## **INTRODUCCIÓN**

Demostrar que se tienen las capacidades necesarias para ejercer la profesión de Ingenieros de Telecomunicaciones es de fundamental importancia para Universidad Nacional Abierta y a Distancia UNAD, por ello en el desarrollo de este trabajo se evidencia la comprensión y solución de problemas relacionado con diversos aspectos de Networking.

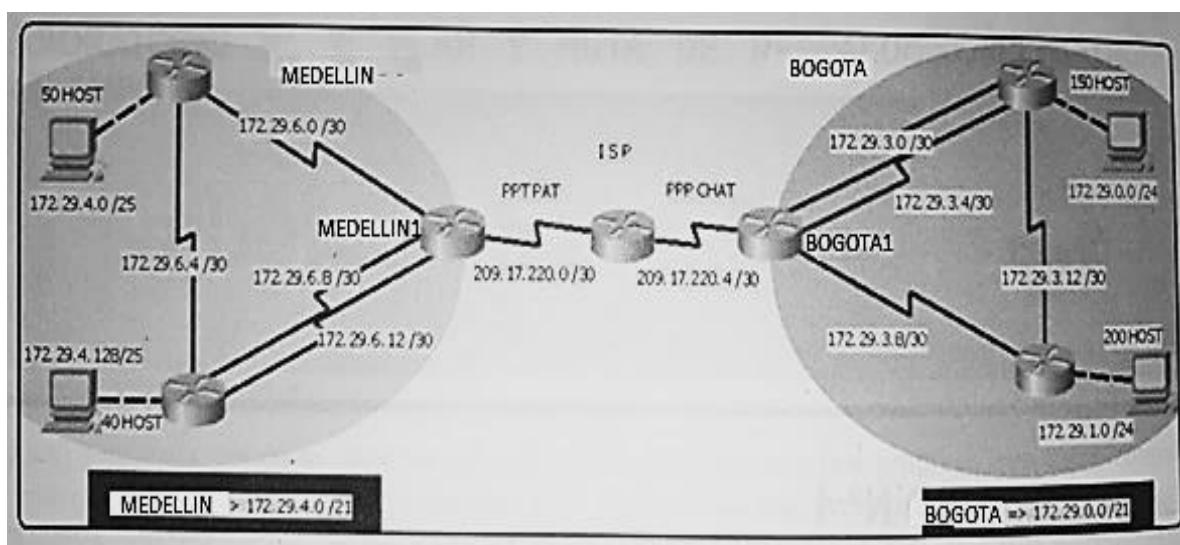

En dos escenarios, propuestos mediante la metodología de Aprendizaje Basado en Problemas (ABP), se demostrará la aprehensión de conocimientos y la adquisición de habilidades para el futuro desempeño como profesionales de las telecomunicaciones, así también se demuestra la destreza en el manejo de herramientas de simulación como Packet Tracer.

Por último es importante mencionar que las Telecomunicaciones son una rama las ingenierías que actualmente se encuentra en auge, lo que exige de los próximos profesionales el mayor compromiso e innovación, demostrando ser propositivo e ingenioso para exponer soluciones a diversas situaciones que puedan presentarse y que contribuyan al mejoramiento de la calidad de vida y la optimización de procesos.

## 1. DESARROLLO DE LOS ESCENARIOS

### 1.1. ESCENARIO 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá y Medellín, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Este escenario plantea el uso de RIP como protocolo de enrutamiento, considerando que se tendrán rutas por defecto redistribuidas; asimismo, habilitar el encapsulamiento PPP y su autenticación.

Los routers Bogota2 y medellin2 proporcionan el servicio DHCP a su propia red LAN y a los routers 3 de cada ciudad.

Debe configurar PPP en los enlaces hacia el ISP, con autenticación.

