NOTA DE ACEPTACIÓN

Firma del presidente del Jurado

Firma del Jurado

Firma del Jurado

Bogotá, 03 de julio de 2019

DEDICATORIA

Se dedica los frutos de todo mi proceso de formación académica a la red de tutores de la UNAD- (universidad nacional abierta y a distancia) y a los compañeros de los diferentes cursos y principalmente a mis familiares, Que con el apoyo de todas las personas mencionadas anteriormente no sería posibles el logro que se culmina en mi vida profesional.

Para tener un presente y futuro mucho mejor a nivel monetario y en armonía en mi ambiente familiar y principalmente implementando los volares éticos y morales.

AGRADECIMIENTOS

Dedicamos el desarrollo tanto práctico como teórico de los módulos de CCNP SWITCH y CCNP ROUTE al director de curso GERARDO GRANADOS y a los compañeros de grupo de la plataforma UNAD que sin su ayuda no sería posible su implementación y simulación en los laboratorios de diplomado de profundización.

Y por otra parte gracias a los espacios sincrónicos de videoconferencia para el desarrollo de cada unidad.

GLOSARIO

DIRECCIONAMIENTO IP

en cada interfaz serial del router se va a implementar una dirección con su máscara para la posible comunicación de las demás sucursales y él envió de información sin perdida dato un previo ping al destino.

PROTOCOLOS DE ENRUTAMIENTO:

son herramientas u protocolos que se configura por medio de la consola de un router para el envío de paquetes sin tráfico ni saturación

VLAN:

(red de área local virtual), es un método para crear redes lógicas independientes dentro de una misma red física.

RESUMEN

A lo largo de este curso se ha adquirido conocimientos de diferentes tipos de enrutamiento en cada uno de los laboratorios de las unidades del curso de profundización diplomado CCNP y analizando críticamente los comandos implementados en la consola de software de redes manejado.

Sus Vlan's nos permiten tener redes dentro de dispositivos para evitar el tráfico de la información manejando una frecuencia optima a la hora de una autenticacion u versión de los equipos

Palabras claves: cisco, ccnp Switch y ccnp route, redes, telecomunicaciones, protocolos de enrutamiento, topologia, GNS3, Packet Tracer.

ABSTRACT

Throughout this course we have acquired knowledge of different types of routing in each of the laboratories of the CCNP diplomatic deepening course units and critically analyzing the commands implemented in the managed network software console.

Their changes allow us to have networks within the devices to avoid the traffic of the information managing an optimal frequency when it comes to an authentication or version of the equipment.

Keywords: cisco, ccnp Switch and ccnp route, networks, telecommunications, routing protocols, topology, GNS3, Packet Tracer.

INTRODUCCIÓN

En el presente documento se realiza con el fin de implementar los conocimientos adquiridos a lo largo del curso CCNP en una prueba de habilidades utilizando un software de simulación de redes para su desarrollo práctico.

También se estructura e implementa protocolos de enrutamiento en las diferentes clases de direcciones ip para una comunicación eficiente y oportuna, sus diferentes dispositivos de red en un simulador instalado sus IOS de Switch y router en el software GNS3 trabajando IPV6 ya que es un protocolo de internet definido por la RFC 2460 en un conjunto Ipsec de protocolos cuya función es asegurar la comunicación en protocolos de internet por medio de la autenticación o el cifrado de paquetes, las Vlan se implementan para crear un métodos de redes lógicas independiente dentro de una misma red física u su topología.

