AGRADECIMIENTOS

El agradecimiento de este Diplomado va dirigido en primer lugar a Dios ya que en los momentos difíciles él fue mi soporte, a mi familia porque me brindo un apoyo y me acompañó en la distancia, a mi tutor por que fue una guía durante este proceso de formación y a mis amigos que siempre vieron lo mejor de mí para salir adelante.

Muestro mis más sinceros agradecimientos con la Universidad Nacional Abierta y a Distancia (UNAD); porque lo que empezó como un sueño hoy ya es un logro.

GLOSARIO

CCNP: Cisco Network Professional aprueba la habilidad de planificar, implementar, verificar y resolver problemas de redes locales.

PROTOCOLOS DE ENRUTAMIENTO: Son aquellas normas que deben cumplir los enrutadores para establecer una comunicación entre sí, además de seleccionar las mejores rutas de distribución en una red informática.

REDES LOCALES: Es un grupo de equipos (Computadoras), las cuales permiten la comunicación e intercambio de datos entre diferentes dispositivos en una red pequeña.

ROUTER: Es una herramienta fundamental, la cual se encarga de permitir la conexión entre redes locales y a internet por medio de protocolos.

TOPOLOGÍA: Son aquellas que nos permiten organizar una red, teniendo en cuenta las necesidades de los clientes.

RESUMEN

El diplomado de profundización cisco CCNP implica el conjunto de habilidades aprendidas durante un proceso de formación; teniendo en cuenta la aplicación del pensum académico para luego ser ejecutado por los estudiantes que consideran un mayor crecimiento en el aprendizaje de las redes CISCO CCNA, es una base fundamental para el adecuado desarrollo del diplomado expuesto en este documento.

Para la ejecución de los diferentes laboratorios y actividades expuestas en esta formación, se tienen en cuenta conceptos básicos como CCNP, protocolos de enrutamiento, redes locales, Routers, topologías, VLAN entre otros conceptos más avanzados. Todo esto fue ejecutado dentro del software de PAKECT TRACER o por medio de máquinas virtuales soportadas con GNS3.

Dicho laboratorio tenía la finalidad de diseñar una red donde se permitiera la conexión de diferentes dispositivos; teniendo en cuenta las versiones establecidas en la guía de los Switch y los Routers, para luego construir la red y configurar cada dispositivo con un direccionamiento de las interfaces y el soporte en los Host; para finalmente configurar los protocolos de enrutamiento.

Palabras Clave: CISCO, CCNP, Conmutación, Enrutamiento, Redes, Telecomunicaciones.

ABSTRACT

The Cisco CCNP in-depth diploma involves the set of skills learned during a training rotoco; Taking into account the application of the academic curriculum to be later executed by the students who, considering a greater growth in the learning of the CISCO CCNA networks, is a fundamental base for the adequate development of the diploma exposed in this.

For the execution of the different laboratories and activities exposed in this training, basic concepts such as CCNP, rotoco, local networks, routers, topologies, VLANs among other more advanced concepts are taken into account. All of this was executed within the PAKECT TRACER software or via GNS3 supported virtual machines.

Said laboratory had the purpose of designing a network where the connection of different devices was allowed; taking into account the versions established in the guide for Switches and Routers, to then build the network and configure each device with an protocol of the interfaces and support in the Hosts; to finally configure the protocol.

Keywords: CISCO, CCNP, Switching, Routing, Networks, Telecommunications.

INTRODUCCIÓN

El “DOCUMENTO FINAL”; forma parte de las actividades evaluativas del Diplomado de Profundización CCNP, el cual busca identificar el grado de desarrollo de habilidades y competencias que se adquieren a lo largo del diplomado. Lo primordial es colocar a prueba los niveles de comprensión y solución de problemas relacionados con aspectos de Networking.