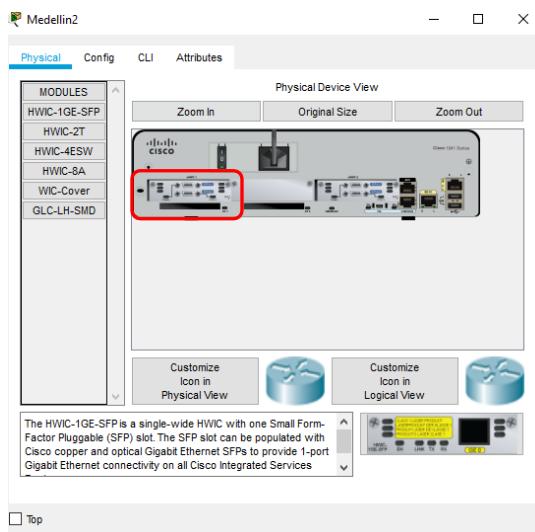

Debe habilitar NAT de sobrecarga en los routers Bogota1 y medellin1.

## 1.2. DESARROLLO

Como trabajo inicial se debe realizar lo siguiente.

Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).

- Se deben agregar puertos seriales

- Asignación de nombre

```
Router>enable  
Router#configure terminal  
Enter configuration commands, one per line. End with CNTL/Z.  
Router(config)#hostname Medellin1
```

- Asignación de contraseña EXEC privilegiado:

```
Medellin1>enable  
Medellin1#configure terminal  
Enter configuration commands, one per line. End with CNTL/Z.  
Medellin1(config)#enable secret class  
Medellin1(config)#exit
```

- Asignación de contraseñas de EXEC de usuario y líneas VTY

```
Medellin1(config)#line console 0  
Medellin1(config-line)#password cisco  
Medellin1(config-line)#login  
Medellin1(config-line)#exit  
Medellin1(config)#line vty 0 15  
Medellin1(config-line)#password cisco  
Medellin1(config-line)#login  
Medellin1(config-line)#exit
```

- Cifrado de contraseñas

```
Medellin1(config)#service password-encryption
Medellin1(config)#exit
```

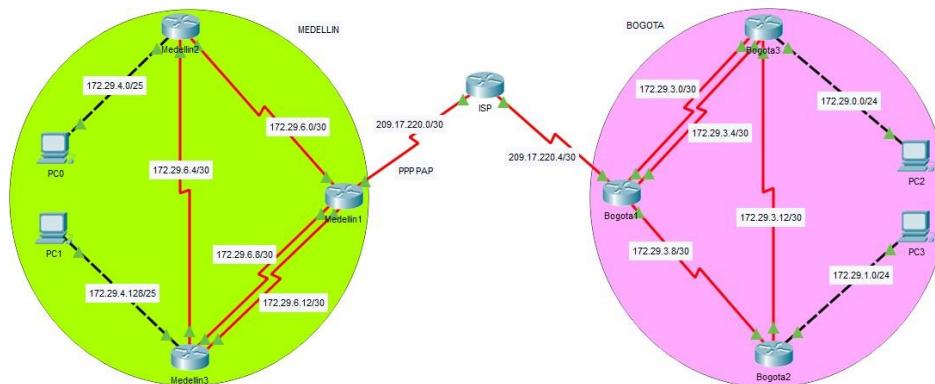

- Aviso de seguridad en la red

```
Medellin1#configure terminal
Medellin1(config)#banner motd #Solo acceso autorizado#
Medellin1(config)#exit
```

- Guardar configuraciones en NVRAM

```
Medellin1#copy running-config startup-config
```

Realizar la conexión física de los equipos con base en la topología de red

Configurar la topología de red, de acuerdo con las siguientes especificaciones.

### 1.2.1. Parte 1: Configuración de enrutamiento

- Configurar el enrutamiento en la red usando el protocolo RIP versión 2, declare la red principal, desactive la sumarización automática.  
RIP debe configurarse en las zonas Medellín y Bogotá porque en el ISP se utilizará otro protocolo de enrutamiento dinámico o estático.