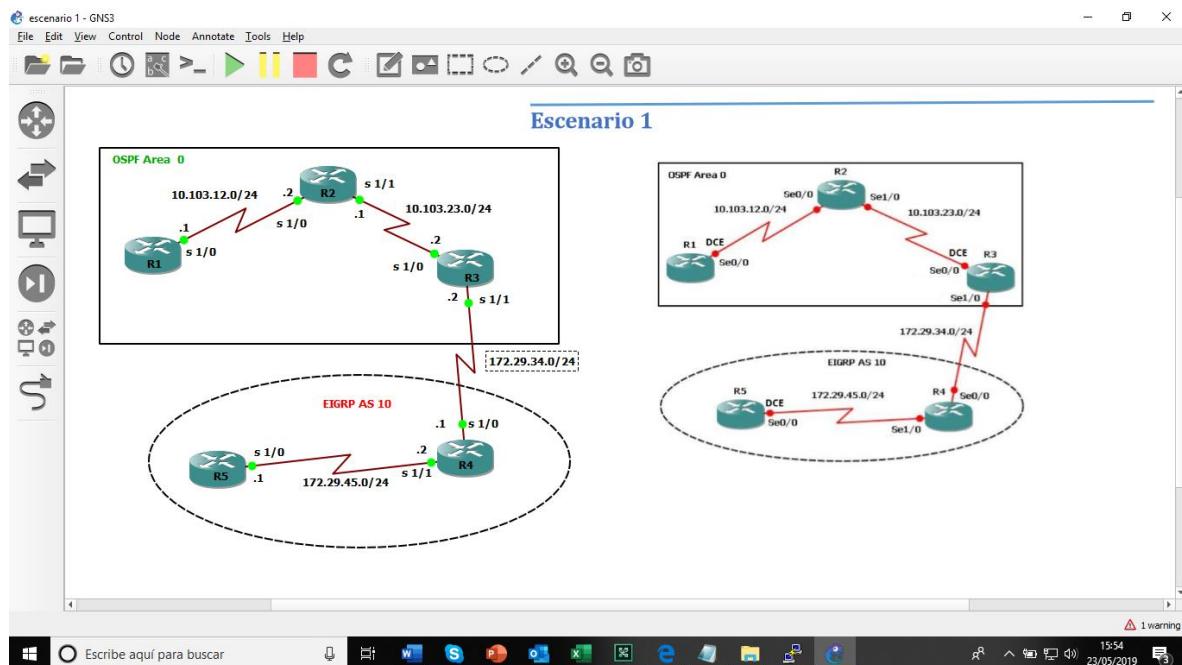

DESARROLLO DE LA PRUEBA DE HABILIDADES PRÁCTICAS

IMPORTANTE: Para cada uno de los escenarios se debe describir el paso a paso de cada punto realizado y deben digitar el código de configuración aplicado (no incluir imágenes ni capturas de pantalla). Las imágenes o capturas de pantalla sólo serán usadas para evidenciar los resultados de comandos como ping, traceroute, show ip route, entre otros.

- ✓ Descripción de escenarios propuestos para la prueba de habilidades

Escenario 1

Figura 1 Topología Escenario 1

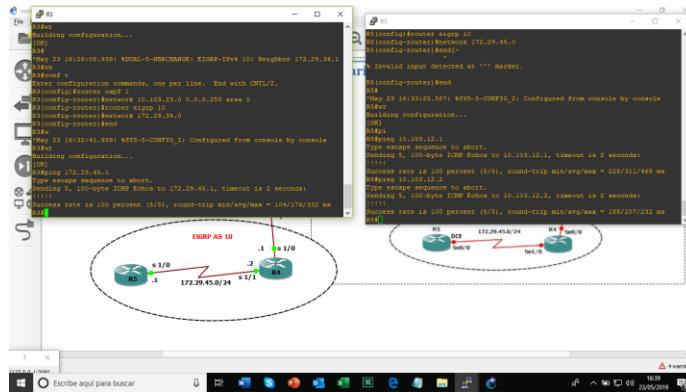

- ✓ Aplique las configuraciones iniciales y los protocolos de enrutamiento para los routers R1, R2, R3, R4 y R5 según el diagrama. No asigne password en los routers. Configurar las interfaces con las direcciones que se muestran en la topología de red.

