## RESUMEN

La prueba de habilidades prácticas CCNA constituye una estrategia eficaz para verificar la pertinencia y el nivel de comprensión de los temas desarrollados durante el curso, mediante la resolución de las situaciones problema planteadas se puede demostrar el nivel de conocimiento acerca de las redes y su configuración, otro aspecto importante que se aborda en el curso es la implementación de los simuladores, en este caso, la herramienta packet tracer, que es una de las mejores herramientas para la simulación de redes y su respectiva implementación.

## ABSTRACT

The CCNA practical skills test is an effective strategy to verify the relevance and level of apprehension of the topics developed during the course, by solving the problem situations raised, the level of knowledge about networks and their configuration can be demonstrated, Another important aspect addressed in the course is the implementation of the simulators, in this case, the packet tracer tool, which is one of the best tools for simulating networks and their respective implementation.

## INTRODUCCIÓN

En el presente documento el lector puede observar y verificar el desarrollo de los ejercicios que constituyen la prueba de habilidades del curso cisco CCNA, en una primera sección se encuentra el desarrollo del escenario 1 que relaciona una problemática de conectividad entre tres ciudades colombianas, en este escenario se pide que el administrador configure la red implementando todos los protocolos y estándares existentes.

En la segunda sección del documento se encuentra la documentación del desarrollo del escenario 2 que consta de una problemática definida de redes donde se necesita interconexión entre subredes implementando algunas restricciones, de igual forma se evidencia la implementación del simulador packet tracer para el diseño, configuración e implementación de la red.

## OBJETIVOS

### Objetivo general

Verificar la comprensión de la temática desarrollada durante el curso mediante el correcto desarrollo de las pruebas de habilidades prácticas en donde se requiere de la implementación de los estándares de diseño y configuración de redes usando cisco packet tracer

### Objetivos específicos

Interpretar las situaciones problema propuestas para la prueba de habilidades.

Apropiar la temática vista durante el curso

Emplear el simulador cisco packet tracer para el desarrollo de la prueba de habilidades.

## EVALUACIÓN – PRUEBA DE HABILIDADES PRÁCTICAS CCNA

### Descripción de escenarios propuestos para la prueba de habilidades

#### Escenario 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá, Medellín y Cali en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

#### Topología de red

Los requerimientos solicitados son los siguientes:

Parte 1: Para el direccionamiento IP debe definirse una dirección de acuerdo con el número de hosts requeridos.

Parte 2: Considerar la asignación de los parámetros básicos y la detección de vecinos directamente conectados.

Parte 3: La red y subred establecidas deberán tener una interconexión total, todos los hosts deberán ser visibles y poder comunicarse entre ellos sin restricciones.

Parte 4: Implementar la seguridad en la red, se debe restringir el acceso y comunicación entre hosts de acuerdo con los requerimientos del administrador de red.

Parte 5: Comprobación total de los dispositivos y su funcionamiento en la red.

Parte 6: Configuración final.

Ilustración 1: Elementos de la red Escenario 1.

Fuente: Universidad Nacional Abierta y a Distancia.

Ilustración 2: Red escenario 1 con direcciones Ip.

Red escenario 1 con direcciones Ip.

Red escenario 1 con direcciones Ip.

### Desarrollo escenario 1

Como trabajo inicial se debe realizar lo siguiente.

- Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).

Ingresamos en cada uno de los dispositivos Routers y Switches para asignarles la configuración básica.

#### Router 1 BOGOTÁ

```
Router>ena
Router>enable
Router#conf
```

```
Router#conf terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#host na
Router(config)#hostna
Router(config)#hostname BOGOTA
BOGOTA(config)#serv
BOGOTA(config)#service enc
BOGOTA(config)#service encry
BOGOTA(config)#service pass
BOGOTA(config)#service password-encryption
BOGOTA(config)#bann
BOGOTA(config)#banner mot
BOGOTA(config)#banner motd &Solo personal autorizado&
BOGOTA(config)#enab
BOGOTA(config)#enable secr
BOGOTA(config)#enable secret class
BOGOTA(config)#line cons
BOGOTA(config)#line console 0
BOGOTA(config-line)#pass
BOGOTA(config-line)#password cisco
BOGOTA(config-line)#login
BOGOTA(config-line)#logg
BOGOTA(config-line)#logging syn
BOGOTA(config-line)#logging synchronous
BOGOTA(config-line)#line vty 0 15
BOGOTA(config-line)#pass
BOGOTA(config-line)#password cisco
BOGOTA(config-line)#login
BOGOTA(config-line)#logg
BOGOTA(config-line)#logging syn
BOGOTA(config-line)#logging synchronous
BOGOTA(config-line)#no ip dom
BOGOTA(config-line)#no ip domain-lookup
BOGOTA(config)#
```