- Asignación de direcciones Ip's en ISP y enrutamiento RIP

```

ISP(config)#int s0/1/1
ISP(config-if)#ip address 209.17.220.1 255.255.255.252
ISP(config-if)#clock rate 4000000
ISP(config-if)#no shutdown

ISP(config-if)#int s0/1/0
ISP(config-if)#ip address 209.17.220.5 255.255.255.252
ISP(config-if)#clock rate 4000000
ISP(config-if)#no shutdown

```

- Asignación de direcciones Ip's en Medellin1 y enrutamiento RIP

### IP's

```

Medellin1(config)#int s0/0/1
Medellin1(config-if)#ip address 209.17.220.2 255.255.255.252
Medellin1(config-if)#no shutdown

Medellin1(config-if)#int s0/0/0
Medellin1(config-if)#ip address 172.29.6.1 255.255.255.252
Medellin1(config-if)#clock rate 4000000
Medellin1(config-if)#no shutdown

Medellin1(config-if)#int s0/1/1
Medellin1(config-if)#ip address 172.29.6.9 255.255.255.252
Medellin1(config-if)#clock rate 4000000
Medellin1(config-if)#no shutdown

Medellin1(config-if)#int s0/1/0
Medellin1(config-if)#ip address 172.29.6.13 255.255.255.252
Medellin1(config-if)#clock rate 4000000
Medellin1(config-if)#no shutdown

```

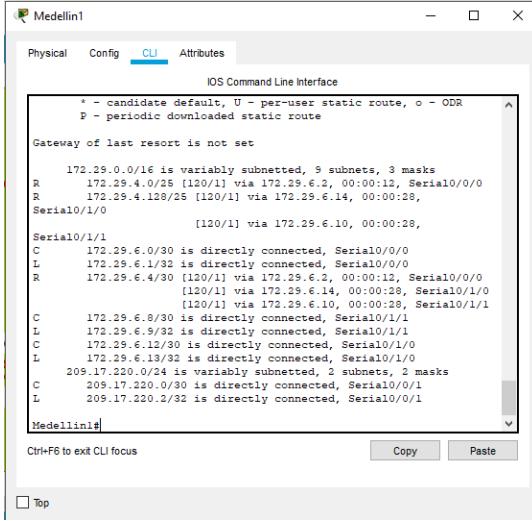

### RIP

```

Medellin1(config)#router rip Medellin1(config-
router)#version 2 Medellin1(config-router)#no
auto-summary
Medellin1(config-router)#do show ip route connected

## RUTA POR DEFECTO

```

Medellin1(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.1
Medellin1(config)#router rip
Medellin1(config-router)#default-information originate

Bogota1(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.5
Bogota1(config)#router rip
Bogota1(config-router)#default-information originate

```

Para comprobar se hace un show ip route desde los otros router, así se verifica que ya conocen una ruta por la cual conectar a internet.

```

- b) Verificar el balanceo de carga que presentan los routers.

Se presenta en los routers que comparten Medellín3 y Bogotá3, donde para acceder a internet tienen dos interfaces.

- c) Obsérvese en los routers Bogotá1 y Medellín1 cierta similitud por su ubicación, por tener dos enlaces de conexión hacia otro router y por la ruta por defecto que manejan.
- d) Los routers Medellín2 y Bogotá2 también presentan redes conectadas directamente y recibidas mediante RIP.
- e) Las tablas de los routers restantes deben permitir visualizar rutas redundantes para el caso de la ruta por defecto.
- Son las que se especificaron en el punto b, donde se halle más de una ruta para acceder a internet.
- f) El router ISP solo debe indicar sus rutas estáticas adicionales a las directamente conectadas.

```

### **1.2.3. Parte 3: Desactivar la propagación del protocolo RIP**

- a) Para no propagar las publicaciones por interfaces que no lo requieran se debe deshabilitar la propagación del protocolo RIP, en la siguiente tabla se indican las interfaces de cada router que no necesitan desactivación.

ROUTER	INTERFAZ
Bogota1	SERIAL0/0/1; SERIAL0/1/0; SERIAL0/1/1
Bogota2	SERIAL0/0/0; SERIAL0/0/1
Bogota3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
Medellín1	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/1
Medellín2	SERIAL0/0/0; SERIAL0/0/1
Medellín3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
ISP	No lo requiere

### **1.2.4. Parte 4: Verificación del protocolo RIP**

- a) Verificar y documentar las opciones de enrutamiento configuradas en los routers, como el passive interface para la conexión hacia el ISP, la versión de RIP y las interfaces que participan de la publicación entre otros datos.  
Las siguientes interfaces fueron configuradas como interfaces pasivas, (este aspecto se documentó en pasos anteriores)  
s/0/0/1 Medellín1 que conecta con ISP  
s/0/0/0 Bogota1 que conecta con ISP  
Al estar conectados al ISP su configuración se hacía con un protocolo diferente a RIP.  
G0/0 Bogota2, G0/0 Bogota3, G0/0 Medellin2, G0/0 Medellin3 también se configuraron pasivas porque en sus terminales no conectan con ningún otro router.
- b) Verificar y documentar la base de datos de RIP de cada router, donde se informa de manera detallada de todas las rutas hacia cada red.

C   172.29.3.12/30 is directly connected, Serial0/0/1
L   172.29.3.14/32 is directly connected, Serial0/0/1

