Nota de Aceptación

Presidente del Jurado

Jurado

Jurado

Pitalito Huila 29 de junio de 2019

Doy gracias a Dios por permitir culminar este trabajo y el diplomado.

Dedico este trabajo a mi hermano Yoiner Rocha Salazar, padres Jaime Rocha Hoyos y Yenny Salazar Sánchez, a Marcela Botina Diaz y mi hijo Juan David Rocha Botina, por su apoyo incondicional en todo este trayecto para alcanzar la meta.

AGRADECIMIENTOS

Agradezco a todo el grupo de tutores de la escuela de ingeniería de la sede Pitalito, por el acompañamiento prestado durante todo el trascurso de los semestres.

1 INTRODUCCIÓN

En la actualidad las redes de datos son parte fundamental de todas las tecnologías que cada día crece más con el fin de suplir y mejorar las necesidades de las personas, permitiendo como objetivo principal la comunicación en diferentes medios, como archivos, voz, audio, video entre muchos más.

Durante todo el trascurso del diplomado de cisco, se abordaron 4 unidades en las cuales se adquirieron los conocimientos necesarios de configuración, e implementación de redes de datos, tanto para pequeñas empresas como para grandes con varias sedes.

En el presente trabajo se abordarán algunos de los aspectos aprendidos durante todo el diplomado, con el fin de aplicar protocolos y demás configuraciones para dos escenarios que consisten en conectar y configurar dos o más redes en diferentes ciudades o sedes.

2 PLANTEAMIENTO DEL PROBLEMA

DEFINICIÓN DEL PROBLEMA

3 Escenario 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá y Medellín, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Topología de red

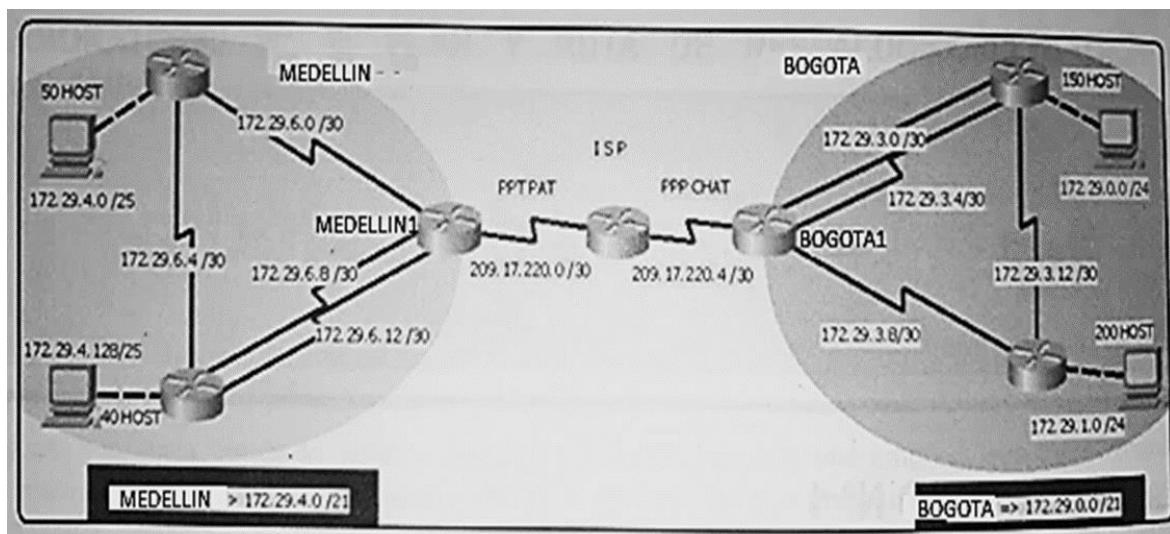

Ilustración 1: Topología de red 1

Este escenario plantea el uso de RIP como protocolo de enrutamiento, considerando que se tendrán rutas por defecto redistribuidas; asimismo, habilitar el encapsulamiento PPP y su autenticación.

Los routers Bogota2 y medellin2 proporcionan el servicio DHCP a su propia red LAN y a los routers 3 de cada ciudad.

Debe configurar PPP en los enlaces hacia el ISP, con autenticación.

Debe habilitar NAT de sobrecarga en los routers Bogota1 y medellin1.

