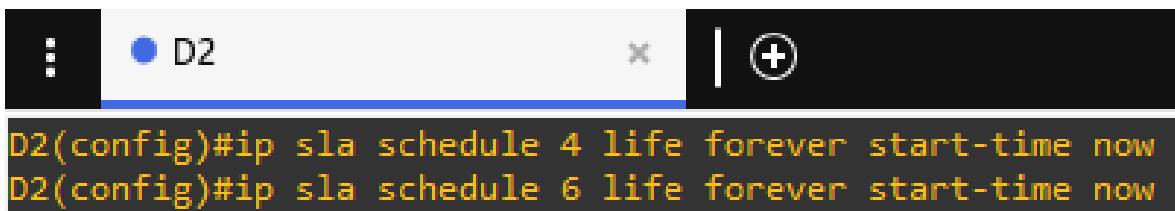

```
D2(config)#ip sla 6
D2(config-ip-sla)#icmp-echo 2001:db8:100:1011::1
D2(config-ip-sla-echo)#frequency 5
D2(config-ip-sla-echo)#exit
```

Figura 82. IPv6 SLA 4 frecuencia 5 en D2

Programe el SLA para su implementación inmediata sin hora de finalización.

```
ip sla schedule 4 life forever start-time now
ip sla schedule 6 life forever start-time now
```

```
D2(config)#ip sla schedule 4 life forever start-time now
D2(config)#ip sla schedule 6 life forever start-time now
```

Figura 83. Sin finalización en D2

Cree un objeto de SLA de IP para el SLA 4 y otro para el SLA de IP 6.

- Utilice el número de pista 4 para IP SLA 4.
- Utilice el número de pista 6 para IP SLA 6.

Los objetos rastreados deben notificar a D1 si el estado del SLA IP cambia de abajo a arriba después de 10 segundos, o de arriba a abajo después de 15 segundos.

```
track 4 ip sla 4
delay down 10 up 15
exit
```

```

D2(config)#track 4 ip sla 4
D2(config-track)#delay down 10 up 15
D2(config-track)#exit

```

Figura 84. Track 4 de abajo a arriba en 10 y 15 sec en D2

```

track 6 ip sla 6
delay down 10 up 15
exit

```

```

D2(config)#track 6 ip sla 6
D2(config-track)#delay down 10 up 15
D2(config-track)#exit

```

Figura 85. Track 6 de abajo a arriba en 10 y 15 sec en D2

Tarea 3: En D1, configure HSRPv2.

D1 es el router principal para VLAN 100 y 102; por lo tanto, su prioridad también se cambiará a 150.

Configure HSRP versión 2.

Configure el grupo 104 de HSRP IPv4 para VLAN 100:

- Asigne la dirección IP virtual 10.XY.100.254.
- Establezca la prioridad del grupo en 150.
- Habilite la preferencia.

- Realice un seguimiento del objeto 4 y disminuya en 60.

```
interface vlan 100
standby version 2
standby 104 ip 10.57.100.254
standby 104 priority 150
standby 104 preempt
standby 104 track 4 decrement 60
```