```

### 1.2.5. Parte 5: Configurar el encapsulamiento y autenticación PPP

- a) Según la topología se requiere que el enlace Medellín1 con ISP sea configurado con autenticación PAP.

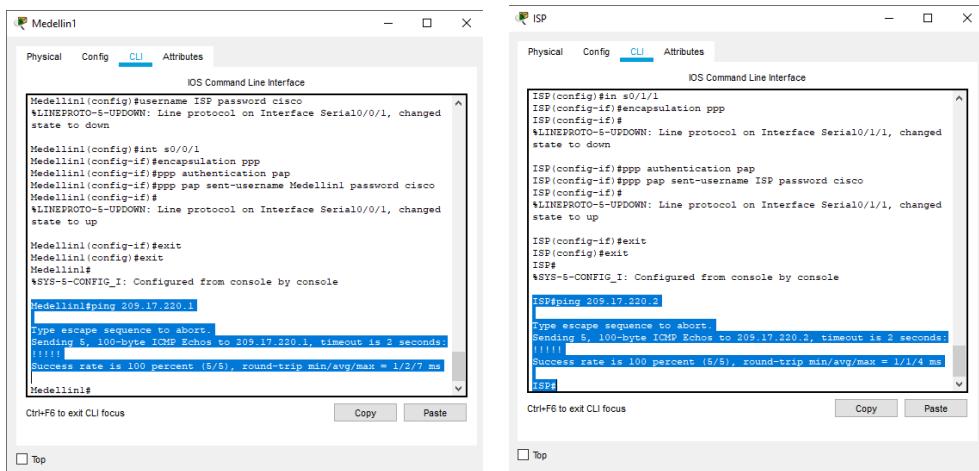

Como ya se habían asignado los nombres de cada router, se procede a introducir los siguientes comandos para activar la autenticación PAP entre ISP y Medellin1.

#### PAP

```
ISP(config)#username Medellin1 password cisco
ISP(config)#int s0/1/1
ISP(config-if)#encapsulation ppp
ISP(config-if)#
ISP(config-if)#ppp authentication pap
ISP(config-if)#ppp pap sent-username ISP password cisco

Medellin1(config)#username ISP password cisco
Medellin1(config)#int s0/0/1 Medellin1(config-
if)#encapsulation ppp Medellin1(config-if)#ppp
authentication pap
Medellin1(config-if)#ppp pap sent-username Medellin1 password cisco
```