DESARROLLO DEL PROYECTO

Como trabajo inicial se debe realizar lo siguiente.

- Realizar las rutinas de diagnóstico y dejar los equipos listos para su configuración (asignar nombres de equipos, asignar claves de seguridad, etc).
- Se realizan las configuraciones básicas de seguridad en cada uno de los dispositivos, agregándoles una contraseña y un nombre para identificarlos.

Configuración Router MEDELLIN2

```
MEDELLIN2(config)#hostname MEDELLIN2
MEDELLIN2(config)#no ip domain-lookup
MEDELLIN2(config)#service password-encryption
MEDELLIN2(config)#enable secret class
MEDELLIN2(config)#line console 0
MEDELLIN2(config-line)#password cisco
MEDELLIN2(config-line)#login
MEDELLIN2(config-line)#LINE VTY 0 15
MEDELLIN2(config-line)#password cisco
MEDELLIN2(config-line)#login
```

Configuración Router MEDELLIN3

```
MEDELLIN3(config)#hostname MEDELLIN3
MEDELLIN3(config)#no ip domain-lookup
MEDELLIN3(config)#service password-encryption
MEDELLIN3(config)#enable secret class
MEDELLIN3(config)#line console 0
MEDELLIN3(config-line)#password cisco
```

```
MEDELLIN3(config-line)#login  
MEDELLIN3(config-line)#LINE VTY 0 15  
MEDELLIN3(config-line)#password cisco  
MEDELLIN3(config-line)#login
```

Configuración Router ISP

```
ISP(config)#no ip domain-lookup  
ISP(config)#service password-encryption  
ISP(config)#enable secret class  
ISP(config)#line console 0  
ISP(config-line)#password cisco  
ISP(config-line)#login  
ISP(config-line)#LINE VTY 0 15  
ISP(config-line)#password cisco  
ISP(config-line)#login
```

Configuración Router MEDELLIN1

```
MEDELLIN>ENABLE  
MEDELLIN#CONF T  
Enter configuration commands, one per line. End with CNTL/Z.  
MEDELLIN(config)#hostname MEDELLIN1  
MEDELLIN1(config)#no ip domain-lookup  
MEDELLIN1(config)#service password-encryption  
MEDELLIN1(config)#enable secret class  
MEDELLIN1(config)#line console 0  
MEDELLIN1(config-line)#password cisco  
MEDELLIN1(config-line)#login  
MEDELLIN1(config-line)#LINE VTY 0 15  
MEDELLIN1(config-line)#password cisco
```

MEDELLIN1(config-line)#login

Configuración Router BOGOTÁ

BOGOTA>ENABLE

BOGOTA#conf t

Enter configuration commands, one per line. End with CNTL/Z.

BOGOTA(config)#no ip domain-lookup

BOGOTA(config)#service password-encryption

BOGOTA(config)#enable secret class

BOGOTA(config)#line console 0

BOGOTA(config-line)#password cisco

BOGOTA(config-line)#login

BOGOTA(config-line)#LINE VTY 0 15

BOGOTA(config-line)#password cisco

BOGOTA(config-line)#login

Configuración Router BOGOTÁ 2

Router>enable

Router#conf t

Enter configuration commands, one per line. End with CNTL/Z.

Router(config)#hostname BOGOTA2

BOGOTA2(config)#no ip domain-lookup

BOGOTA2(config)#service password-encryption

BOGOTA2(config)#enable secret class

BOGOTA2(config)#line console 0

BOGOTA2(config-line)#password cisco

BOGOTA2(config-line)#login

BOGOTA2(config-line)#LINE VTY 0 15

BOGOTA2(config-line)#password cisco

```
BOGOTA2(config-line)#login
```

Configuración Router BOGOTÁ 3

```
Router>enable  
Router#conf t  
Enter configuration commands, one per line. End with CNTL/Z.  
Router(config)#hostname BOGOTA3  
BOGOTA3(config)#no ip domain-lookup  
BOGOTA3(config)#service password-encryption  
BOGOTA3(config)#enable secret class  
BOGOTA3(config)#line console 0  
BOGOTA3(config-line)#password cisco  
BOGOTA3(config-line)#login  
BOGOTA3(config-line)#LINE VTY 0 15  
BOGOTA3(config-line)#password cisco  
BOGOTA3(config-line)#login
```

Realizar la conexión física de los equipos con base en la topología de red

Configurar la topología de red, de acuerdo con las siguientes especificaciones.