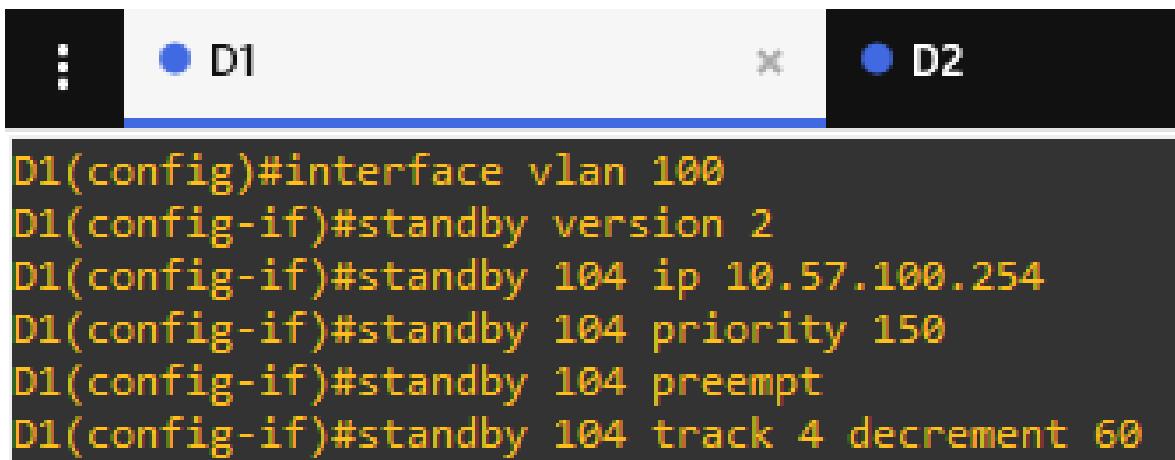

Figura 86. Grupo 104 IPv4

Configure el grupo 114 de HSRP IPv4 para VLAN 101:

- Asigne la dirección IP virtual 10.XY.10 1.254.
- Habilite la preferencia.
- Realice un seguimiento del objeto 4 hasta disminuir en 60.

```
interface vlan 101
standby version 2
standby 114 ip 10.57.101.254
standby 114 priority 150
standby 114 preempt
standby 114 track 4 decrement 60
```

```
D1(config)#interface vlan 101
D1(config-if)#standby version 2
D1(config-if)#standby 114 ip 10.57.101.254
D1(config-if)#standby 114 priority 150
D1(config-if)#standby 114 preempt
D1(config-if)#standby 114 track 4 decrement 60
```

Figura 87. Grupo 114 IPv4

Configure el grupo HSRP IPv4 124 para VLAN 102:

- Asigne la dirección IP virtual 10.XY.10 2.254.
- Establezca la prioridad del grupo en 150.
- Habilite la preferencia.
- Realice un seguimiento del objeto 4 hasta disminuir en 60.

```
interface vlan 102
standby version 2
standby 124 ip 10.57.102.254
standby 124 priority 150
standby 124 preempt
standby 124 track 4 decrement 60
```

```
D1(config)#interface vlan 102
D1(config-if)#standby version 2
D1(config-if)#standby 124 ip 10.57.102.254
D1(config-if)#standby 124 priority 150
D1(config-if)#standby 124 preempt
D1(config-if)#standby 124 track 4 decrement 60
```

Figura 88. Grupo 124 IPv4

Configure IPv6 HSRP grupo 106 para VLAN 100:

- Asigne la dirección IP virtual mediante la configuración automática de ipv6.
- Establezca la prioridad del grupo en 150.
- Habilite la preferencia.
- Realice un seguimiento del objeto 6 y disminuya en 60.

```
standby 106 ipv6 autoconfig  
standby 106 priority 150  
standby 106 preempt  
standby 106 track 6 decrement 60  
exit
```

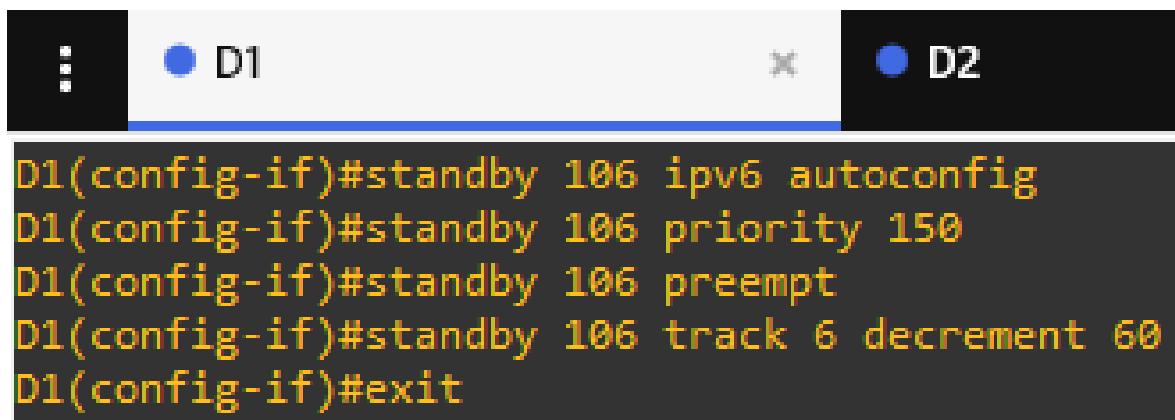

Figura 89. Grupo 106 IPv6

Configure el grupo HSRP IPv6 11 6 para VLAN 101:

- Asigne la dirección IP virtual mediante la configuración automática de ipv6.
- Habilite la preferencia.
- Realice un seguimiento del objeto 6 y disminuya en 60.

```
standby 116 ipv6 autoconfig  
standby 116 preempt  
standby 116 track 6 decrement 60  
exit
```

```
D1(config-if)#standby 116 ipv6 autoconfig
D1(config-if)#standby 116 preempt
D1(config-if)#standby 116 track 6 decrement 60
D1(config-if)#exit
```

Figura 90. Grupo 116 IPv6

Configure IPv6 HSRP grupo 126 para VLAN 102:

- Asigne la dirección IP virtual mediante la configuración automática de ipv6.
- Establezca la prioridad del grupo en 150.
- Habilite la preferencia.
- Realice un seguimiento del objeto 6 y disminuya en 60

```
standby 126 ipv6 autoconfig
standby 126 priority 150
standby 126 preempt
standby 126 track 6 decrement 60
exit
```

```
D1(config-if)#standby 126 ipv6 autoconfig
D1(config-if)#standby 126 priority 150
D1(config-if)#standby 126 preempt
D1(config-if)#standby 126 track 6 decrement 60
D1(config-if)#exit
```

Figura 91. Grupo 126 IPv6

D2 es el router principal para VLAN 101; por lo tanto, la prioridad también se cambiará a 150.

Configure HSRP versión 2.

Configure el grupo 104 de HSRP IPv4 para VLAN 100:

- Asigne la dirección IP virtual 10.XY.100.254.
- Habilite la preferencia.
- Realice un seguimiento del objeto 4 y disminuya en 60.

```
interface vlan 100
standby version 2
standby 104 ip 10.57.100.254
standby 104 preempt
standby 104 track 4 decrement 60
```