Se comprueba haciendo ping

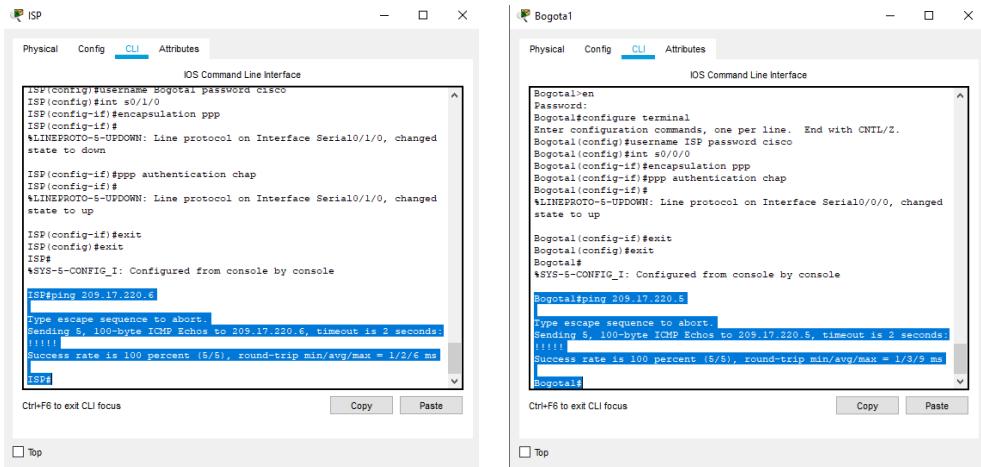

- b) El enlace Bogotá1 con ISP se debe configurar con autenticación CHAP.

### CHAP

```
ISP(config)#username Bogota1 password cisco  
ISP(config)#int s0/1/0  
ISP(config-if)#encapsulation ppp ISP(config-  
if)#ppp authentication chap
```

```
Bogota1(config)#username ISP password cisco  
Bogota1(config)#int s0/0/0  
Bogota1(config-if)#encapsulation ppp  
Bogota1(config-if)#ppp authentication chap
```

```
ISP#ping 209.17.220.5  
Type escape sequence to abort.  
Sending 5, 100-byte ICMP Echos to 209.17.220.5, timeout is 2 seconds:  
!!!!!!  
Success rate is 100 percent (5/5), round-trip min/avg/max = 1/2/6 ms  
ISP#  
  
Bogota1#ping 209.17.220.5  
Type escape sequence to abort.  
Sending 5, 100-byte ICMP Echos to 209.17.220.5, timeout is 2 seconds:  
!!!!!!  
Success rate is 100 percent (5/5), round-trip min/avg/max = 1/3/9 ms  
Bogota1#
```

### 1.2.6. Parte 6: Configuración de PAT

- a) En la topología, si se activa NAT en cada equipo de salida (Bogotá1 y Medellín1), los routers internos de una ciudad no podrán llegar hasta los routers internos en el otro extremo, sólo existirá comunicación hasta los routers Bogotá1, ISP y Medellín1.

En este caso antes de proceder a la configuración, cabe resaltar que la listas de acceso se reducen a la dirección general de la red que se calculó en la summarización de las redes, las cuales son Medellín 172.29.4.0/22 y Bogotá 172.29.0.0/22.

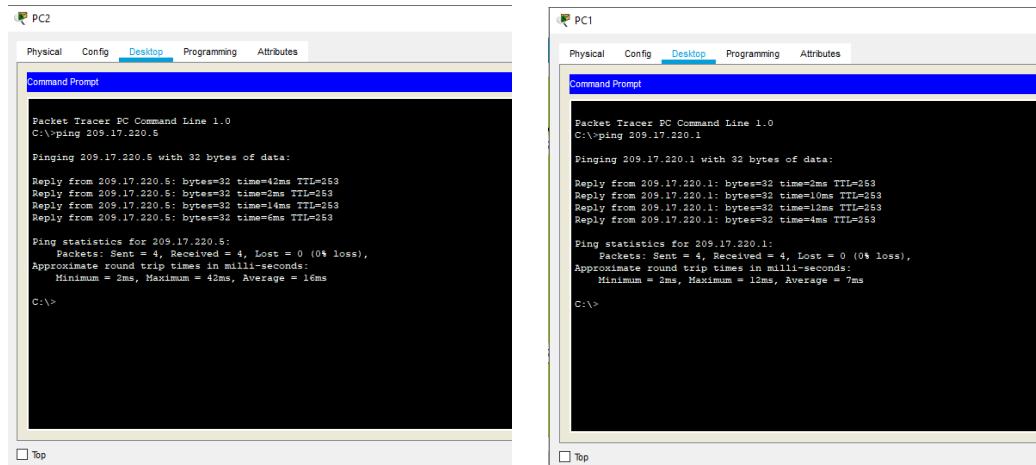

```

Medellin1(config)#ip nat inside source list 1 interface s0/0/1 overload
Medellin1(config)#access-list 1 permit 172.29.4.0 0.0.3.255
Medellin1(config)#int s0/0/1
Medellin1(config-if)#ip nat outside
Medellin1(config-if)#int s0/0/0
Medellin1(config-if)#ip nat inside
Medellin1(config-if)#int s0/1/1
Medellin1(config-if)#ip nat inside
Medellin1(config-if)#int s0/1/0
Medellin1(config-if)#ip nat inside

Bogota1(config)#ip nat inside source list 1 interface s0/0/0 overload
Bogota1(config)#access-list 1 permit 172.29.0.0 0.0.3.255
Bogota1(config)#int s0/0/0
Bogota1(config-if)#ip nat outside
Bogota1(config-if)#int s0/1/0
Bogota1(config-if)#ip nat inside
Bogota1(config-if)#int s0/0/1
Bogota1(config-if)#ip nat inside
Bogota1(config-if)#int s0/1/1
Bogota1(config-if)#ip nat inside