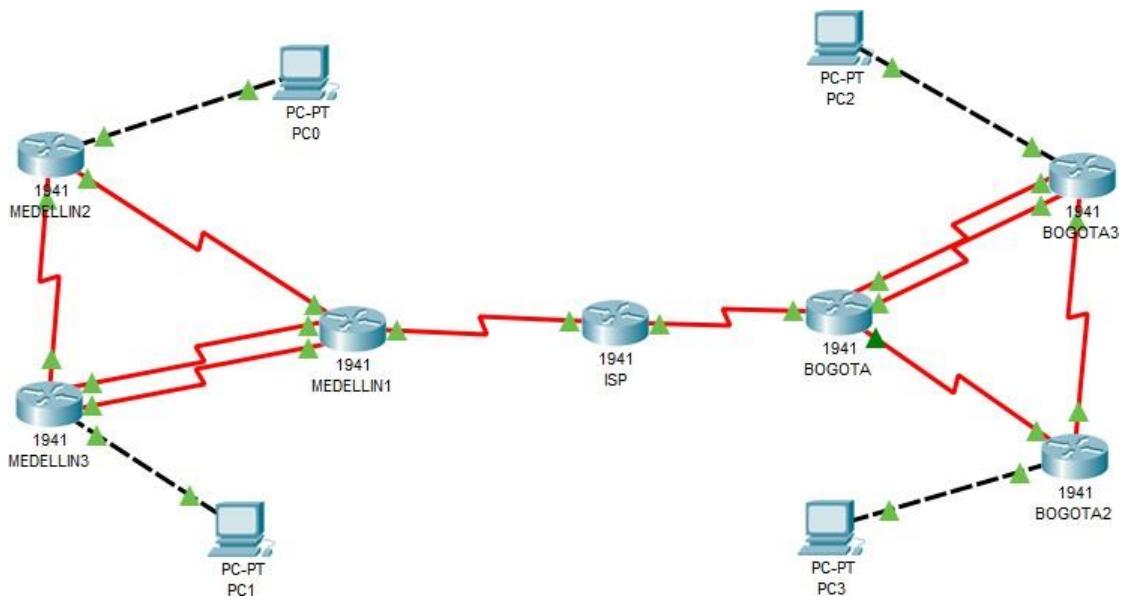

Ilustración 2: Topología

Parte 1: Configuración del enrutamiento

- a. Configurar el enrutamiento en la red usando el protocolo RIP versión 2, declare la red principal, desactive la sumarización automática.

Se realiza la configuración de enrutamiento para cada uno de los dispositivos, según la topología establecida.

Configuración Router ISP

```

Router>ENABLE
Router#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#int s0/0/0
Router(config-if)#ip address 209.17.220.1 255.255.255.252

- b. Los routers Bogota1 y Medellín deberán añadir a su configuración de enrutamiento una ruta por defecto hacia el ISP y, a su vez, redistribuirla dentro de las publicaciones de RIP.

Se configura el enrutamiento hacia el ISP, dejando una ruta por defecto, adicional a eso con el comando **default-information originate** se distribuye dentro las publicaciones de RIP.

Configuración ROUTER MEDELLIN1

```
Router>enable
Router#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.1
Router(config)#router rip
Router(config-router)#default-information originate
Router(config-router)#

```

Configuración ROUTER BOGOTA1

```
Router>enable
Router#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#ip route 0.0.0.0 0.0.0.0 209.17.220.5
Router(config)#route rip

```

```
Router(config-router)#default-information origina  
Router(config-router)#+
```

- c. El router ISP deberá tener una ruta estática dirigida hacia cada red interna de Bogotá y Medellín para el caso se sumarizan las subredes de cada uno a /22.

