DEDICATORIA

En primera instancia a Dios que siempre ha estado conmigo para no dejarme desfallecer con la gran ayuda de mi madre y familiares, son el motor que impulsan mis ganas de salir adelante, pero no más que el de ver a mi hija orgullosa de su padre, a mi familia Unadista con sus directivos y excelentes docentes que siempre me brindaron lo necesario y más en todo este proceso con el fin de lograr esta meta, de ser uno de los ingenieros egresados de la UNAD.

RESUMEN

El diplomado CISCO en redes LANWAN se abordan temas de alta calidad que realmente son muy importantes y necesarios para nuestra carrera como ingenieros como la construcción de redes LANWAN, se estudia, se hace, se plasma y realizan diseños en dos escenarios con parámetros para una red que tiene una empresa con tres sedes en el país, una segunda empresa tiene conexión a internet y se adapta con la red LAN, gracias a lo aprendido este conocimiento nos permite desarrollar cualquier situación y obtener la solución.

PALABRAS CLAVES: Escenario, LAN, Redes, Routing, WAN.

ABSTRACT

The CISCO diploma in LANWAN networks addresses high quality topics that are really very important and necessary for our career as engineers such as the construction of LANWAN networks, it is studied, made, reflected and designs are made in two scenarios with parameters for a network that has a company with three offices in the country, a second company has an internet connection and adapts to the LAN network, thanks to what we have learned, this knowledge allows us to develop and situation and obtain the solution.

KEY WORDS: Scenari, LAN, Networks, Routing, WAN

INTRODUCCIÓN

Continuando con el Desarrollo del curso de CCNA de CISCO modulo I y II, Como parte del trabajo, se presenta el siguiente informe como producto de las prácticas realizadas con Packet Tracer propuestas para esta fase.

Este informe corresponde a la parte CCNA Principios básicos de Routing, Switching, OSPF, DHCP, entre otras actividades; En cada uno de los escenarios se mostrarán las destrezas y habilidades adquiridas en la que se realiza la configuración en Packet Tracert.

OBJETIVOS

Objetivos Generales:

- Mediante dos escenarios dar solución concisa y sistemática por medio de los conocimientos adquiridos en el diplomado CISCO de CCNA.

Objetivos Específicos:

- Hacer una descripción de actividades de los escenarios
- Analizar y configurar las topologías de la red
- Practicar comandos de configuración, Verificación, Enrutamiento, Conectividad, DHCP, NAT en routers Cisco.

ESCENARIO 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá, Medellín y Cali en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Topología de red

ESCENARIO 2

Una empresa tiene la conexión a internet en una red Ethernet, lo cual deben adaptarlo para facilitar que sus Routers y las redes que incluyen puedan, por esa vía, conectarse a internet, pero empleando las direcciones de la red LAN original.

