AGRADECIMIENTOS

Le agradezco a todas las personas que interviene en este proyecto, mi familia que me inspira a seguir adelante, la gran ayuda brindada por todos los tutores y me acompañaron en la carrera que con gran esfuerzo cumplimos a cabalidad, que el objetivo principal entre nosotros era brindarnos ayuda y conocimiento en el área en las cuales tuvimos dificultades.

Inmensas gracias le quiero dar a mi esposa, la cual me apoyo cada día en este largo proceso y que con su amor me fortalecía día, tras día, a mis padres les dedico este logro de mi vida y espero los haga sentir muy orgullosos.

Muchas Gracias, por ser parte del proceso.

GLOSARIO

ASN: *Autonomous System Number*, se le demuestra al grupo de red que es gestionado por algún operador de red por ruteo externo.

BGP: *Border Gateway Protocol*, utilizado para conectar distintos sistemas autónomos principalmente con el canal de internet.

DHCP: *Dynamic Host Configuration Protocol*, funciona en el modelo cliente/servidor y proporciona automáticamente direcciones IP y otra información relacionada como la máscara y el Gateway.

HSRP: *Host Standby Routing Protocol*, asigna a un grupo de redundancia un router activo, otro standby y los demás en estado listen, donde el activo tendrá la IP virtual.

ISP: *Internet Service Provider*, término que identifica las compañías que proveen acceso a internet.

LACP: *Link Aggregation Control Protocol*, característico de la capa 2 une puertos físicos de la red en un único puerto lógico de gran ancho de banda, y crea redundancias.

RESUMEN

A continuación se desarrolla este documento, enfocado a las habilidades prácticas del curso, proyectándose como opción de grado en la carrera de ingeniería en telecomunicaciones ,se desarrollan las habilidades prácticas CCNP en los entornos o escenarios según la guía de actividades, se muestra la simulación en GNS3 manejando las herramientas e imágenes IOS de los elementos de CISCO, realizar las configuraciones de diferentes equipos como switches, routers, pc, de esta forma se mide las capacidades, cualidades y conocimientos de los estudiantes en la ingeniería de telecomunicaciones. Se configuran los protocolos de comunicación, enrutamientos, redes necesarias y todos los equipos de comunicación

Palabras clave: Enrutamiento, Redes, CISCO, CCNP, Comunicación, GNS3, IOS.

ABSTRACT

This document is developed below, focused on the practical skills of the course, projecting itself as a degree option in the telecommunications engineering career, CCNP practical skills are developed in the environments or scenarios according to the activity guide, the simulation is shown in GNS3 managing the IOS tools and images of the CISCO elements, making the configurations of different equipment such as switches, routers, PC, in this way the capacities, qualities and knowledge of the students in telecommunications engineering are measured. Communication protocols, routing, necessary networks and all communication equipment are configured

Key words: Routing, Networks, CISCO, CCNP, Switching, GNS3, IOS

INTRODUCCIÓN

En el desarrollo de este trabajo se relaciona las telecomunicaciones dependiendo de la guía de actividades propuestas en el curso, como ingeniero de telecomunicaciones es de gran importancia facilitar el proceso de las telecomunicaciones, el aprendizaje del día a día de este medio, mostrar las mejoras y los nuevos medios tecnológicos que van saliendo, como es la interacción entre los equipos de comunicación, personas, empresas y los medios remotos de operar estos elementos.

Como ingeniero en Telecomunicaciones se aplicará el conocimiento de conexión y configuración de los equipos de comunicaciones, con esto se desarrolla los ejercicios den GNS3, Cisco Packet Tracer, etc. en este escenario se muestra, 3 router, 3 switches y 4 PCs, haciendo la simulación respectiva del mismo, direccionamiento en los dispositivos IPv6, IPv4 Swiches, utilizado RSTP Rapid y enlaces LACP.

ESCENARIO

PARTE 1: CONSTRUIR LA RED Y CONFIGURAR LOS PARÁMETROS BÁSICOS DE LOS DISPOSITIVOS Y EL DIRECCIONAMIENTO DE LAS INTERFACES

Paso 1: Cablear la red como se muestra en la topología.