```
Router>enable  
Router#conf t  
Enter configuration commands, one per line. End with CNTL/Z.  
Router(config)#ip route 172.29.4.0 255.255.252.0 209.17.220.2  
Router(config)#ip route 172.29.0.0 255.255.252.0 209.17.220.6  
Router(config)#+
```

Parte 2: Tabla de Enrutamiento.

- a. Verificar la tabla de enrutamiento en cada uno de los routers para comprobar las redes y sus rutas.

Mediante el comando **Show Ip route** se verifica las tablas de enramiento para cada uno de los dispositivos.

Ilustración 6: Balanceo de Carga MEDELLIN3

- c. Obsérvese en los routers Bogotá1 y Medellín1 cierta similitud por su ubicación, por tener dos enlaces de conexión hacia otro router y por la ruta por defecto que manejan.
- d. Los routers Medellín2 y Bogotá2 también presentan redes conectadas directamente y recibidas mediante RIP.
- e. Las tablas de los routers restantes deben permitir visualizar rutas redundantes para el caso de la ruta por defecto.
- f. El router ISP solo debe indicar sus rutas estáticas adicionales a las directamente conectadas.

El Router ISP, solo muestra sus dos rutas conectadas directamente, mediante el comando show ip route

The screenshot shows the Cisco IOS CLI interface titled "ISP". The tabs at the top are "Physical", "Config", "CLI" (which is selected), and "Attributes". Below the tabs, it says "IOS Command Line Interface".

Parte 3: Deshabilitar la propagación del protocolo RIP.

- a. Para no propagar las publicaciones por interfaces que no lo requieran se debe deshabilitar la propagación del protocolo RIP, en la siguiente tabla se indican las interfaces de cada router que no necesitan desactivación.

ROUTER	INTERFAZ
Bogota1	SERIAL0/0/1; SERIAL0/1/0; SERIAL0/1/1
Bogota2	SERIAL0/0/0; SERIAL0/0/1
Bogota3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
Medellín1	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/1

Medellín2	SERIAL0/0/0; SERIAL0/0/1
Medellín3	SERIAL0/0/0; SERIAL0/0/1; SERIAL0/1/0
ISP	No lo requiere

Esta configuración se realizó cuando se configuro RIP

Parte 4: Verificación del protocolo RIP.

- a Verificar y documentar las opciones de enrutamiento configuradas en los routers, como el passive interface para la conexión hacia el ISP, la versión de RIP y las interfaces que participan de la publicación entre otros datos.

Se realiza verificación mediante el comando **show ip protocols**

Router MEDELLIN1

```

Router# show ip protocols
Routing Protocol is "rip"
  Sending updates every 30 seconds, next due in 20 seconds
  Invalid after 180 seconds, hold down 180, flushed after 240
  Outgoing update filter list for all interfaces is not set
  Incoming update filter list for all interfaces is not set
  Redistributing: rip
  Default version control: send version 2, receive 2

Parte 6: Configuración de PAT.

- a. En la topología, si se activa NAT en cada equipo de salida (Bogotá1 y Medellín1), los routers internos de una ciudad no podrán llegar hasta los routers internos en el otro extremo, sólo existirá comunicación hasta los routers Bogotá1, ISP y Medellín1.
- b. Después de verificar lo indicado en el paso anterior proceda a configurar el NAT en el router Medellín1. Compruebe que la traducción de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la dirección debe ser traducida automáticamente a la dirección de la interfaz serial 0/1/0 del router Medellín1, como diferente puerto.

- c. Proceda a configurar el NAT en el router Bogotá1. Compruebe que la traducción de direcciones indique las interfaces de entrada y de salida. Al realizar una prueba de ping, la dirección debe ser traducida automáticamente a la dirección de la interfaz serial 0/1/0 del router Bogotá1, como diferente puerto.