Para esta actividad, el estudiante debe realizar las actividades asignadas en el escenario propuesto, acompañado de documentación, correspondientes al registro de configuración en cada uno de los equipos, la descripción del paso a paso de cada una de las etapas realizadas durante el proceso de formación, el registro de los procesos de verificación de conectividad mediante los comandos de ping, Show ip interface brief, entre otros

Inicialmente se configura el direccionamiento IP en todos los dispositivos tanto en IPV4 como en IPV6, luego se implementan 2 switches que se encargan de la conmutación, Se configura el OSPFv2 para IPV4 y OSPFv2 para IPv6 de LAN esta primera parte asegura la interconexión de los equipos dando respuesta sin ninguna novedad.

El segundo escenario es la parte de autenticación, listas de control, HSRP versión 2, el cual brinda redundancia al host y funciona como mecanismo de seguridad en las redes y sus dispositivos.

PARTE 1: CONSTRUIR LA RED Y CONFIGURAR LOS PARÁMETROS BÁSICOS DE LOS DISPOSITIVOS Y EL DIRECCIONAMIENTO DE LAS INTERFACES

Paso 1: Cablear la red como se muestra en la topología.

PC3	NIC	DHCP	SLAAC	EUI-64
PC4	NIC	10.78.100.6/24	2001:db8:100:100::6/64	EUI-64

Paso 2: Configurar los parámetros básicos para cada dispositivo

Se configura los parámetros básicos de los dispositivos como los nombres, textos de para cada equipo, específicamente las IP de cada interfaz tanto en IPV4 como en IPV6 de cada uno de los router, en el caso de los switches la creación de las VLAN con sus nombres, las direcciones IP, y se crea un pool DHCP con sus respectivas exclusiones.

A1(config-if-range)# shutdown
A1(config-if-range)# exit

```

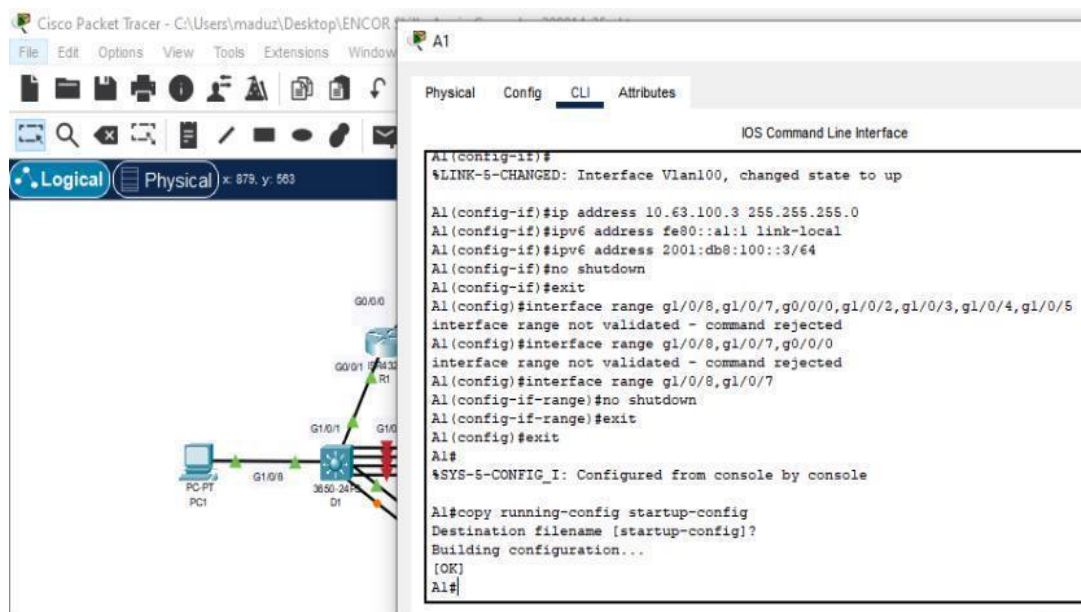

Figura 8. Configuración de Switch A1

Guarda la configuración en ejecución en startup-config en todos los dispositivos.

