INGENIERIA DE SISTEMAS
UBR CUBARA BOYACA
Junio de 2013

CASO DE ESTUDIO CCNA1 Y CCNA2

GRUPO:

203091_13

LEONARDO NIÑO CARREÑO

CC. 79'606.844

MONOGRAFIA

PARA OPTAR AL TÍTULO DE: INGENIERO DE SISTEMAS

TUTOR: ING. JUAN CARLOS VESGA

CUBRÁ BOYACÁ; COLOMBIA

Junio de 2013

DEDICATORIA

Dedico esta monografía primeramente a “Dios”

Por permitirme un logro más en la vida

A mí amada esposa Jackeline y

a mis hijos David, Johan y Michel

Por su apoyo incondicional en el transcurrir de la carrera.

JUSTIFICACION

Las redes han transformado el desarrollo administrativo y tecnológico de las diferentes empresas, siendo una de las bases fundamentales en el desarrollo a nivel global, en este caso de estudio el autor aplicara todos los conocimientos adquiridos referentes a las redes LAN y WAN, teniendo como base la información suministrada por la empresa COMERCIANTES S.A., y se realizó la respectiva simulación en Packet Tracer, y se revisó la respectivas conexiones de los dispositivos instalados.

Es de anotar que dentro del proceso de aprendizaje se adquirieron conocimientos muy importantes, llevándonos al estudio de la gran red, el Internet; siendo esta una herramienta transcendental, y base de nuestro diario vivir.

Con el desarrollo del presente trabajo el autor aplicara los protocolos OSPF, donde es importante el traslado de PDU en la topología, como es en las redes LAN y las WAN.

OBJETIVOS

- Diseñar e implementar una red WAN conforme a los datos suministrados por la empresa COMERCIANTES S.A
- Realizar la configuración y funcionamiento de la red WAN virtual mediante la simulación teniendo como base Packet tracer.
- Comprobar el correcto funcionamiento de cada uno de los componentes de la red realizando pruebas de conexión en cada dispositivo.
- Realizar las pruebas correspondientes como los ping y trazas y sacar la información de cada uno de las configuraciones.
- Diseñar y documentar un esquema de direccionamiento según los requisitos.
- Aplicar una configuración básica a los dispositivos.
- Configurar una prioridad de routers y RID.
- Configurar el enrutamiento OSPF
- Desactivación de las actualizaciones de enrutamiento en las interfaces adecuadas.
- Verificación de la completa conectividad entre todos los dispositivos de la topología.

METODOLOGÍA

CASO DE ESTUDIO CCNA 1

Una empresa denominada COMERCIANTES S.A. desea implementar una red WAN acorde con la estructura que se ilustra en la siguiente figura.

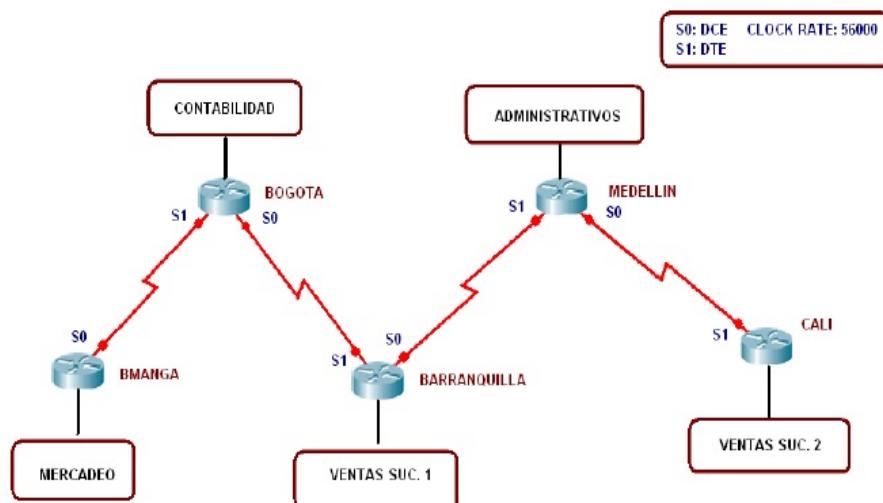

Ilustración 1. Red WAN caso de estudio CCNA1

La cantidad de host requeridos por cada una de las LAN es la siguiente:

Contabilidad: 15

Mercadeo: 10

Ventas Sucursal 1: 30

Ventas Sucursal 2: 40

Administrativos: 25

Se desea establecer cada uno de los siguientes criterios:

Protocolo de enrutamiento: RIP Versión 2

Todos los puertos seriales 0 (S0) son terminales DCE

Todos los puertos seriales 1 (S1) son terminales DTE

Definir la tabla de direcciones IP indicando por cada subred los siguientes elementos:

Por cada LAN

1. Dirección de Red
2. Dirección IP de Gateway
3. Dirección IP del Primer PC
4. Dirección IP del último PC
5. Dirección de Broadcast
6. Máscara de Subred

Por cada conexión serial

1. Dirección de Red
2. Dirección IP Serial 0 (Indicar a qué Router pertenece)
3. Dirección IP Serial 1 (Indicar a qué Router pertenece)
4. Dirección de Broadcast
5. Máscara de Subred

En cada Router configurar:

1. Nombre del Router (Hostname)
2. Direcciones IP de las Interfaces a utilizar
3. Por cada interface utilizada, hacer uso del comando DESCRIPTION con el fin de indicar la función que cumple cada interface. Ej. Interfaz de conexión con la red LAN Mercadeo.
4. Establecer contraseñas para: CON 0, VTY, ENABLE SECRET. Todas con el Password: CISCO
5. Protocolo de enrutamiento a utilizar: RIP Versión 2

Se debe realizar la configuración de la misma mediante el uso de Packet Tracer, los routers deben ser de referencia 1841 y los Switches 2950. Por cada subred se deben dibujar solamente dos Host identificados con las direcciones IP correspondientes al primer y último PC acorde con la cantidad de equipos establecidos por subred. El trabajo debe incluir toda la documentación correspondiente al diseño, copiar las configuraciones finales de cada router mediante el uso del comando Show Running-config, archivo de simulación en Packet Tracer y verificación de funcionamiento de la red mediante el uso de comandos: Ping y Traceroute.

SOLUCION DEL CASO DE ESTUDIO CCNA1

DIRECCIONAMIENTO LAN CCNA1

LAN	DIRECCIÓN DE RED	MÁSCARA DE SUBRED	GATEWAY	PRIMER HOST	ULTIMO HOST	DIRECCIÓN DE BROADCAST
Ventas Suc2	192.168.1.0	255.255.255.192	192.168.1.1	192.168.1.2	192.168.1.41	192.168.1.63
Ventas suc1	192.168.2.0	255.255.255.192	192.168.2.1	192.168.2.2	192.168.2.31	192.168.2.63
Administrativos	192.168.3.0	255.255.255.224	192.168.3.1	192.168.3.2	192.168.3.26	192.168.3.31
Contabilidad	192.168.4.0	255.255.255.224	192.168.4.1	192.168.4.2	192.168.4.16	192.168.4.31
Mercadeo	192.168.5.0	255.255.255.240	192.168.5.1	192.168.5.2	192.168.5.11	192.168.5.15

Tabla 1. Direccionamiento de red LAN

DIRECCIONAMIENTO CONEXIÓN SERIAL ENTRE SUBREDES 172.20.1.0

Ping a 192.168.1.41

The screenshot shows a Windows-style desktop with several open windows. In the foreground, a terminal window titled "Símbolo del Sistema" is active, displaying the output of a ping command to the IP address 192.168.1.41. The terminal window has tabs at the top: "Físico", "Config", "Escritorio", and "Software/Services". The "Software/Services" tab is currently selected. The terminal output shows two successful replies from the target IP, followed by statistics for four sent packets (three received, one lost) with round-trip times ranging from 17ms to 26ms and an average of 23ms. Below the statistics, another ping command is issued, resulting in four successful replies with round-trip times ranging from 20ms to 33ms and an average of 26ms. The terminal prompt "PC>" is visible at the bottom. The desktop background features a collage of various people's faces.

CASO DE ESTUDIO CCNA 2 EXPLORATION

Enunciado Principal del caso de estudio

Se desea diseñar todo el esquema de enrutamiento para la topología que se ilustra en la siguiente figura, acorde con las pautas establecidas en cada una de las tareas que se definen a continuación. El estudiante deberá realizar el diseño completo y documentarlo indicando paso a paso la solución del mismo y las estrategias que utilizó para alcanzar el objetivo.