The screenshot shows a Windows desktop environment with a terminal window titled "PC2". The window has tabs at the top: Physical, Config, Desktop (which is selected), Programming, and Attributes. The main area of the window displays command-line output for pinging various IP addresses. The output includes the command entered (e.g., "ping 172.29.1.6"), the number of bytes sent, the time taken for each reply, and the TTL value. It also provides statistics for the ping, such as the number of packets sent and received, and the minimum, maximum, and average round-trip times.

```
Pinging 172.29.1.6 with 32 bytes of data:
Reply from 172.29.1.6: bytes=32 time=4ms TTL=126
Reply from 172.29.1.6: bytes=32 time=2ms TTL=126
Reply from 172.29.1.6: bytes=32 time=1ms TTL=126
Reply from 172.29.1.6: bytes=32 time=2ms TTL=126

Ping statistics for 172.29.1.6:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 1ms, Maximum = 4ms, Average = 2ms

C:\>ping 172.29.4.6

Pinging 172.29.4.6 with 32 bytes of data:
Reply from 172.29.4.6: bytes=32 time=7ms TTL=123
Reply from 172.29.4.6: bytes=32 time=4ms TTL=123
Reply from 172.29.4.6: bytes=32 time=5ms TTL=123
Reply from 172.29.4.6: bytes=32 time=4ms TTL=123

Ping statistics for 172.29.4.6:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 4ms, Maximum = 7ms, Average = 5ms

C:\>ping 172.29.4.134

Pinging 172.29.4.134 with 32 bytes of data:
Request timed out.
Reply from 172.29.4.134: bytes=32 time=4ms TTL=123