```
D1#copy running-config startup-config
```

Se configura el host PC1 y PC4, como se muestra en la tabla de direccionamiento de prueba de enlace 10.63.100.254, que será la dirección IP virtual de HSRP utilizada en la Parte 4.

Se asigna la siguiente IP

PC1: Ip 10.63.100.5/24 10.63.100.254

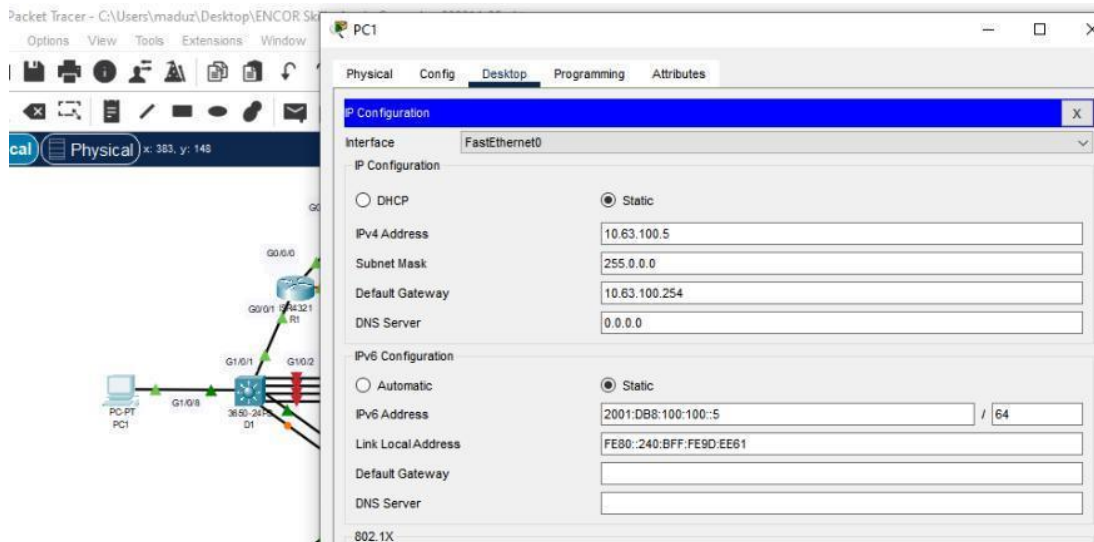

Figura 9. Asignación de ip al PC1

PC4: ip 10.63.100.6/24 10.63.100.254

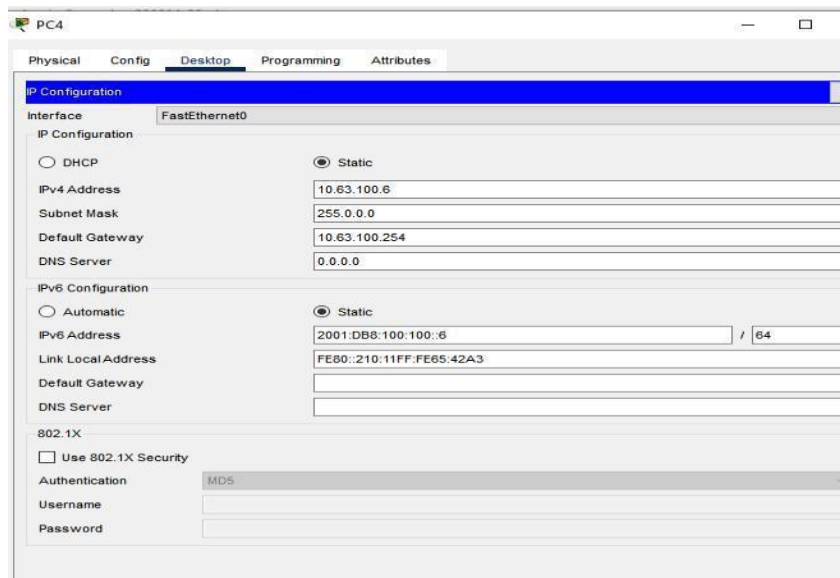

Figura 10. Asignación de ip al PC2

PARTE 2: CONFIGURAR LA CAPA 2 DE LA RED Y EL SOPORTE DE HOST

Tabla 2. Configuración de las capas 2

Task#	Task	Specification	Points
2.1	On all switches, configure IEEE 802.1Q trunk interfaces on interconnecting switch links	Enable 802.1Q trunk links between: <ul style="list-style-type: none"> • D1 and D2 • D1 and A1 • D2 and A1 	6
2.2	On all switches, change the native VLAN on trunk links.	Use VLAN 999 as the native VLAN.	6
2.3	On all switches, enable the Rapid Spanning-Tree Protocol.	Use Rapid Spanning Tree.	3
2.4	On D1 and D2, configure the appropriate RSTP root bridges based on the information in the topology diagram. D1 and D2 must provide backup in case of root bridge failure.	Configure D1 and D2 as root for the appropriate VLANs with mutually supporting priorities in case of switch failure.	2
2.5	On all switches, create LACP EtherChannels as shown in the topology diagram.	Use the following channel numbers: <ul style="list-style-type: none"> • D1 to D2 – Port channel 12 • D1 to A1 – Port channel 1 • D2 to A1 – Port channel 2 	3