## ROUTER 2 MEDELLIN

```
Router>ENA
Router>ENAbLe
Router#CONF T
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#
Router(config)#hostna
```

```
Router(config)#hostname MEDELLN
MEDELLN(config)#no ip domain-lookup
MEDELLN(config)#serv
MEDELLN(config)#service pass
MEDELLN(config)#service password-encryption
MEDELLN(config)#ena
MEDELLN(config)#enable sec
MEDELLN(config)#enable secret class
MEDELLN(config)#bann
MEDELLN(config)#banner motd
MEDELLN(config)#banner motd &SOLO PERSONAL AUTORIZADO&
MEDELLN(config)#line console 0
MEDELLN(config-line)#pass
MEDELLN(config-line)#password cisco

SW-CALI(config-line)#
```

- Realizar la conexión física de los equipos con base en la topología de red

**Ilustración 3: Topología de red escenario 1**

Configurar la topología de red, de acuerdo con las siguientes especificaciones.

**Parte 1: Asignación de direcciones IP:**

- Se debe dividir (subnetear) la red creando una segmentación en ocho partes, para permitir crecimiento futuro de la red corporativa.

Tabla 1: Tabla de subneteo de la red.

TABLA DE SUBNETEO			
Nº	SUBRED	DIRECCION IP	MASCARA DE SUBRED
1	BOGOTA	192.168.1.0	255.255.255.224
2	MEDELLIN	192.168.1.32	255.255.255.224
3	CALI	192.168.1.64	255.255.255.224
4	BOGOTÁ-MEDELLIN	192.168.1.96	255.255.255.224
5	BOGOTÁ-CALI	192.168.1.128	255.255.255.224
6	SEXTA RED	192.168.1.160	255.255.255.224
7	SEPTIMA RED	192.168.1.192	255.255.255.224
8	OCTAVA RED	192.168.1.224	255.255.255.224

b. Asignar una dirección IP a la red.

Tabla 2: Direccionamiento IP

N°	SUBRED	DIRECCION IP
1	BOGOTA	192.168.1.0
2	MEDELLIN	192.168.1.32
3	CALI	192.168.1.64
4	BOGOTÁ-MEDELLIN	192.168.1.96
5	BOGOTÁ-CALI	192.168.1.128
6	SEXTA RED	192.168.1.160
7	SEPTIMA RED	192.168.1.192
8	OCTAVA RED	192.168.1.224

Parte 2: Configuración Básica.

a. Completar la siguiente tabla con la configuración básica de los routers, teniendo en cuenta las subredes diseñadas.

Tabla 3: Configuración básica de Routers.

	R1	R2	R3
Nombre de Host	MEDELLIN	BOGOTA	CALI
Dirección de Ip en interfaz Serial 0/0	192.168.1.99	192.168.1.98	192.168.1.131
Dirección de Ip en interfaz Serial 0/1		192.168.1.130	
Dirección de Ip en interfaz FA 0/0	192.168.1.33	192.168.1.1	192.168.1.65
Protocolo de enrutamiento	Eigrp	Eigrp	Eigrp
Sistema Autónomo	200	200	200
Afirmaciones de red	192.168.1.0	192.168.1.0	192.168.1.0

c. Verificar el balanceo de carga que presentan los routers.

Para la configuración que se ha dado a los routers y específicamente teniendo en cuenta la topología entre ellos, el balanceo de carga no se aplica porque no existen “camino” diferentes para comunicarse entre sí, pero a manera de prueba se puede verificar como se conecta cada dispositivo empleando el comando `ip eigrp topology`. Como se puede observar a continuación.

```
BOGOTA#ip eigrp topology
^
% Invalid input detected at '^' marker.
```

```
BOGOTA#show ip eigrp topology

### Ilustración 9: Evidencia ping de extremo a extremo

#### Parte 4: Configuración de las listas de Control de Acceso.

En este momento cualquier usuario de la red tiene acceso a todos sus dispositivos y estaciones de trabajo. El jefe de redes le solicita implementar seguridad en la red. Para esta labor se decide configurar listas de control de acceso (ACL) a los routers. Las condiciones para crear las ACL son las siguientes:

a. Cada router debe estar habilitado para establecer conexiones Telnet con los demás routers y tener acceso a cualquier dispositivo en la red.

La seguridad de los routers se configuró al inicio del documento mediante el comando `enable secret class y password cisco`

La configuración a telnet se realizó cuando se configuró la línea de consola 0 y vty 0 15 pero a solicitud de la guía de trabajo se consignan los comandos en cada router

##### ROUTER BOGOTÁ