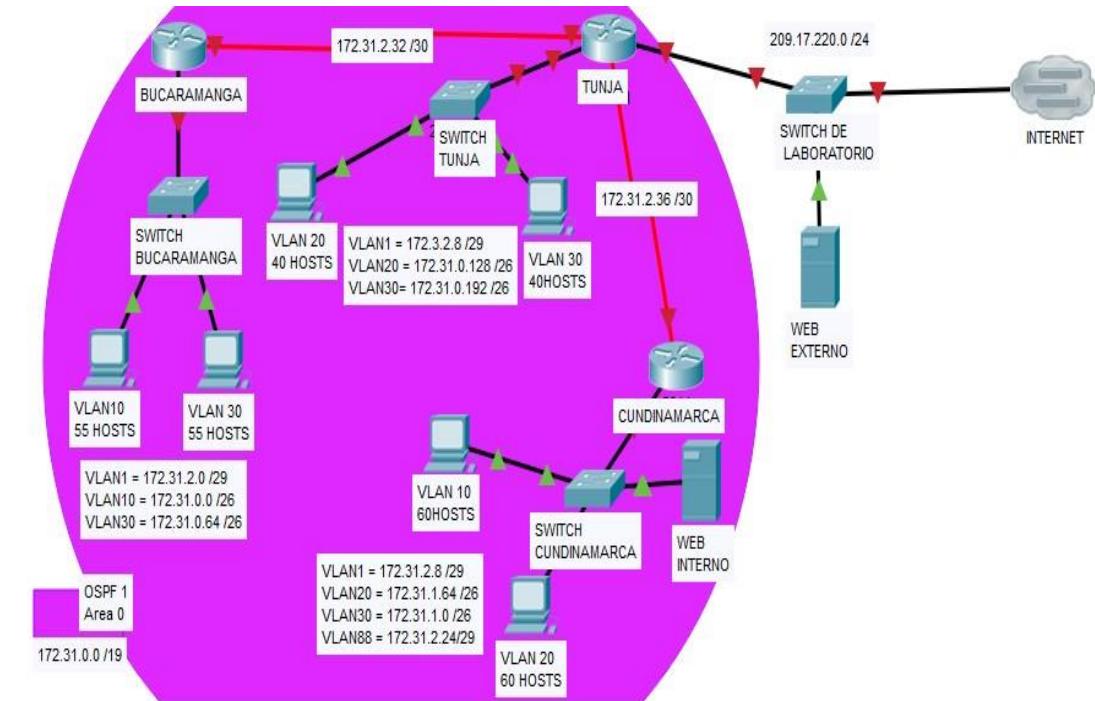

Figura 7 Escenario 2

Desarrollo

Los siguientes son los requerimientos necesarios:

1. Todos los Routers deberán tener los siguiente:
 - Configuración básica.
 - Autenticación local con AAA.
 - Cifrado de contraseñas.
 - Un máximo de internos para acceder al router.
 - Máximo tiempo de acceso al detectar ataques.
 - Establezca un servidor TFTP y almacene todos los archivos necesarios de los Routers.
2. El DHCP deberá proporcionar solo direcciones a los hosts de Bucaramanga y Cundinamarca

3. El web server deberá tener NAT estático y el resto de los equipos de la topología emplearan NAT de sobrecarga (PAT).
4. El enrutamiento deberá tener autenticación.
5. Listas de control de acceso:
 - Los hosts de VLAN 20 en Cundinamarca no acceden a internet, solo a la red interna de Tunja.
 - Los hosts de VLAN 10 en Cundinamarca si acceden a internet y no a la red interna de Tunja.
 - Los hosts de VLAN 30 en Tunja solo acceden a servidores web y ftp de internet.
 - Los hosts de VLAN 20 en Tunja solo acceden a la VLAN 20 de Cundinamarca y VLAN 10 de Bucaramanga.
 - Los hosts de VLAN 30 de Bucaramanga acceden a internet y a cualquier equipo de VLAN 10.
 - Los hosts de VLAN 10 en Bucaramanga acceden a la red de Cundinamarca (VLAN 20) y Tunja (VLAN 20), no internet.
 - Los hosts de una VLAN no pueden acceder a los de otra VLAN en una ciudad.
 - Solo los hosts de las VLAN administrativas y de la VLAN de servidores tienen acceso a los routers e internet.
6. VLSM: utilizar la dirección 172.31.0.0 /18 para el direccionamiento.

Aspectos a tener en cuenta

- Habilitar VLAN en cada switch y permitir su enrutamiento.
- Enrutamiento OSPF con autenticación en cada router.
- Servicio DHCP en el router Tunja, mediante el helper address, para los Routers Bucaramanga y Cundinamarca.
- Configuración de NAT estático y de sobrecarga.
- Establecer una lista de control de acceso de acuerdo con los criterios señalados.
- Habilitar las opciones en puerto consola y terminal virtual