```

Haciendo *ping* desde los pc de cada red al ISP exitoso.

Y si se hace ping entre PC de diferente red el ping falla porque esa es la función de PAT. Para que puedan volver a comunicarse bastaría con desactivar NAT.

PC2

Physical Config Desktop Programming Attributes

Command Prompt

```
Packet Tracer PC Command Line 1.0
C:\>ping 209.17.220.5

Pinging 209.17.220.5 with 32 bytes of data:
Reply from 209.17.220.5: bytes=32 time=4ms TTL=253
Reply from 209.17.220.5: bytes=32 time=2ms TTL=253
Reply from 209.17.220.5: bytes=32 time=1ms TTL=253
Reply from 209.17.220.5: bytes=32 time=6ms TTL=253

Ping statistics for 209.17.220.5:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 2ms, Maximum = 6ms, Average = 4ms

C:\>ping 172.29.4.194

Pinging 172.29.4.194 with 32 bytes of data:
Request timed out.
```

Top

- b) Despu s de verificar lo indicado en el paso anterior proceda a configurar el NAT en el router Medell n1. Compruebe que la traducci n de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la direcci n debe ser traducida autom ticamente a la direcci n de la interfaz serial 0/1/0 del router Medell n1, c mo diferente puerto.

Haciendo *show ip nat translation* se comprueba su correcto funcionamiento, pues los puertos cambian con cada conexi n.

- c) Proceda a configurar el NAT en el router Bogot 1. Compruebe que la traducci n de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la direcci n debe ser traducida autom ticamente a la direcci n de la interfaz serial 0/1/0 del router Bogot 1, c mo diferente puerto.

### 1.2.7. Parte 7: Configuración del servicio DHCP

- Configurar la red Medellín2 y Medellín3 donde el router Medellín 2 debe ser el servidor DHCP para ambas redes Lan.

Lo primero que debemos hacer es crear un grupo de direcciones que serán excluidas de asignarse a posibles host

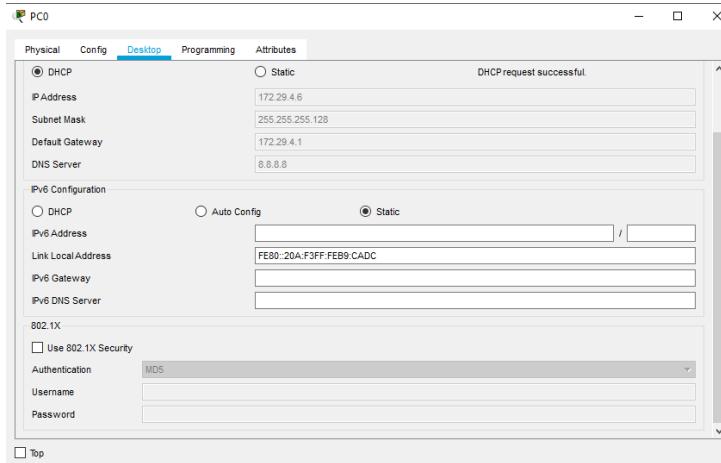

```
Medellin2(config)#ip dhcp excluded-address 172.29.4.1 172.29.4.5  
Medellin2(config)#ip dhcp excluded-address 172.29.4.129 172.29.4.133
```