Diagrama de topología

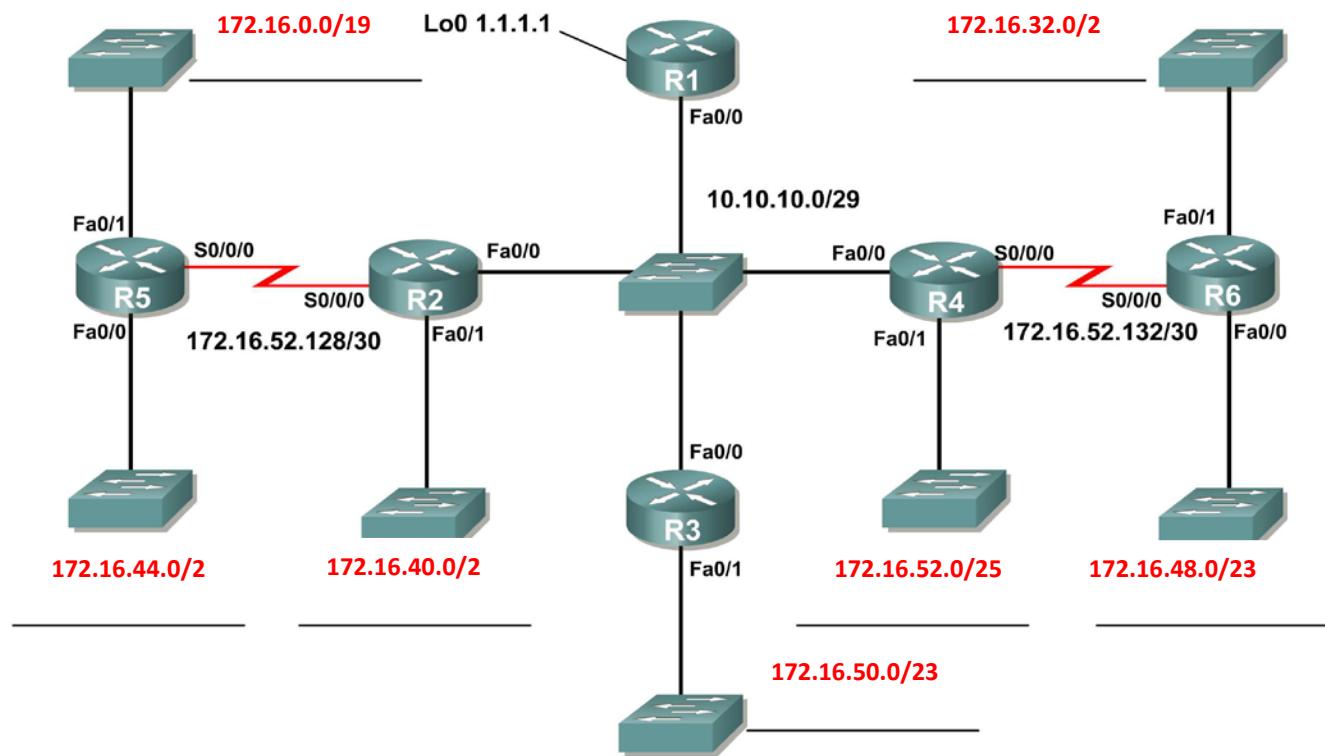

Ilustración 5. Diagrama de Topología CCNA2

Diseño y documentación de un esquema de direccionamiento

Utilice la 172.16.0.0/16 para crear un esquema de direccionamiento eficiente que cumpla los siguientes requisitos:

Nombre de host	Interfaz	Cantidad de hosts
R5	Fa0/1	6000
R6	Fa0/1	2000
R2	Fa0/1	1000
R5	Fa0/0	800
R3	Fa0/1	400
R6	Fa0/0	500
R4	Fa0/1	120

Tabla 13. Documentación de Esquema de Direccionamiento

NOTA: observe que se han establecido las direcciones IP correspondientes a la interfaz Fa0/0 en los routers R1, R2, R3 y R4 tal como se ilustra en la siguiente tabla.

DISPOSITIVO	INTERFAZ	DIRECCION IP	MASCARA DE SUBRED
R1	Fa0/0	10.10.10.1	255.255.255.248
	Loopback0	1.1.1.1	255.255.255.255
R2	Fa0/0	10.10.10.2	255.255.255.248
	Fa0/1	172.16.40.1	255.255.252.0
	S0/0/0	172.16.52.130	255.255.255.252
R3	F0/0	10.10.10.3	255.255.255.248
	Fa0/1	172.16.50.1	255.255.254.0

DISPOSITIVO	INTERFAZ	DIRECCION IP	MASCARA DE SUBRED
R4	Fa0/0	10.10.10.4	255.255.255.248
	Fa0/1	172.16.52.1	255.255.255.128
	S0/0/0	172.16.52.133	255.255.255.252
R5	Fa0/0	172.16.44.1	255.255.252.0
	Fa0/1	172.16.0.1	255.255.224.0
	S0/0/0	172.16.52.129	255.255.255.252
R6	Fa0/0	172.16.48.1	255.255.254.0
	Fa0/1	172.16.32.1	255.255.248.0
	S0/0/0	172.16.52.134	255.255.255.252

Tabla 14. Tabla de direccionamiento de Router

IDENTIFICACION DE VLSM, PARA DIRECCIONES IP

Se debe tener en cuenta que para establecer las direcciones IP para cada subred debe hacer uso de VLSM e identificar para cada una de ellas las siguientes direcciones IP:

1. Dirección de Subred
2. Dirección de Gateway
3. Dirección IP del primer PC de la subred
4. Dirección IP de último PC requerido en la subred. (Por ejemplo: Si la subred posee 800 host, cuál será la dirección IP del Host 800)
5. Dirección de Broadcast
6. Máscara de Subred

SUBRED	No HOST	N	DESCRIPCION	DIRECCION IP	MASCARA DE SUBRED
R5-Fa0/1	6000	13	DIR. SUBRED	172.16.0.0	255.255.224.0
			GATEWAY	172.16.0.1

			Router 6 S0	172.16.52.134	
			BROADCAST	172.16.52.135	

Tabla 15. Direccionamiento VLSM

Aplicación de una configuración básica.