Reply from 172.29.4.134: bytes=32 time=4ms TTL=123
Reply from 172.29.4.134: bytes=32 time=4ms TTL=123

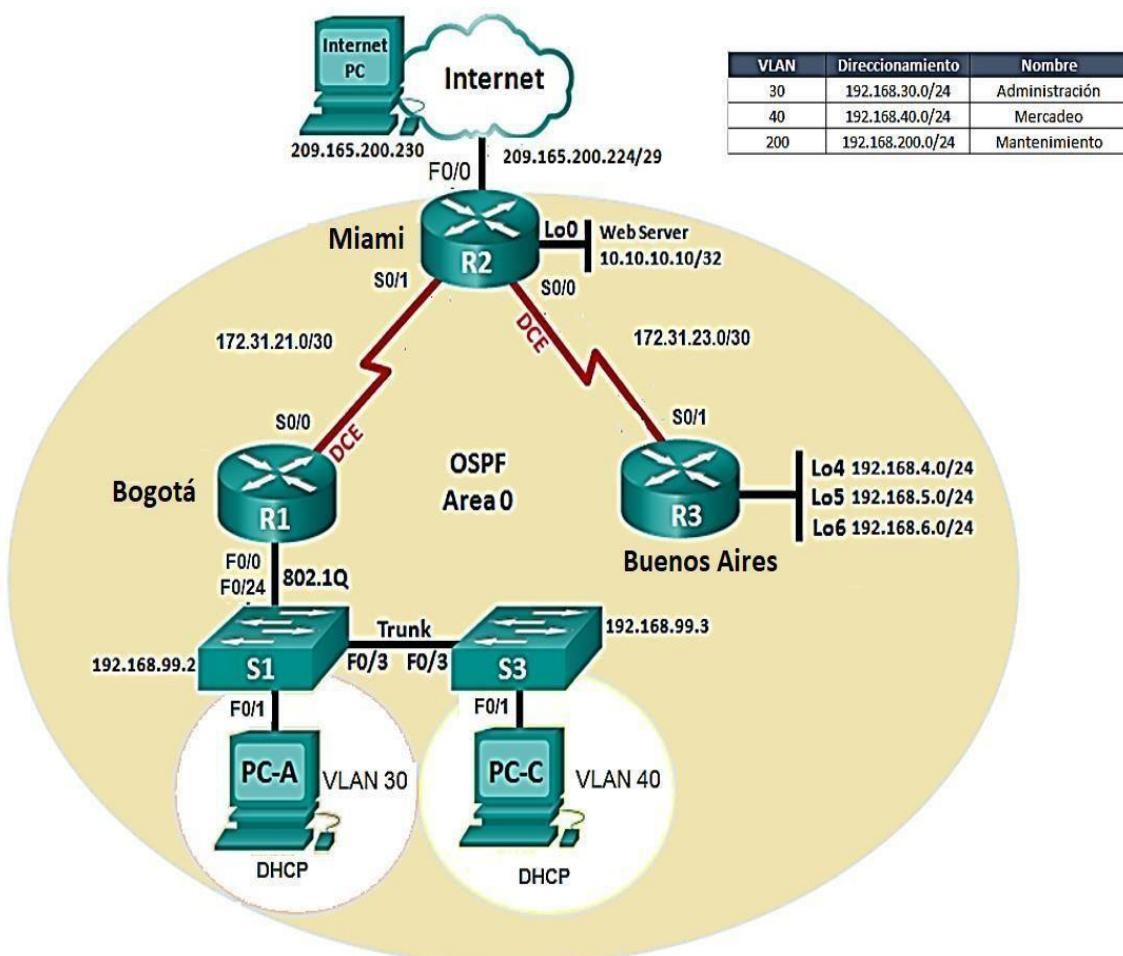

Ping statistics for 172.29.4.134:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 4ms, Maximum = 4ms, Average = 4ms

4 ESCENARIO 2

Escenario: Una empresa de Tecnología posee tres sucursales distribuidas en las ciudades de Miami, Bogotá y Buenos Aires, en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

1. Configurar el direccionamiento ip acorde con la topología de red para cada uno de los dispositivos que forman parte del escenario

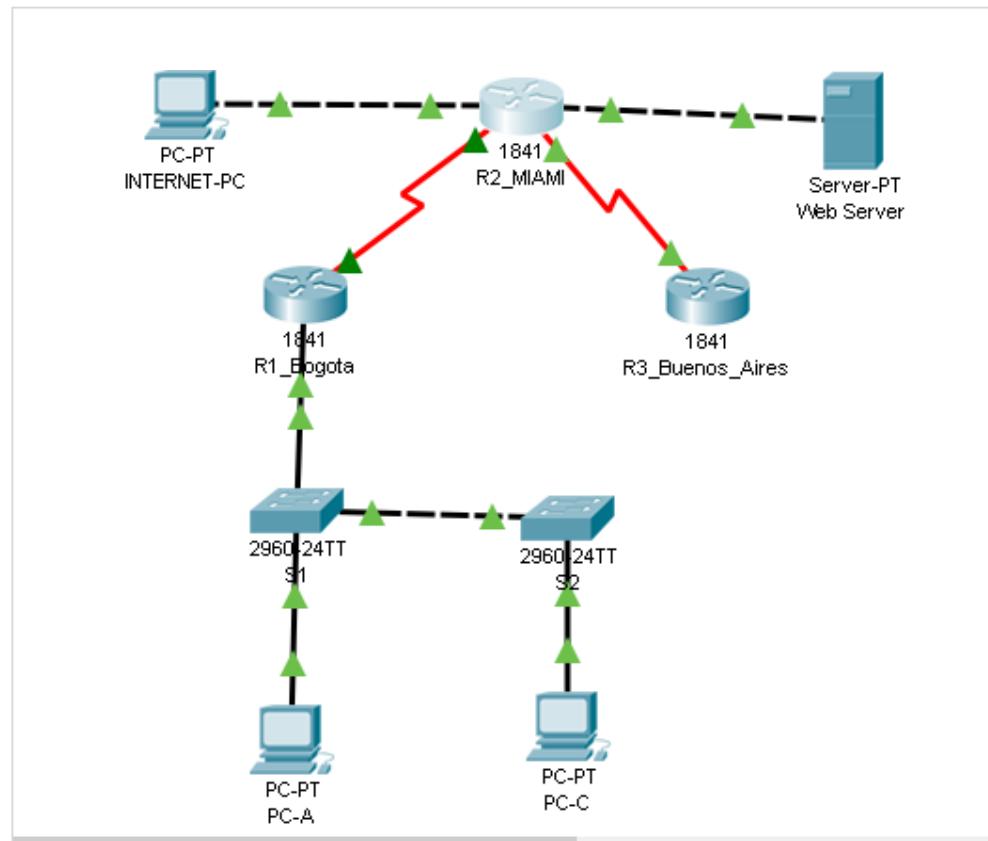

Ilustración 15: Topología

Se realiza la respectiva configuración de enrutamiento para cada uno de los dispositivos, según la topología

6. Desactivar todas las interfaces que no sean utilizadas en el esquema de red.

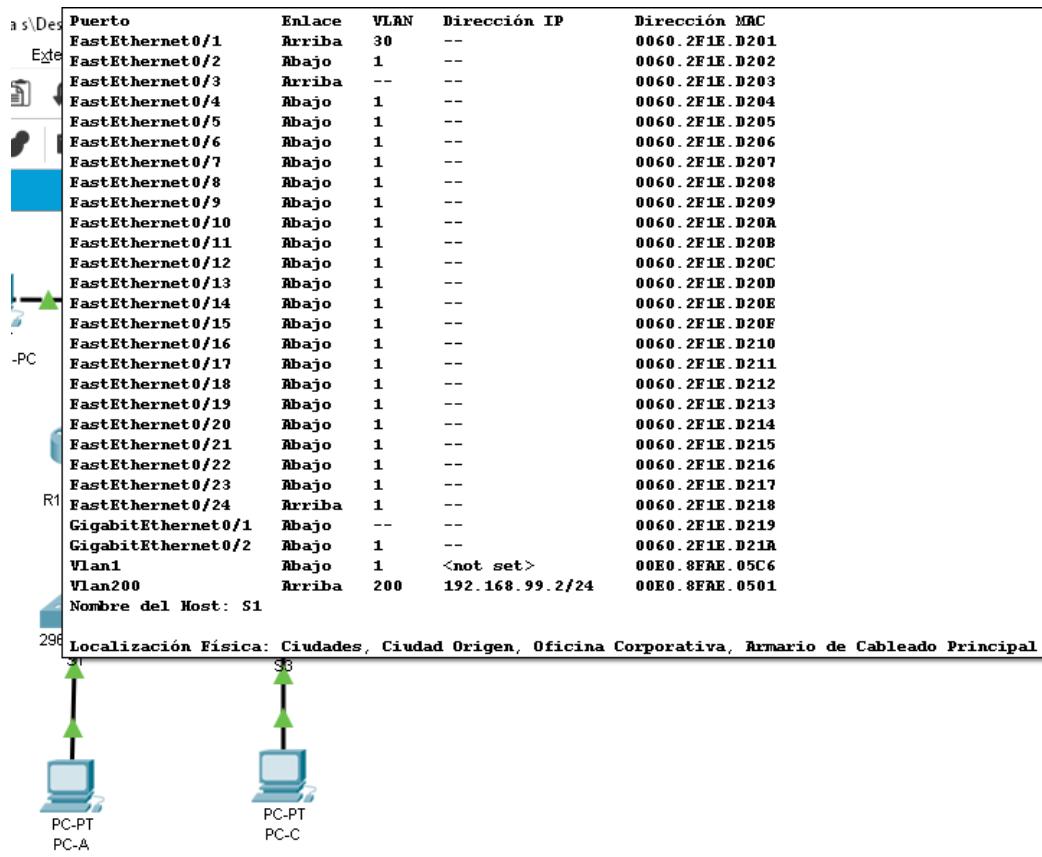

Ilustración 26: Desactivar interfaz pasivas

7. Implement DHCP and NAT for IPv4
8. Configurar R1 como servidor DHCP para las VLANs 30 y 40.
9. Reservar las primeras 30 direcciones IP de las VLAN 30 y 40 para configuraciones estáticas.

Configurar DHCP pool para VLAN 30	Name: ADMINISTRACION DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.
-----------------------------------	--

Configurar DHCP pool para VLAN 40	Name: MERCADO DNS-Server: 10.10.10.11 Domain-Name: ccna-unad.com Establecer default gateway.
-----------------------------------	---

R1