Se deben crear el pool o banco de direcciones disponibles para ser usadas

```
Medellin2(config)#ip dhcp pool Med2  
Medellin2(dhcp-config)#network 172.29.4.0 255.255.255.128  
Medellin2(dhcp-config)#default-router 172.29.4.1  
Medellin2(dhcp-config)#dns-server 8.8.8.8  
Medellin2(dhcp-config)#exit
```

```
Medellin2(config)#ip dhcp pool Med3  
Medellin2(dhcp-config)#network 172.29.4.128 255.255.255.128  
Medellin2(dhcp-config)#default-router 172.29.4.129  
Medellin2(dhcp-config)#dns-server 8.8.8.8  
Medellin2(dhcp-config)#exit
```

Ahora se debe configurar la pc como DHCP

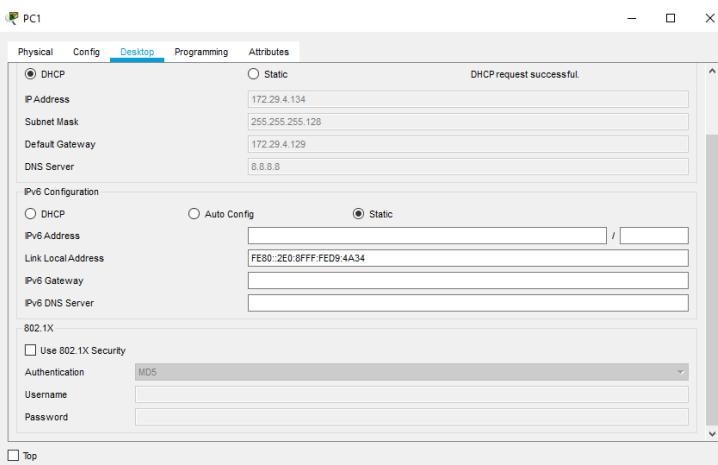

- b) El router Medellín3 deberá habilitar el paso de los mensajes broadcast hacia la IP del router Medellín2.

Para que la PC1 pueda acceder a una dirección DHCP debemos configurar un enlace entre Medellin3 y Medellin2 que es el servidor.

```
Medellin3(config)#int g0/0
Medellin3(config-if)#ip helper-address 172.29.6.5
```

### Comprobando

- c) Configurar la red Bogotá2 y Bogotá3 donde el router Bogota2 debe ser el servidor DHCP para ambas redes Lan.
- d) Configure el router Bogotá1 para que habilite el paso de los mensajes Broadcast hacia la IP del router Bogotá2.

para solucionar estos dos ítems, se repite el proceso anterior para esta parte de la red

```
Bogota2(config)#ip dhcp excluded-address 172.29.1.1 172.29.1.5
Bogota2(config)#ip dhcp excluded-address 172.29.0.1 172.29.0.5
Bogota2(config)#ip dhcp pool Bog2
Bogota2(dhcp-config)#network 172.29.1.0 255.255.255.0
Bogota2(dhcp-config)#default-router 172.29.1.1
Bogota2(dhcp-config)#dns-server 8.8.8.8
Bogota2(dhcp-config)#ip dhcp pool Bog3
Bogota2(dhcp-config)#network 172.29.0.0 255.255.255.0
Bogota2(dhcp-config)#default-router 172.29.0.1
Bogota2(dhcp-config)#dns-server 8.8.8.8

Bogota3(config)#int g0/0
Bogota3(config-if)#ip helper-address 172.29.3.13
```

## Comprobando

The image displays two windows of a network configuration application, labeled PC2 and PC3, side-by-side.