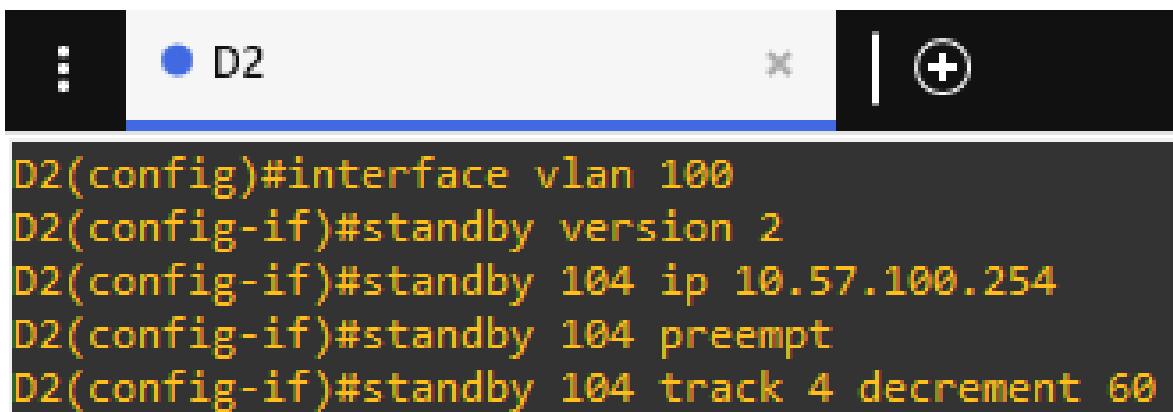

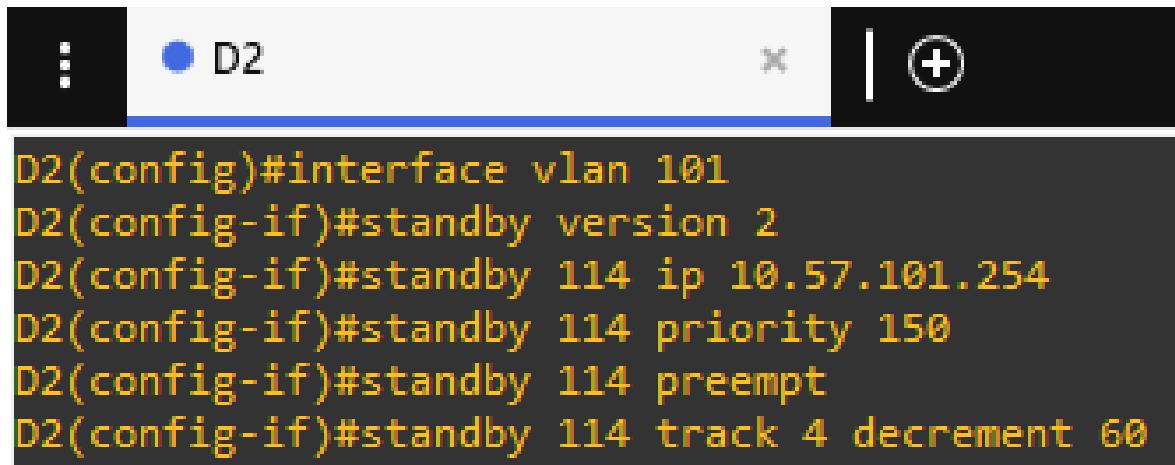

Figura 92. Grupo 104 IPv6

Configure el grupo 114 de HSRP IPv4 para VLAN 101:

- Asigne la dirección IP virtual 10. XY.10 1,254.
- Establezca la prioridad del grupo en 150.
- Habilite la preferencia.
- Realice un seguimiento del objeto 4 hasta disminuir en 60.

```
interface vlan 101
standby version 2
standby 114 ip 10.57.101.254
standby 114 priority 150
standby 114 preempt
standby 114 track 4 decrement 60
```

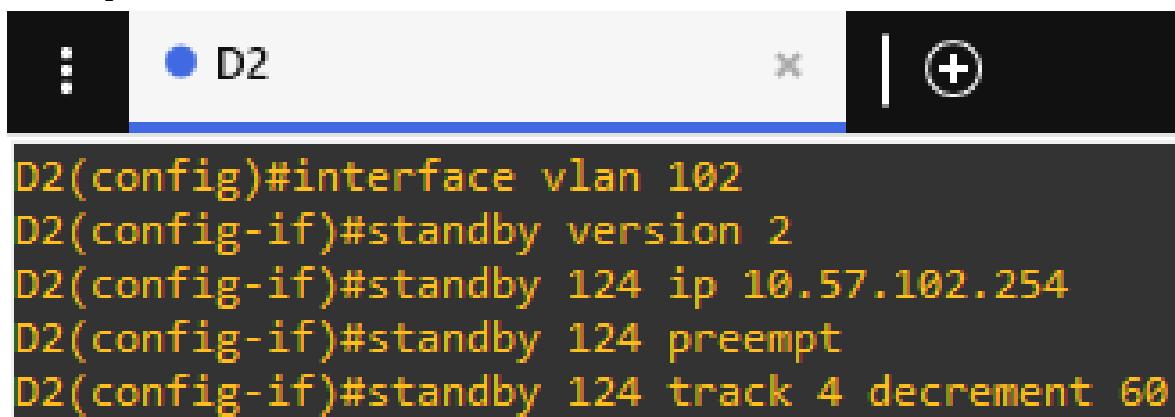

```
D2(config)#interface vlan 101
D2(config-if)#standby version 2
D2(config-if)#standby 114 ip 10.57.101.254
D2(config-if)#standby 114 priority 150
D2(config-if)#standby 114 preempt
D2(config-if)#standby 114 track 4 decrement 60
```

Figura 93. Grupo 114 IPv4 D2

Configure el grupo HSRP IPv4 124 para VLAN 102:

- Asigne la dirección IP virtual 10.XY.10 2.254.
- Habilite la preferencia.
- Realice un seguimiento del objeto 4 hasta disminuir en 60.

```
interface vlan 102
standby version 2
standby 124 ip 10.57.102.254
standby 124 preempt
standby 124 track 4 decrement 60
```

```
D2(config)#interface vlan 102
D2(config-if)#standby version 2
D2(config-if)#standby 124 ip 10.57.102.254
D2(config-if)#standby 124 preempt
D2(config-if)#standby 124 track 4 decrement 60
```