```
SW-BOGOTA(config)#line console 0
SW-BOGOTA(config-line)#password cisco
SW-BOGOTA(config-line)#login
SW-BOGOTA(config-line)#logging synchronous
SW-BOGOTA(config-line)#line vty 0 15
SW-BOGOTA(config-line)#password cisco
SW-BOGOTA(config-line)#login
SW-BOGOTA(config-line)#logging synchronous
```

##### ROUTER MEDELLÍN

```
SW-MEDELLIN(config)#line console 0
SW-MEDELLIN(config-line)#password cisco
SW-MEDELLIN(config-line)#login

## COMPROBACION DE LA LISTA DE CONTROL DE ACCESO

Pinging 192.168.1.6 with 32 bytes of data:

```
Reply from 192.168.1.6: bytes=32 time=13ms TTL=126
Reply from 192.168.1.6: bytes=32 time=11ms TTL=126
Reply from 192.168.1.6: bytes=32 time=12ms TTL=126
```

Reply from 192.168.1.6: bytes=32 time=15ms TTL=126

Ping statistics for 192.168.1.6:

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),

Approximate round trip times in milli-seconds:

Minimum = 11ms, Maximum = 15ms, Average = 12ms

C:\>ping 192.168.1.5

Pinging 192.168.1.5 with 32 bytes of data:

Reply from 192.168.1.33: Destination host unreachable.

Ping statistics for 192.168.1.5:

Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),

Pinging 192.168.1.3 with 32 bytes of data:

Reply from 192.168.1.33: Destination host unreachable.

Ping statistics for 192.168.1.3:

Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),

Ahora se configura la ACL para que el servidor pueda acceder a todos los dispositivos de la red mediante el siguiente comando

ACL PARA EL SERVIDOR

BOGOTA>en

Password:

BOGOTA#conf t

BOGOTA#conf terminal

Enter configuration commands, one per line. End with CNTL/Z.

BOGOTA(config)#access-list 101 permit ip host 192.168.1.6 any

BOGOTA(config)#int g0/0

BOGOTA(config-if)#ip access-group 101 in

BOGOTA(config-if)#

## COMPROBACION DE ACCESO DEL SERVIDOR A LAS TERMINALES

```

### Escenario 2

Una empresa tiene la conexión a internet en una red Ethernet, lo cual deben adaptarlo para facilitar que sus routers y las redes que incluyen puedan, por esa vía, conectarse a internet, pero empleando las direcciones de la red LAN original.

Ilustración 14: Red del escenario 2

### Desarrollo del escenario 2

Los siguientes son los requerimientos necesarios:

### Implementación de la red

### Ilustración 15: implementación de la red escenario 2

1. Todos los routers deberán tener lo siguiente:

- Configuración básica.

#### ROUTER BUCARAMANGA

```

Router>en
Router#conf t
Router#conf terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#no ip domain-lookup
Router(config)#service password-encryption
Router(config)#banner motd &...ATENCIÓN SOLO ACCESO AUTORIZADO!!&
Router(config)#enable secret class
Router(config)#line console 0
Router(config-line)#password cisco
Router(config-line)#login
Router(config-line)#logging synchronous
Router(config-line)#line vty 0 15
Router(config-line)#password cisco
Router(config-line)#login
Router(config-line)#logging synchronous
Router(config-line)#hostname
^
% Invalid input detected at '^' marker.
Router(config-line)#
Router(config-line)#hostname BUCARAMANGA
    
```

```
BUCARAMANGA(config)#!  
BUCARAMANGA#
```

## CONFIGURACION DE INTERFACES ROUTER BUCARAMANGA

```
BUCARAMANGA(config)#int g0/0.1

```

- Cifrado de contraseñas.

El cifrado con contraseñas se efectuó en la configuración básica usando el comando `service password-encryption`, pero para efectos del desarrollo de la guía de trabajo se presentan a continuación.

## Router tunja

```
TUNJA(config)#ser
TUNJA(config)#service pass
TUNJA(config)#service password-encryption
```

## Router Bucaramanga

```
BUCARAMANGA(config)#service password-encryption
```

```
Router Cundinamarca
```

```
CUNDINAMARCA(config)#service password-encryption
```

- Un máximo de internos para acceder al router.

```
TUNJA(config-line)#login block-for 10 attempts 3 within 60
```

```
BUCARAMANGA(config-line)#login block-for 10 attempts 3 within 60
```

```
CUNDINAMARCA(config-line)#login block-for 10 attempts 3 within 60
```

- Máximo tiempo de acceso al detectar ataques.