```
R1_Bogota>enable
R1_Bogota#conf t
Enter configuration commands, one per line. End with CNTL/Z.
R1_Bogota(config)#ip dhcp excluded-address 192.168.30.1 192.168.30.30
R1_Bogota(config)#ip dhcp excluded-address 192.168.40.1 192.168.40.30
R1_Bogota(config)#ip dhcp pool Administracion
R1_Bogota(dhcp-config)#dns-server 10.10.10.11
R1_Bogota(dhcp-config)#domain-name ccna-unad.edu.co
R1_Bogota(dhcp-config)#default-router 192.168.30.1
R1_Bogota(dhcp-config)#network 192.168.30.0 255.255.255.0
R1_Bogota(dhcp-config)#dns-server 10.10.10.11
R1_Bogota(dhcp-config)#default-router 192.168.40.1
R1_Bogota(dhcp-config)#network 192.168.40.0 255.255.255.0
R1_Bogota(dhcp-config)#end
```

10. Configurar NAT en R2 para permitir que los hosts puedan salir a internet

```
R2_MIAMI>enable
R2_MIAMI#conf t
Enter configuration commands, one per line. End with CNTL/Z.
R2_MIAMI(config)#ip nat inside source static 10.10.10.10 209.165.200.209
R2_MIAMI(config)#exit
```

11. Configurar al menos dos listas de acceso de tipo estándar a su criterio en para restringir o permitir tráfico desde R1 o R3 hacia R2.