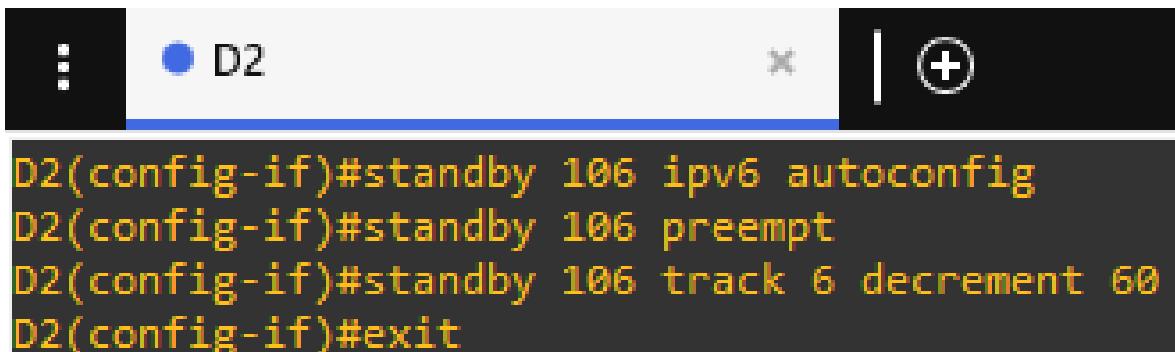

Figura 94. Grupo 124 IPv4 D2

Configure IPv6 HSRP grupo 106 para VLAN 100:

- Asigne la dirección IP virtual mediante la configuración automática de ipv6.
- Habilite la preferencia.

- Realice un seguimiento del objeto 6 y disminuya en 60.

```
standby 106 ipv6 autoconfig
standby 106 preempt
standby 106 track 6 decrement 60
exit
```

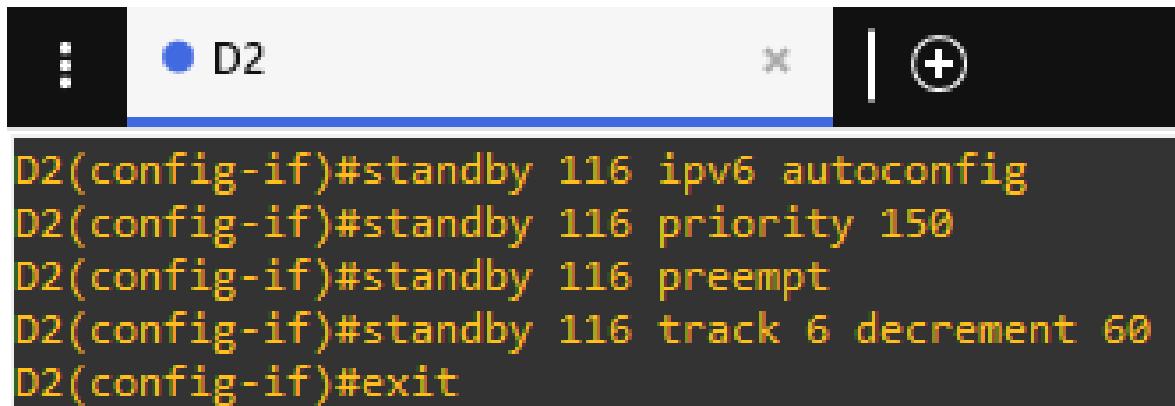

```
D2(config-if)#standby 106 ipv6 autoconfig
D2(config-if)#standby 106 preempt
D2(config-if)#standby 106 track 6 decrement 60
D2(config-if)#exit
```

Figura 95. Grupo 106 IPv6 D2

Configure el grupo HSRP IPv6 11 6 para VLAN 101:

- Asigne la dirección IP virtual mediante la configuración automática de ipv6.
- Establezca la prioridad del grupo en 150.
- Habilite la preferencia.
- Realice un seguimiento del objeto 6 y disminuya en 60.

```
standby 116 ipv6 autoconfig
standby 116 priority 150
standby 116 preempt
standby 116 track 6 decrement 60
exit
```