**PC2 Configuration:**

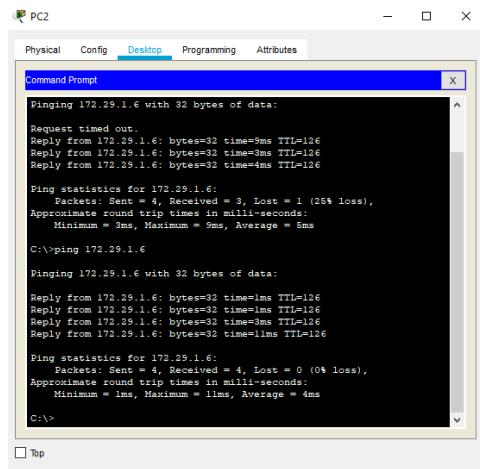

- Physical:** DHCP selected.
- Config:** Static selected, IP Address: 172.29.0.6, Subnet Mask: 255.255.255.0, Default Gateway: 172.29.0.1, DNS Server: 8.8.8.8.
- Desktop:** DHCP selected, IPv6 Address: Auto Config, Link Local Address: FE80::204:9AFF:FE69:62B9, IPv6 Gateway: (empty), IPv6 DNS Server: (empty).
- Programming:** Attributes: DHCP request successful.
- Attributes:** (empty)

**PC3 Configuration:**

- Physical:** DHCP selected.
- Config:** Static selected, IP Address: 172.29.1.6, Subnet Mask: 255.255.255.0, Default Gateway: 172.29.1.1, DNS Server: 8.8.8.8.
- Desktop:** DHCP selected, IPv6 Address: Auto Config, Link Local Address: FE80::290:CFF:FEDE:84D6, IPv6 Gateway: (empty), IPv6 DNS Server: (empty).
- Programming:** Attributes: DHCP request successful.

### 1.3. ESCENARIO 2

Escenario: Una empresa de Tecnología posee tres sucursales distribuidas en las ciudades de Miami, Bogotá y Buenos Aires, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

### 1.4. DESARROLLO

#### 1.4.1. Configurar el direccionamiento IP

Acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario.

Dispositivo/Enlace	Dirección IP	Máscara de subred	Default Gateway	Dirección de IPV6	Gateway IPV6
Internet Server	209.165.200.230	255.255.255.248			
R1 -> R2 (S0/0)	172.31.21.1	255.255.255.252			
R2 -> R1 (S0/1)	172.31.21.2	255.255.255.252			
R2 -> R3 (S0/0)	172.31.23.1	255.255.255.252			
R3 -> R2 (S0/1)	172.31.23.2	255.255.255.252			
R2 -> Internet Server (G0/0)	209.165.200.225	255.255.255.248			
R2 -> Lo0 Web Server	10.10.10.10	255.255.255.255			
R3 -> Lo4	192.168.4.1	255.255.255.0			
R3 -> Lo5	192.168.5.1	255.255.255.0			
R3 -> Lo6	192.168.6.1	255.255.255.0			
S1 Vlan 30, Vlan 40 Vlan 200	192.168.99.2	255.255.255.0			
S3 Vlan 30, Vlan 40 Vlan 200	192.168.99.3	255.255.255.0			
R1 G0/0.30	192.168.30.1	255.255.255.0			
R1 G0/0.40	192.168.40.1	255.255.255.0			
R1 G0/0.200	192.168.200.1	255.255.255.0			

**Configuración básica de los dispositivos:** Se configuran routers y switches según topología y tabla de direccionamiento.

## **2. CONCLUSIONES**

- Al configurar el direccionamiento IP de acuerdo a la topología de red para cada escenario dado se deben escoger con minuciosidad los elementos a emplear según las necesidades, garantizando primeramente que las características físicas de cada dispositivo satisfagan las necesidades planteadas, así mismo se debe prestar especial atención a la asignación de las IP's pues esto es la base de los ejercicios planteados.
- En cada práctica planteada durante el curso y en estas habilidades siempre se enfatizó en la necesidad de asegurar el acceso a las redes mediante claves y contraseñas, aspecto fundamental en el ejercicio de la profesión.
- La consolidación y verificación de conceptos como NAT, PAT, OSPF, DHCP ha sido bastante provechosa en el desarrollo de estas habilidades prácticas, pues son conceptos fundamentales en el diseño de redes.
- La destreza en el manejo de herramientas de simulación resulta fundamental en el futuro ejercicio de la profesión ingenieril, pues estos entornos nos brindan la posibilidad de analizar diversas variables que puedan afectar diferentes diseños de redes.
- La alianza establecida entre la UNAD y CISCO sin lugar a dudas hace que el conocimiento adquirido sea mucho más enriquecedor y de gran utilidad para el ejercicio de la profesión.