```
R2_MIAMI#conf t
```

```
Enter configuration commands, one per line. End with CNTL/Z.
```

```
R2_MIAMI(config)#access-list 1 permit 192.168.30.0 0.0.0.255
```

```
R2_MIAMI(config)#access-list 1 permit 192.168.40.0 0.0.0.255
```

```
R2_MIAMI(config)#access-list 1 permit 192.168.4.0 0.0.3.255
```

```
R2_MIAMI(config)#end
```

12. Configurar al menos dos listas de acceso de tipo extendido o nombradas a su criterio en para restringir o permitir tráfico desde R1 o R3 hacia R2.

```
R2_MIAMI#conf t
```

```
Enter configuration commands, one per line. End with CNTL/Z.
```

```
R2_MIAMI(config)#access-li
```

```
% Incomplete command.
```

```
R2_MIAMI(config)#access-list 101 permit tcp any host 209.165.200.229 eq www
```

```
R2_MIAMI(config)#int f0/0
```

```
R2_MIAMI(config-if)#ip access-group 101 in
```

```
R2_MIAMI(config-if)#int s0/0/0
```

```
R2_MIAMI(config-if)##ip access-group 101 ou
```

```
R2_MIAMI(config-if)#ip access-group 101 ou
```

```
R2_MIAMI(config-if)#int s0/0/1
```

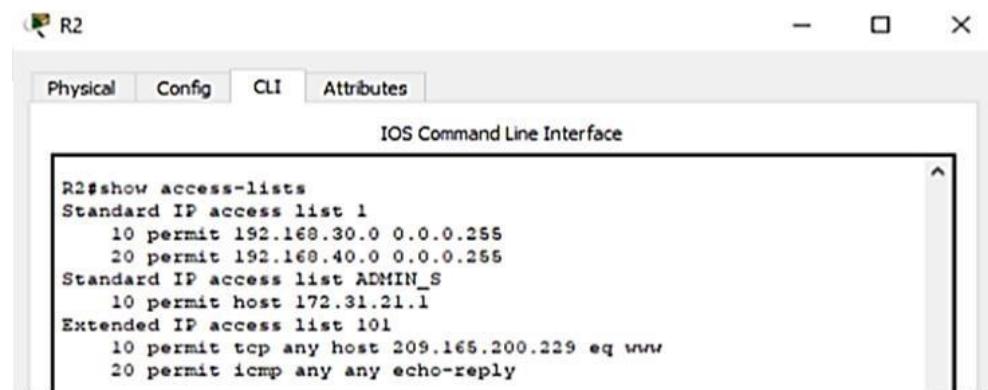

```
R2_MIAMI(config-if)#ip access-group 101 out
```

```
R2_MIAMI(config-if)#end
```

```
R2_MIAMI#
```

```
%SYS-5-CONFIG_I: Configured from console by console
```

13. Verificar procesos de comunicación y re direccionamiento de tráfico en los routers mediante el uso de Ping y Traceroute.

R2#show access-lists

Standard IP access list 1

 10 permit 192.168.30.0 0.0.0.255

 20 permit 192.168.40.0 0.0.0.255

Standard IP access list ADMIN_S

 10 permit host 172.31.21.1

Extended IP access list 101

 10 permit tcp any host 209.165.200.229 eq www

 20 permit icmp any any echo-reply

Ilustración 27: Verificación

R1#ping 209.165.200.230

Type escape sequence to abort.

Sending 5, 100-byte ICMP Echos to 209.165.200.230, timeout is 2 seconds:

!!!!

Success rate is 80 percent (4/5), round-trip min/avg/max = 1/6/23 ms

Ilustración 28: Ping de R1 a 209.165.200.230

5 CONCLUSIONES

- Con el anterior trabajo se pudo dar solución a la problemática de los escenarios propuestos, pudiendo así poner en práctica el conocimiento adquirido a lo largo del diplomado como el protocolo DHCP, que nos permite asignar direcciones IP, muy útil para redes grandes.
- Para el escenario 1 se realizó configuración de enrutamiento para cada uno de los dispositivos mediante el protocolo RIP, aplicando los conocimientos adquiridos respecto a configuraciones PPP.
- Para el escenario 2, mediante configuración de direccionamiento ip, se configuro cada uno de los dispositivos de la topología, mediante protocolo OSPF V2 y los diferentes servicios como DHCP, PP, NAT y redes VLAN, después de la respectiva configuración se verifican mediante los respectivos comandos de conectividad y traceroute, evidenciando así la funcionalidad de las topologías configuradas