Tabla 1 Enrutamiento

R1	R2	R3	R4	R5
<pre>int s1/0 ip address 10.103.12.1 255.255.255.0 no shut router ospf 1 network 10.103.12.0 0.0.0.255 area 0</pre>	<pre>int s1/0 ip address 10.103.12.2 255.255.255.0 no shut exit int s1/1 ip address 10.103.23.1 255.255.255.0 no shut router ospf 1 network 10.103.12.0 0.0.0.255 area 0 network 10.103.23.0 0.0.0.255 area 0</pre>	<pre>int s1/0 ip address 10.103.23.2 255.255.255.0 no shut exit int s1/1 ip address 172.29.34.2 255.255.255.0 no shut router ospf 1 network 10.103.23.0 0.0.0.255 area 0 router eigrp 10 network 172.29.34.0</pre>	<pre>int s1/0 ip address 172.29.34.1 255.255.255.0 no shut exit int s1/1 ip address 172.29.45.2 255.255.255.0 no shut router eigrp 10 network 172.29.45.0</pre>	<pre>int s1/0 ip address 172.29.45.1 255.255.255.0 no shut</pre>

En la siguiente ilustración se implementan los anteriores comandos en la consola de los routers

Figura 2 Protocolo de Enrutamiento

Cree cuatro nuevas interfaces de Loopback en R1 utilizando la asignación de direcciones 10.1.0.0/22 y configure esas interfaces para participar en el área 0 de OSPF

Tabla 2 interfaces de Loopback

R1
int <u>lo</u> 4 ip address 10.2.2.1 255.255.252.0 exit
int <u>lo</u> 5 ip address 10.2.3.1 255.255.252.0 exit
int <u>lo</u> 6 ip address 10.2.4.1 255.255.252.0 exit
int <u>lo</u> 7 ip address 10.2.5.1 255.255.252.0 exit

Tabla 3 área 0 de OSPF

router ospf 1
network 10.2.2.0 0.0.3.255 area 0
network 10.2.3.0 0.0.3.255 area 0
network 10.2.4.0 0.0.3.255 area 0
network 10.2.5.0 0.0.3.255 area 0

Cree cuatro nuevas interfaces de Loopback en R5 utilizando la asignación de direcciones 172.5.0.0/22 y configure esas interfaces para participar en el Sistema Autónomo EIGRP 10.

Tabla 4 interfaces de Loopback en R5

<pre>int lo 10 ip address 172.5.2.1 255.255.252.0 exit</pre>
<pre>int lo 11 ip address 172.5.3.1 255.255.252.0 exit</pre>
<pre>int lo 12 ip address 172.5.4.1 255.255.252.0 exit</pre>
<pre>int lo 13 ip address 172.5.5.1 255.255.252.0 exit</pre>

Tabla 5 Sistema Autónomo EIGRP 10

<pre>router eigrp 10</pre>
<pre>network 172.5.2.0</pre>
<pre>network 172.5.3.0</pre>
<pre>network 172.5.4.0</pre>
<pre>network 172.5.5.0</pre>

Analice la tabla de enrutamiento de R3 y verifique que R3 está aprendiendo las nuevas interfaces de Loopback mediante el comando show ip route.

CONCLUSIONES

En el siguiente documento se implementan y analizan los conocimientos adquiridos durante el curso con ayuda de tutor y compañeros y aplicarlos a la prueba de habilidades de cisco CCNP de la plataforma de cisco.

Durante los escenarios estudiados en el presente informe implementamos VLAN y diferentes tipos de enrutamiento con su relación BGP entre vecino en la misma topología de red.

La configuración de protocolo EBGP implementa Loopback para compartir en un sistema autónomo (AS), entre ruteo entre dominio de redes TCP/IP que re establece conexión por medio del puerto TCP 179.

OSPF protocolo de red para encaminamiento jerárquico para buscar la ruta más corta entre nodos con una métrica de ancho de banda específica.