DHCP proporciona direcciones a los hosts de tunja y Cundinamarca

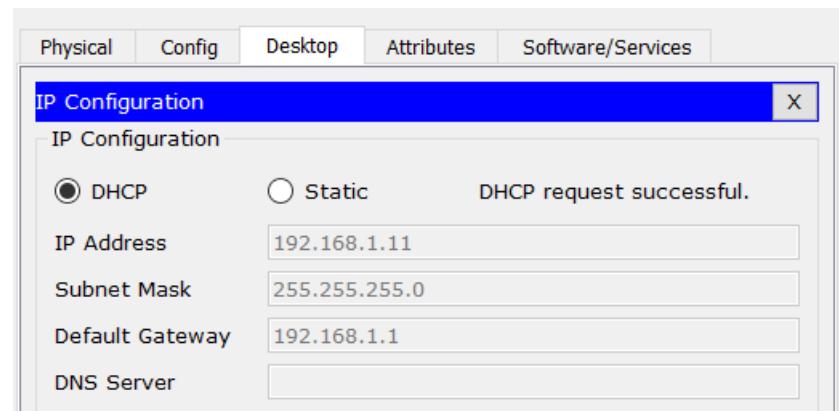

Figura 9 DHCP Tunja

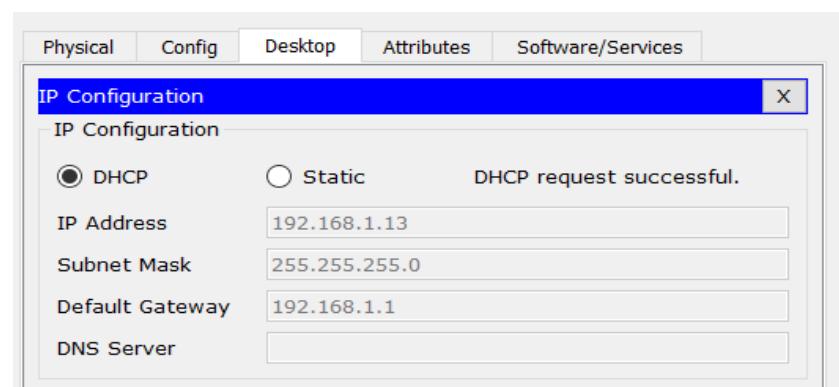

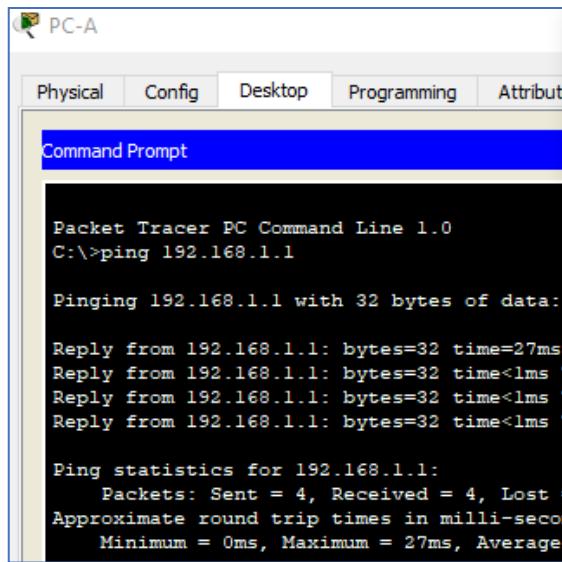

Figura 10 DHCP Cundinamarca

Verificación y respaldo

Se realizan verificaciones para conectividad y seguridad:

PC-A

Physical Config Desktop Programming Attribute

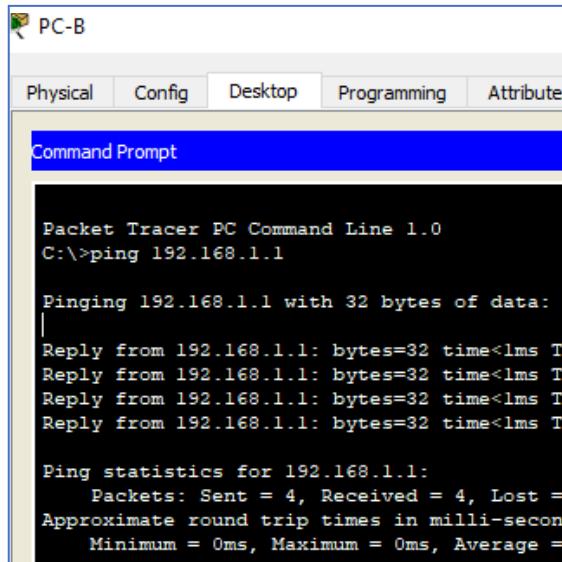

Command Prompt

```
Packet Tracer PC Command Line 1.0
C:\>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time=27ms
Reply from 192.168.1.1: bytes=32 time<1ms
Reply from 192.168.1.1: bytes=32 time<1ms
Reply from 192.168.1.1: bytes=32 time<1ms

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost =
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 27ms, Average =
```

PC-B

Physical Config Desktop Programming Attribute

Command Prompt

```
Packet Tracer PC Command Line 1.0
C:\>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:
| |
Reply from 192.168.1.1: bytes=32 time<1ms T

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost =
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 0ms, Average =
```

Figura 11 Verificación y respaldo

CONCLUSIONES

En el desarrollo de los escenarios 1 y 2 de nuestra actividad se pudieron demostrar los conocimientos del diplomado de profundización CISCO, aplicando la herramienta de simulación packet tracer, protocolos de enrutamiento EIGRP, topologías, modelos OSI, NAT, VLAN etc.

DHCP es un protocolo diseñado principalmente para ahorrar tiempo gestionando direcciones IP en una red grande. muchos sistemas operativos incluyen este servicio precisamente por sus beneficios y su gran importancia.

Comprender todos los beneficios y mecanismos que se implementan en una red y commandos al configurarla y tener la mejor optimizacion