Task#	Task	Specification	Points
2.6	On all switches, configure host access ports connecting to PC1, PC2, PC3, and PC4.	Configure access ports with appropriate VLAN settings as shown in the topology diagram. Host ports should transition immediately to forwarding state.	4
2.7	Verify IPv4 DHCP services.	PC2 and PC3 are DHCP clients and should be receiving valid IPv4 addresses.	1
2.8	Verify local LAN connectivity.	PC1 should successfully ping: <ul style="list-style-type: none"> • D1: 10.XY.100.1 • D2: 10.XY.100.2 • PC4: 10.XY.100.6 PC2 should successfully ping: <ul style="list-style-type: none"> • D1: 10.XY.102.1 • D2: 10.XY.102.2 PC3 should successfully ping: <ul style="list-style-type: none"> • D1: 10.XY.101.1 • D2: 10.XY.101.2 PC4 should successfully ping: <ul style="list-style-type: none"> • D1: 10.XY.100.1 • D2: 10.XY.100.2 • PC1: 10.XY.100.5 	1

Paso 2.1: Configurar las interfaces troncales

Switch D1:

interface range e0/1-3,e1/0 --- configura un grupo de interfaces

switchport trunk encapsulation dot1q ---- establece la encapsulación en el estándar IEEE 802.1Q

switchport mode trunk ---- configura la interfaz troncal

interface range e2/1-2

switchport trunk encapsulation dot1q

switchport mode trunk

Switch D2:

interface range ethernet1/0/1-4

switchport mode trunk

interface range ethernet1/0/5-6

switchport mode trunk

Switch A1:

Interface range ethernet0/1-2

switchport mode trunk

interface range ethernet0/3-4

switchport mode trunk

Paso 2.2: Configurar la VLAN 99 como nativa

Switch D1:

```
interface range ethernet1/0/1-4
switchport mode trunk
switchport trunk native vlan 999
interface range ethernet1/0/5-6
switchport mode trunk
switchport trunk native vlan 999
```

Switch D2

```
interface range ethernet1/0/1-4
switchport mode trunk
switchport trunk native vlan 999
interface range ethernet1/0/5-6
switchport mode trunk
switchport trunk native vlan 999
```

Switch A1

```
interfacerange ethernet0/1-2
switchport mode trunk
switchport trunk native vlan 999
interface range ethernet0/3-4
switchport mode trunk
switchport trunk native vlan 999
```

Paso 2.8: Verificación de la conectividad de la LAN local

The screenshot shows a network simulation interface with a table of events. The table has columns for Fire, Last Status, Source, Destination, Type, Color, Time(sec), Periodic, Num, and Edit. A single row shows a successful ICMP ping from PC1 to PC4.

Fire	Last Status	Source	Destination	Type	Color	Time(sec)	Periodic	Num	Edit
	Successful	PC1	PC4	ICMP		0.000	N	0	(edit)

Figura 19. Verificación conectividad LAN en PC1

The screenshot shows a network simulation interface with a table of events. The table has columns for Fire, Last Status, Source, Destination, Type, Color, Time(sec), Periodic, Num, and Edit. A single row shows a successful ICMP ping from PC2 to PC1.

Fire	Last Status	Source	Destination	Type	Color	Time(sec)	Periodic	Num	Edit
	Successful	PC2	PC1	ICMP		0.000	N	0	(edit)

Figura 21. Verificación conectividad LAN en PC2

The screenshot shows a network simulation interface with a table of events. The table has columns for Fire, Last Status, Source, Destination, Type, Color, Time(sec), Periodic, Num, and Edit. A single row shows a successful ICMP ping from PC3 to PC2.

Fire	Last Status	Source	Destination	Type	Color	Time(sec)	Periodic	Num	Edit
	Successful	PC3	PC2	ICMP		0.000	N	0	(edit)

Figura 22. Verificación conectividad LAN en PC3

PARTE 3: CONFIGURAR LOS PROTOCOLOS DE ENRUTAMIENTO

En esta parte, debe configurar los protocolos de enrutamiento IPv4 e IPv6. Al final de esta parte, la red debería estar completamente convergente. Los pings de IPv4 e IPv6 a la interfaz Loopback 0 desde D1 y D2 deberían ser exitosos.

Nota: Los pings desde los hosts no tendrán éxito porque sus puertas de enlace predeterminadas apuntan a la dirección HSRP que se habilitará en la Parte 4.

Tabla 3. Configurar protocolos de enrutamiento 1

Task#	Task	Specification	Points
3.1	On the “Company Network” (i.e., R1, R3, D1, and D2), configure single-area OSPFv2 in area 0.	<p>Use OSPF Process ID 4 and assign the following router-IDs:</p> <ul style="list-style-type: none"> • R1: 0.0.4.1 • R3: 0.0.4.3 • D1: 0.0.4.131 • D2: 0.0.4.132 <p>On R1, R3, D1, and D2, advertise all directly connected networks / VLANs in Area 0.</p> <ul style="list-style-type: none"> • On R1, do not advertise the R1 – R2 network. • On R1, propagate a default route. Note that the default route will be provided by BGP. <p>Disable OSPFv2 advertisements on:</p> <ul style="list-style-type: none"> • D1: All interfaces except E1/2 • D2: All interfaces except E1/0 	8

Task#	Task	Specification	Points
3.2	On the “Company Network” (i.e., R1, R3, D1, and D2), configure classic single-area OSPFv3 in area 0.	<p>Use OSPF Process ID 6 and assign the following router-IDs:</p> <ul style="list-style-type: none"> • R1: 0.0.6.1 • R3: 0.0.6.3 • D1: 0.0.6.131 • D2: 0.0.6.132 <p>On R1, R3, D1, and D2, advertise all directly connected networks / VLANs in Area 0.</p> <ul style="list-style-type: none"> • On R1, do not advertise the R1 – R2 network. • On R1, propagate a default route. PARTE 4: CONFIGURAR LA REDUNDANCIA DEL PRIMER SALTO (FIRST HOP REDUNDANCY)

En esta parte, configurará HSRP versión 2 para proporcionar redundancia de primer salto para hosts en la "red de la empresa".

Sus tareas de configuración son las siguientes:

Tabla 4. Configurar protocolos de enrutamiento 2

Task#	Task	Specification	Points
4.1	On D1, create IP SLAs that test the reachability of R1 interface G0/0/1.	<p>Create two IP SLAs.</p> <ul style="list-style-type: none"> • Use SLA number 4 for IPv4. • Use SLA number 6 for IPv6. <p>The IP SLAs will test availability of R1 E1/2 interface every 5 seconds.</p> <p>Schedule the SLA for immediate implementation with no end time.</p> <p>Create an IP SLA object for IP SLA 4 and one for IP SLA 6.</p> <ul style="list-style-type: none"> • Use track number 4 for IP SLA 4. • Use track number 6 for IP SLA 6. <p>The tracked objects should notify D1 if the IP SLA state changes from down to up after 10 seconds, or from up to down after 15 seconds.</p>	2

Task#	Task	Specification	Points
4.2	On D2, create IP SLAs that test the reachability of R3 interface G0/0/1.	<p>Create two IP SLAs.</p> <ul style="list-style-type: none"> • Use SLA number 4 for IPv4. • Use SLA number 6 for IPv6. <p>The IP SLAs will test availability of R3 E1/0 interface every 5 seconds.</p> <p>Schedule the SLA for immediate implementation with no end time.</p> <p>Create an IP SLA object for IP SLA 4 and one for IP SLA 6.</p> <ul style="list-style-type: none"> • Use track number 4 for IP SLA 4. • Use track number 6 for IP SLA 6. <p>The tracked objects should notify D1 if the IP SLA state changes from down to up after 10 seconds, or from up to down after 15 seconds.</p>	2

4.3	On D1, configure HSRPv2.	<p>D1 is the primary router for VLANs 100 and 102; therefore, their priority will also be changed to 150.</p> <p>Configure HSRP version 2.</p> <p>Configure IPv4 HSRP group 104 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.XY.100.254. • Set the group priority to 150. • Enable preemption. • Track object 4 and decrement by 60. <p>Configure IPv4 HSRP group 114 for VLAN 101:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.XY.101.254. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv4 HSRP group 124 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.XY.102.254. • Set the group priority to 150. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv6 HSRP group 106 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Set the group priority to 150. • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 116 for VLAN 101:</p>	8
-----	--------------------------	---	---

Task#	Task	Specification	Points
		<ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 126 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Set the group priority to 150. • Enable preemption. • Track object 6 and decrement by 60. 	

	<p>On D2, configure HSRPv2.</p>	<p>D2 is the primary router for VLAN 101; therefore, the priority will also be changed to 150.</p> <p>Configure HSRP version 2.</p> <p>Configure IPv4 HSRP group 104 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.XY.100.254. • Enable preemption. • Track object 4 and decrement by 60. <p>Configure IPv4 HSRP group 114 for VLAN 101:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.XY.101.254. • Set the group priority to 150. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv4 HSRP group 124 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.XY.102.254. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv6 HSRP group 106 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 116 for VLAN 101:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Set the group priority to 150. 	
--	---------------------------------	---	--

Task#	Task	Specification	Points
		<ul style="list-style-type: none"> • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 126 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Enable preemption. • Track object 6 and decrement by 60. 	

Paso 4.1: En D1, cree IP SLAs que prueben la accesibilidad de la interfaz R1 G1/0