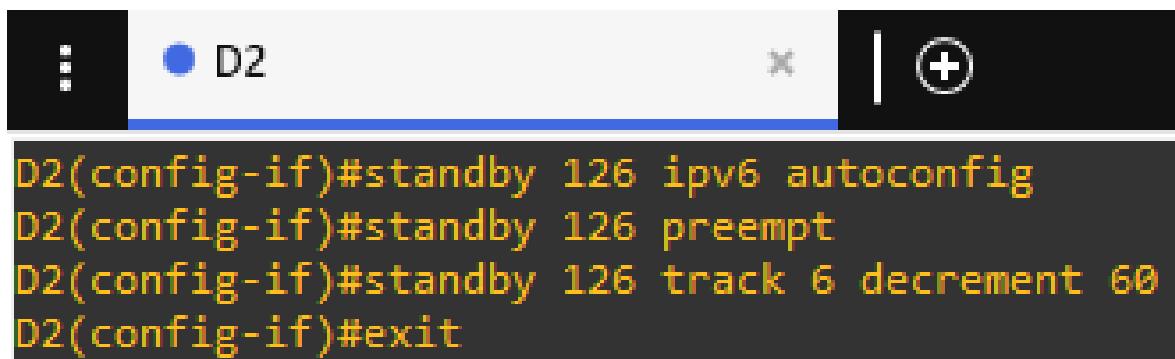

```

Figura 96. Grupo 116 IPv6 D2

Configure IPv6 HSRP grupo 126 para VLAN 102:

- Asigne la dirección IP virtual mediante la configuración automática de ipv6.
- Habilite la preferencia.
- Realice un seguimiento del objeto 6 y disminuya en 60

```
standby 126 ipv6 autoconfig
standby 126 preempt
standby 126 track 6 decrement 60
exit
```

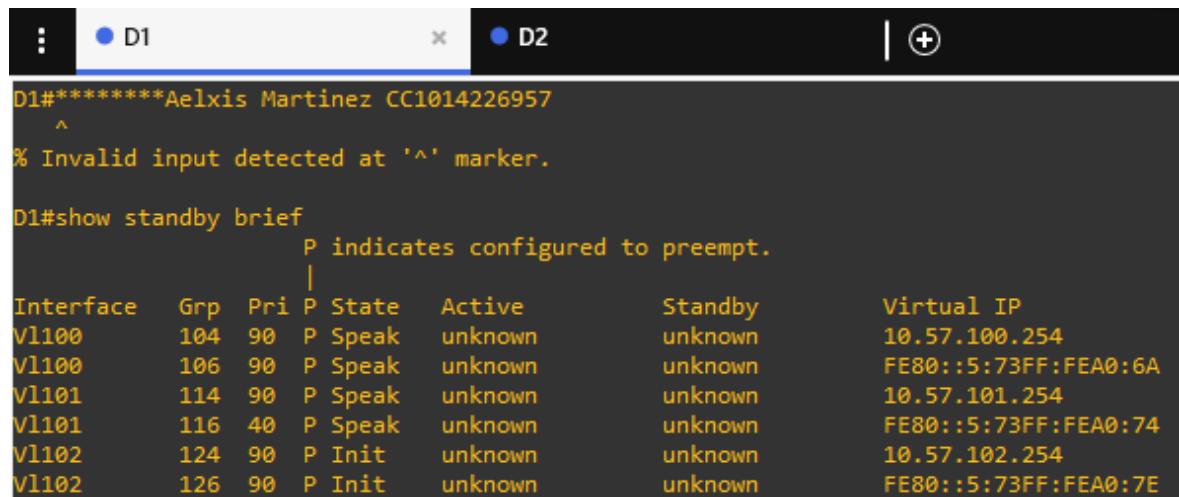

```
D2(config-if)#standby 126 ipv6 autoconfig
D2(config-if)#standby 126 preempt
D2(config-if)#standby 126 track 6 decrement 60
D2(config-if)#exit
```

CONCLUSIONES

Podemos concluir que la solución implementada hace uso de enlaces en modo troncal, EtherChannel a través del protocolo LACP de agrupación de puertos, protocolo Rapid Spanning-Tree, configuración de puente raíz, y puertos de acceso con DHCP, todo esto con el propósito de sacar el mejor provecho a la conexión en capa 2; donde permite dar tolerancia a las fallas y protección contra la inoperatividad, garantizando la eliminación de bucles las conexiones redundantes.

Podemos concluir que gracias al uso de protocolos de enrutamientos como lo son OSPF nuestra configuración nos permite ver nuestro vecinos de red capa tres en donde se tiene un identificador de área y con BGP compartir esta información de enrutamiento dependiendo de su sistema autónomo (AS) el cual puede ser interno o externo.

Podemos concluir que gracias al protocolo HSRP nuestra red nos permite crear redundancia debido a su funcionamiento el cual mantiene uno de los dos router en modo activo, el cual se encargará de rutear todo el tráfico en caso de que el otro falle, también se puede concluir que la configuración de una IP SLA nos permitirá mantener nuestra red monitorizada a través de mensajes ICMP.