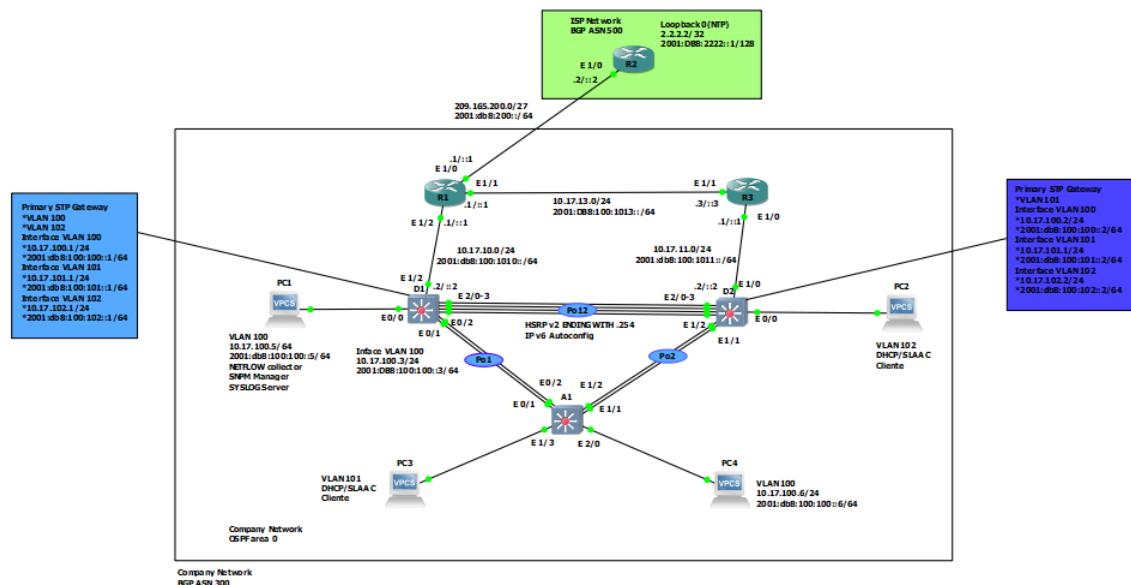

Figura 1. Montaje del escenario propuesto.

TABLA DE DIRECCIONAMIENTO

Tabla 1. Direccionamiento IP

Paso 2: Configurar los parámetros básicos para cada dispositivo

Se procede a configurar los parámetros básicos de los dispositivos como los nombres, textos de banner para cada equipo, específicamente las IP de cada interfaz tanto en IPV4 como en IPV6 de cada uno de los router, en el caso de los switches la creación de las VLAN con sus nombres, las direcciones IP, y se crea un pool DHCP con sus respectivas exclusiones.

Router 1:

```
hostname R1
ipv6 unicast-routing
no ip domain lookup
banner motd # R1, ENCOR Skills Assessment#
line con 0
exec-timeout 0 0

Figura 2. Configuración de IP en los PC

PARTE 2: CONFIGURAR LA CAPA 2 DE LA RED Y EL SOPORTE DE HOST

Paso 1: Configurar las interfaces troncales

Switch D1:

```
interface range e2/0 - 3, e0/1 - 2  
switchport trunk encapsulation dot1q  
switchport mode trunk
```

Switch D2:

```
interface range e2/0 - 3, e1/1 - 2  
switchport trunk encapsulation dot1q  
switchport mode trunk  
exit
```

Switch A1:

```
interface range e0/1 – 2  
switchport trunk encapsulation dot1q  
switchport mode trunk
```

Paso 2: Configurar la VLAN 99 como nativa

Switch D1:

```
interface range e2/0 - 3, e0/1 – 2  
switchport trunk native vlan 999
```

Switch D2:

```
interface range e2/0 - 3, e1/1 – 2
```

switchport trunk native vlan 999

Switch A1:

interface range e0/1 – 2

switchport trunk native vlan 999

spanning-tree portfast edge
spanning-tree portfast edge
A1#
```

Figura 4. Verificación de spanning-tree

Paso 5: crear los LACP.

Switch D1:

```
interface range e2/0-3
channel-protocol lacp
channel-group 12 mode active
Creating a port-channel interface Port-channel 12
exit
interfac port-channel 12
switchport trunk encapsulation dot1q
switchport mode trunk
switchport trunk native vlan 999
switchport trunk allowed vlan 100-102
exit
interface range e0/1-2
channel-protocol lacp
channel-group 1 mode active
Creating a port-channel interface Port-channel 1
exit
interfac port-channel 1
switchport trunk encapsulation dot1q
switchport mode trunk
switchport trunk native vlan 999
switchport trunk allowed vlan 100-102
exit
```