```
TUNJA(config-line)#login block-for 10 attempts 3 within 60
```

```
BUCARAMANGA(config-line)#login block-for 10 attempts 3 within 60
```

```
CUNDINAMARCA(config-line)#login block-for 10 attempts 3 within 60
```

- Establezca un servidor TFTP y almacene todos los archivos necesarios de los routers.

El servicio TFTP del servidor debe estar en cendido “on” para que se almacenen los archivos

2. El DHCP deberá proporcionar solo direcciones a los hosts de Bucaramanga y Cundinamarca

DHCP configurado en Router Tunja

```
TUNJA(config)#ip dhcp excluded-add
```

```
TUNJA(config)#ip dhcp excluded-address 172.31.0.1 172.31.0.2

CUNDINAMARCA(config)#access-list 103 deny ip 172.31.1.64 0.0.0.63 172.31.2.8 0.0.0.63

CUNDINAMARCA(config)#access-list 103 deny ip 172.31.1.64 0.0.0.63 172.31.1.0 0.0.0.63

CUNDINAMARCA(config)#access-list 103 deny ip 172.31.1.64 0.0.0.63 172.31.2.24 0.0.0.7

CUNDINAMARCA(config)#int g0/0.20

CUNDINAMARCA(config-subif)#ip access-group 102 in

CUNDINAMARCA(config-subif)

Realizando la verificación de las lista se observa que en g0/0.20 ya permitia el acceso por la lista 101 y cuando se configura la g0/0.20 y se asigna el acceso al

grupo por la lista 103 no resulta funcional entonces se corrige la lista de acceso al grupo deajndo la g0/0.20 con acceso por la lista 101, emleando el siguiente comando.

```
CUNDINAMARCA#
CUNDINAMARCA#conf t
CUNDINAMARCA#conf terminal
Enter configuration commands, one per line. End with CNTL/Z.
CUNDINAMARCA(config)#int g0/0.20
CUNDINAMARCA(config-subif)#ip access-group 101 in
CUNDINAMARCA(config-subif)#end
CUNDINAMARCA#
%SYS-5-CONFIG_I: Configured from console by console
```

Y ahora eliminamos la lista 103 con el comando

```
CUNDINAMARCA#
CUNDINAMARCA#conf t
Enter configuration commands, one per line. End with CNTL/Z.
CUNDINAMARCA(config)#no access-list 103
CUNDINAMARCA(config)#int g0/0.20
CUNDINAMARCA(config-subif)#ip access-group 103 out
CUNDINAMARCA(config-subif)#end
CUNDINAMARCA#
```

Ahora reorganizando la lista de acceso se niega el acceso a cada vlan de la lista 103 teniendo en cuenta su origen y destino mediante el siguiente comando.

```
CUNDINAMARCA#conf t
CUNDINAMARCA#conf terminal
Enter configuration commands, one per line. End with CNTL/Z.
CUNDINAMARCA(config)#access-list 103 deny ip 172.31.2.8 0.0.0.7 172.31.1.64
0.0.0.63
CUNDINAMARCA(config)#access-list 103 deny ip 172.31.1.0 0.0.0.63 172.31.1.64
0.0.0.63
CUNDINAMARCA(config)#access-list 103 deny ip 172.31.2.24 0.0.0.7 172.31.1.64
0.0.0.63
CUNDINAMARCA(config)#g0/0.20
^
% Invalid input detected at '^' marker.
CUNDINAMARCA(config)#int g0/0.20
CUNDINAMARCA(config-subif)#ip access-group 103 out
CUNDINAMARCA(config-subif)#
CUNDINAMARCA(config-subif)#
```

```
CUNDINAMARCA(config-subif)#exit
CUNDINAMARCA(config)#access-list 103 permit ip any any
CUNDINAMARCA(config)#
```

Habilitar las opciones en puerto consola y terminal virtual

## CONCLUSIONES

Con la realización de la prueba de habilidades práctica CCNA se evidenció la importancia de la temática abordada durante el curso, un aspecto que se resalta es que aunque de forma muy básica se logró aprender a configurar dispositivos de una red usando el simulador packet tracer, el cual fue muy útil para el desarrollo de todas las tareas.

Como conclusión también me queda por afirmar que la temática vista fue muy extensa y el tiempo para su desarrollo fue muy limitado, sería bueno que esta clase de cursos “diplomados” tuvieran mayor tiempo para el desarrollo efectivo de los conceptos, ejercicios y tareas, pues de esta manera el aprendizaje sería más productivo y el curso cumpliría totalmente el objetivo para el cual fue diseñado... “formar ingenieros o técnicos con amplios conocimientos en redes”