```

switch D1
ip sla 4 - Crea el SLA
icmp-echo 10.63.10.1 - define el destino y la fuente
frequency 5 - define cada cuanto segundo
exit
ip sla 6 - Crea el SLA
icmp-echo 2001:db8:100:1010::1
frequency 5
exit
ip sla schedule 4 life forever start-time now
ip sla schedule 6 life forever start-time now
track 4 ip sla 4 - crea el objeto para saber si down o up
delay down 10 up 15 - se dan los retardos solicitados
exit
track 6 ip sla 6
delay down 10 up 15
exit

```

Paso 4.2: En D2, cree IP SLAs que prueben la accesibilidad de la interfaz R3 G1/0

```

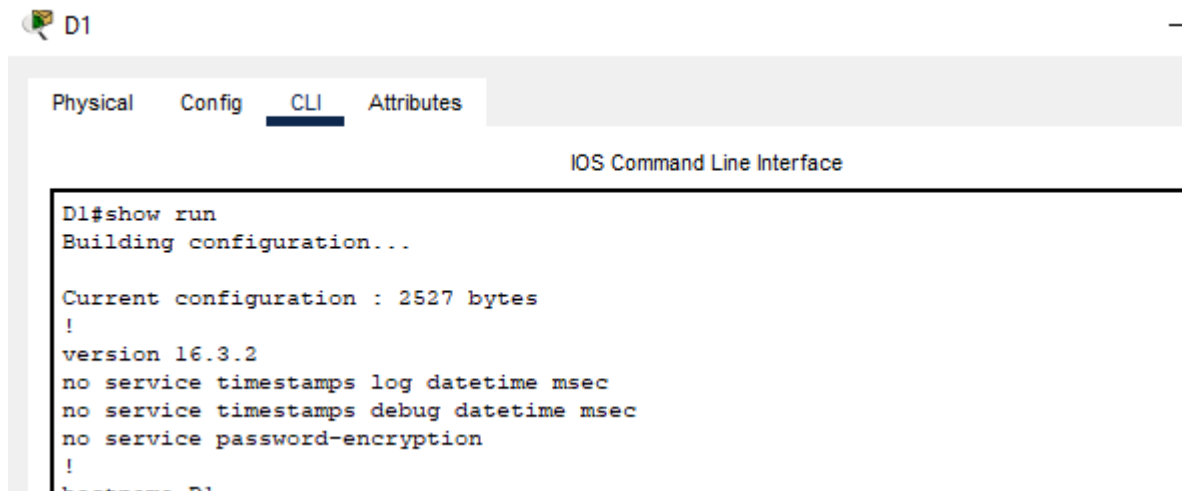

switch D2

```

```

ip sla 4
icmp-echo 10.63.11.1
frequency
exit
ip sla 6
icmp-echo 2001:db8:100::1011::1
frequency
exit
ip sla schedule 4 life forever start-time now
ip sla schedule 6 life forever start-time now
track 4 ip sla 4
delay down 10 up 15
exit
track 6 ip sla 6
delay down 10 up 15
exit

```

```

Paso 4.3: En D1 configure HSRPv2

Switch D1:

```

interface vlan 100
standby version 2 - active la version 2 para ipv6
standby 104 ip 10.63.100.254 - crea el grupo con la ip virtual

```

```
standby 104 priority 150 - se cambia la prioridad defecto de 100
standby 104 preempt - sera el equipo principal
standby 104 track 4 decrement 60 - /rastrea el objeto 4
standby 106 ipv6 auticonfig
standby 106 priority 150
standby 106 preempt
standby 106 track 6 decrement 60
exit
interface vlan 101
standby version 2
standby 114 ip 10.78.101.254
standby 114 preempt
standby 114 track 4 decrement 60
standby 116 ipv6 auticonfig
standby 116 preempt
standby 116 track 6 decrement 60
exit
interface vlan 102
standby version 2
standby 124 ip 10.78.102.254
standby 124 priority 150
standby 124 preempt
standby 124 track 4 decrement 60
standby 126 ipv6 auticonfig
standby 126 priority 150
standby 126 preempt
standby 126 track 6 decrement 60
exit
end
```

Paso 4.4: En D2 configure HSRPv2

```
Switch D2:
interface vlan 100
standby version 2
standby 104 ip 10.63.100.254
```

```
standby 104 preempt
standby 104 track 4 decrement 60
standby 106 ipv6 autoconfig
standby 106 preempt
standby 106 track 6 decrement 60
exit
interface vlan 101
standby version 2
standby 114 ip 10.78.101.254
standby 114 priority 150
standby 114 preempt
standby 114 track 4 decrement 60
standby 116 ipv6 autoconfig
standby 116 priority 150
standby 116 preempt
standby 116 track 6 decrement 60
exit
interface vlan 102
standby version 2
standby 124 ip 10.78.102.254
standby 124 preempt
standby 124 track 4 decrement 60
standby 126 ipv6 autoconfig
standby 126 preempt
standby 126 track 6 decrement 60
exit
end
```

CONCLUSIONES

Por medio de este documento se describe como utilizar Cisco Packet Tracer; para generar la configuración básica de un router, un switch en sus diferentes topologías.

Por medio de esta actividad se pudo concluir que; para configurar un puerto de un switch de un enlace troncal; se utiliza el comando de Switchport mode trunk, por medio de este comando la interfaz cambia a un estado de modo de enlace troncal permanente, es el único método que se utiliza para la configuración de enlaces troncales.

Se implemento la configuración del protocolo OSPF, cada direccionador o sistema del área genera una base de datos gracias al LSA, es un paquete con información el cual calcula una extensión de vía más corta, siendo esta la raíz, utilizando el algoritmo SPF.

Por último, reconozco que, a pesar de los inconvenientes presentados en esta actividad, se tuvo un acompañamiento asertivo por parte de los diferentes tutores; para así lograr los mejores resultados durante lo largo del proceso.