Switch D2:

```
interface range e2/0-3
channel-protocol lacp
channel-group 12 mode active
Creating a port-channel interface Port-channel 12
```

```
exit
interfac port-channel 12
switchport trunk encapsulation dot1q
switchport mode trunk
switchport trunk native vlan 999
switchport trunk allowed vlan 100-102
exit
interface range e1/1-2
channel-protocol lacp
channel-group 2 mode active
Creating a port-channel interface Port-channel 2
exit
interfac port-channel 2
switchport trunk encapsulation dot1q
switchport mode trunk
switchport trunk native vlan 999
switchport trunk allowed vlan 100-102
exit
```

Switch A1:

```
interface range e0/1-2
channel-protocol lacp
channel-group 1 mode active
Creating a port-channel interface Port-channel 1
exit
interfac port-channel 1
switchport trunk native vlan 999
switchport trunk allowed vlan 100-102
switchport mode trunk
exit
interface range e1/1-2
```

```
channel-protocol lacp
channel-group 2 mode passive
Creating a port-channel interface Port-channel 2
exit
interfac port-channel 2
switchport mode trunk
switchport trunk native vlan 999
switchport trunk allowed vlan 100-102
exit
```

Paso 6: Configurar los puertos de acceso a los PC.

Switch D1:

```
interface e0/0
switchport mode access
switchport access vlan 100
```

Switch D2:

```
interface e0/0
switchport mode access
switchport access vlan 102
```

Switch A1:

```
interface e1/3
switchport mode access
switchport access vlan 101
exit
interface e2/0
switchport mode access
switchport access vlan 100
exit
```

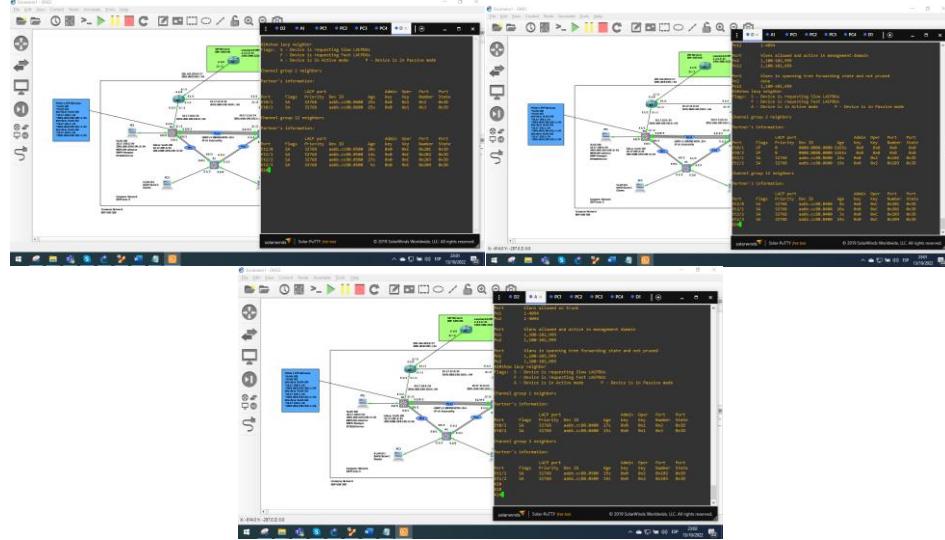

Figura 5. Verificación del LACP

Paso 7: Verificar los PC en DHCP

```

PC3>

```

solarwinds | Solar-PuTTY free tool © 2019 SolarWinds Worldwide, LLC. All rights reserved. 23:06 13/10/2022 [22]

PC4 should successfully ping:

- D1: 10.53.100.1
- D2: 10.53.100.2
- PC1: 10.53.100.5

The screenshot shows a Solar-PuTTY terminal window titled "PC4". It displays three separate ping commands and their responses:

- Ping to 10.17.100.1:
PC4> ping 10.17.100.1
3/3
...
84 bytes from 10.17.100.1 icmp_seq=1 ttl=255 time=0.671 ms
84 bytes from 10.17.100.1 icmp_seq=2 ttl=255 time=1.443 ms
84 bytes from 10.17.100.1 icmp_seq=3 ttl=255 time=1.613 ms
84 bytes from 10.17.100.1 icmp_seq=4 ttl=255 time=4.695 ms
84 bytes from 10.17.100.1 icmp_seq=5 ttl=255 time=1.364 ms
- Ping to 10.17.100.2:
PC4> ping 10.17.100.2
2/2
...
84 bytes from 10.17.100.2 icmp_seq=1 ttl=255 time=3.606 ms
84 bytes from 10.17.100.2 icmp_seq=2 ttl=255 time=1.185 ms
84 bytes from 10.17.100.2 icmp_seq=3 ttl=255 time=15.638 ms
84 bytes from 10.17.100.2 icmp_seq=4 ttl=255 time=1.246 ms
84 bytes from 10.17.100.2 icmp_seq=5 ttl=255 time=1.382 ms
- Ping to 10.17.100.5:
PC4> ping 10.17.100.5
3/3
...
84 bytes from 10.17.100.5 icmp_seq=1 ttl=64 time=1.938 ms
84 bytes from 10.17.100.5 icmp_seq=2 ttl=64 time=0.795 ms
84 bytes from 10.17.100.5 icmp_seq=3 ttl=64 time=1.028 ms
84 bytes from 10.17.100.5 icmp_seq=4 ttl=64 time=2.299 ms
84 bytes from 10.17.100.5 icmp_seq=5 ttl=64 time=1.061 ms

The terminal window includes the Solarwinds logo and "Solar-PuTTY free tool" text at the bottom left, and the Solarwinds watermark "© 2019 SolarWinds Worldwide, LLC. All rights reserved." at the bottom right. The status bar at the bottom shows the date and time: 23:08 13/10/2022.

Figura 7. Ping entre los dispositivos de la red local

PART 3 CONFIGURE ROUTING PROTOCOLS

Paso 1 Configuración OSPFv2

Router R1:

```
router ospf 4
router-id 0.0.4.1
network 10.17.10.0 0.0.0.255 area 0
network 10.17.13.0 0.0.0.255 area 0
exit
ip route 0.0.0.0 0.0.0.0 e1/0
router ospf 4
default-information originate
```

Router R3:

```
router ospf 4
router-id 0.0.4.3
network 10.17.11.0 0.0.0.255 area 0
network 10.17.13.0 0.0.0.255 area 0
```

Switch D1:

```
router ospf 4
router-id 0.0.4.131
network 10.17.10.0 0.0.0.255 area 0
network 10.17.100.0 0.0.0.255 area 0
network 10.17.101.0 0.0.0.255 area 0
network 10.17.102.0 0.0.0.255 area 0
passive-interface default
no passive-interface e1/2
```

Switch D2:

```
router ospf 4
router-id 0.0.4.132
network 10.17.11.0 0.0.0.255 area 0
network 10.17.100.0 0.0.0.255 area 0
network 10.17.101.0 0.0.0.255 area 0
network 10.17.102.0 0.0.0.255 area 0
passive-interface default
no passive-interface e1/0
```

Paso 2: Configuración de OSPFv3**Router R1:**

```
ipv6 router ospf 6
router-id 0.0.6.1
exit
interface e1/1
ipv6 ospf 6 area 0
interface e1/2
ipv6 ospf 6 area 0
exit
ipv6 router ospf 6
default-information originate
```

Router R3:

```
ipv6 router ospf 6
router-id 0.0.6.3
exit
interface e1/0
ipv6 ospf 6 area 0
interface e1/1
ipv6 ospf 6 area 0
```

Switch D1:

```
ipv6 router ospf 6
router-id 0.0.6.131
interface e1/2
ipv6 ospf 6 area 0
exit
interface vlan 100
ipv6 ospf 6 area 0
interface vlan 101
ipv6 ospf 6 area 0
interface vlan 102
ipv6 ospf 6 area 0
```

Switch D2:

```
ipv6 router ospf 6
router-id 0.0.6.132
interface e1/0
ipv6 ospf 6 area 0
interface vlan 100
ipv6 ospf 6 area 0
interface vlan 101
ipv6 ospf 6 area 0
interface vlan 102
ipv6 ospf 6 area 0
```

Paso 3: Configuración MP-BGP en la red ISP R2.**Router R2:**

```
ip route 0.0.0.0 0.0.0.0 loopback 0
ipv6 route ::/0 loopback 0
router bgp 500
```

```
bgp router-id 2.2.2.2
no bgp default ipv4-unicast
neighbor 209.165.200.225 remote-as 300
neighbor 2001:db8:200::1 remote-as 300
address-family ipv4 unicast
neighbor 209.165.200.225 activate
network 2.2.2.2 mask 255.255.255.255
network 0.0.0.0 mask 0.0.0.0
exit
address-family ipv6 unicast
neighbor 2001:db8:200::1 activate
network 2001:db8:2222::1/128
network ::/0
exit
```