Paso 1: En cada router, utilice el siguiente cuadro para completar las configuraciones básicas del router.

Contraseña de consola	Contraseña de VTY	Contraseña secreta de enable	Frecuencia de reloj (si corresponde)
cisco	cisco	cisco	56000

Tabla 16. Configuraciones Básicas del Router.

Configurar el enrutamiento OSPF

Paso 1: Configurar el enrutamiento OSPF en cada router.

Paso 2: Verifique que se hayan aprendido todas las rutas.

Ajuste refinado de OSPF

Paso 1: Utilice las siguientes pautas para completar esta tarea:

- ❖ R1 nunca participará en una elección DR/BDR.
- ❖ R2 siempre será el DR

R2 siempre será el DR

```

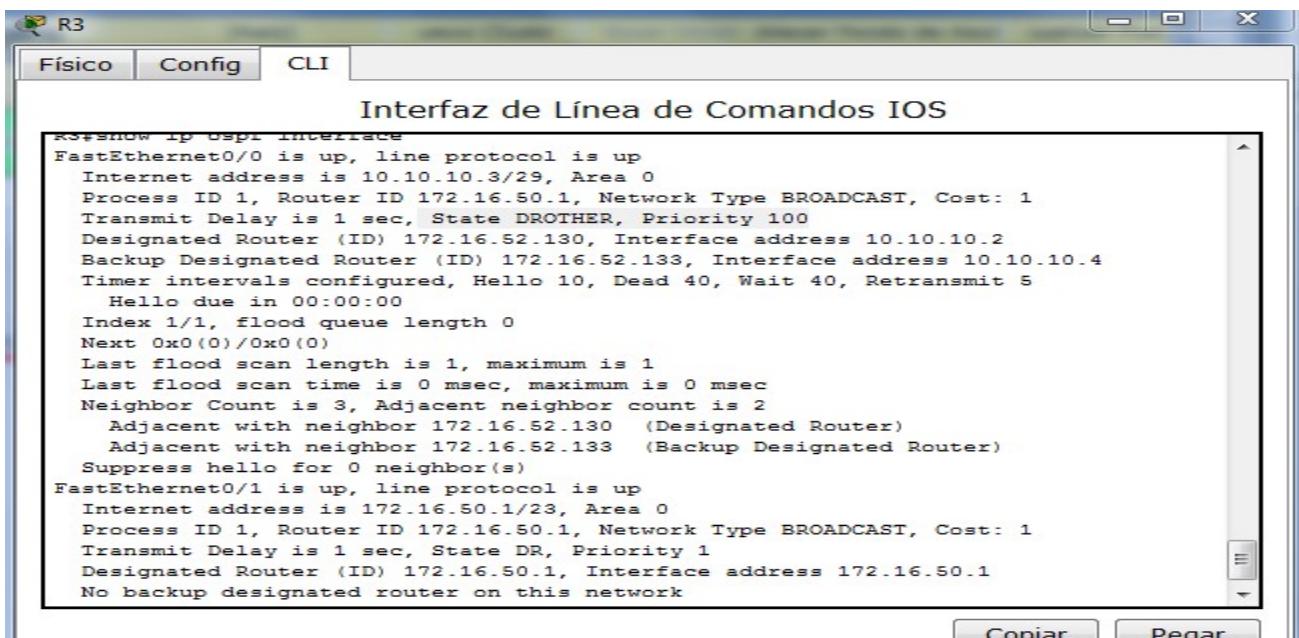

R2

R6#

CONCLUSIONES

Se realizaron las diferentes conexiones de la red COMERCIANTE S.A., con la herramienta de simulación Packet tracert.

Se confirmó la conectividad con él envío de PDU, también con el envío de ping a las diferentes PC.

El comando Tracert es una herramienta fundamental donde por medio de ella se puede comprobar los recorridos que hacen los PDU.

Se tomaran evidencias de la conexión de cada uno de los Router correspondientes a cada ciudad.

Los protocolos de enrutamiento son la base fundamental en el funcionamiento de la simulación de la red en Packt Tracer y el envío de paquetes a través de ella, donde se puede evidenciar el hello, para encontrar el mejor camino y llegar al destino.

La implementación de VLSM, es muy importante ya que nos permite realizar subdivisiones de una subred o sea permite crear direcciones de red adicionales utilizando una máscara de acuerdo a nuestra necesidad.