Paso 4: Configuración MP-BGP en la red ISP R1

Router R1:

```
ip route 10.0.0.0 255.0.0.0 null 0
ipv6 route 2001:db8:100::/48 null 0
router bgp 300
bgp router-id 1.1.1.1
no bgp default ipv4-unicast
neighbor 209.165.200.226 remote-as 500
neighbor 2001:db8:200::2 remote-as 500
address-family ipv4 unicast
neighbor 209.165.200.226 activate
network 10.0.0.0 mask 255.0.0.0
exit
address-family ipv6 unicast
neighbor 2001:db8:200::2 activate
network 2001:db8:100::/48
```

Paso 5: Verificación del MP-BGP con Ping

Ping D1 y D2 hacia Loopback 0

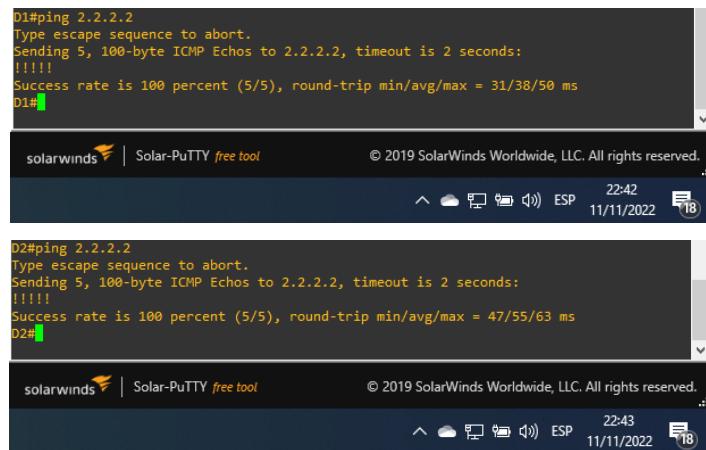

Figura 17. Verificación de Ping D1 y D2 hacia Loopback 0

PART 4 CONFIGURE FIRST HOP REDUNDANCY

Paso 1: En D1, Cree IP SLAs que prueben la accesibilidad de la interfaz R1 G1/0

Switch D1:

```
ip sla 4
icmp-echo 10.17.10.1 source-ip 10.17.10.2
frequency 5
exit
ip sla schedule 4 start-time now life forever
track 4 ip sla 4 reachability
delay up 10 down 15
exit
ip sla 6
icmp-echo 2001:db8:100:1010::1
frequency 5
exit
ip sla schedule 6 start-time now life forever
track 6 ip sla 6 reachability
delay up 10 down 15
exit
```

Paso 2: En D2, cree IP SLAs que prueben la accesibilidad de la interfaz R3 G1/0.

Switch D2:

```
ip sla 4
icmp-echo 10.17.11.1 source-interface e1/0
frequency 5
exit
```

```
ip sla schedule 4 start-time now life forever
track 4 ip sla 4 reachability
delay up 10 down 15
exit
ip sla 6
icmp-echo 2001:db8:100:1011::1
frequency 5
exit
ip sla schedule 6 start-time now life forever
track 6 ip sla 6 reachability
delay up 10 down 15
exit
```

Paso 3: En D1 configure HSRPv2.

Switch D1:

```
interface vlan 100
standby version 2
standby 104 ip 10.17.100.254
standby 104 priority 150
standby 104 preempt
standby 104 track 4 decrement 60
standby 106 ipv6 autoconfig
standby 106 priority 150
standby 106 preempt
standby 106 track 6 decrement 60
exit
interface vlan 101
standby version 2
standby 114 ip 10.17.101.254
standby 114 preempt
```

```
standby 114 track 4 decrement 60
standby 116 ipv6 autoconfig
standby 116 preempt
standby 116 track 6 decrement 60
exit
interface vlan 102
standby version 2
standby 124 ip 10.17.102.254
standby 124 priority 150
standby 124 preempt
standby 124 track 4 decrement 60
standby 126 ipv6 autoconfig
standby 126 priority 150
standby 126 preempt
standby 126 track 6 decrement 60
exit
```

Paso 4: En D2 configure HSRPv2.

Switch D2:

```
interface vlan 100
standby version 2
standby 104 ip 10.17.100.254
standby 104 preempt
standby 104 track 4 decrement 60
standby 106 ipv6 autoconfig
standby 106 preempt
standby 106 track 6 decrement 60
exit
interface vlan 101
standby version 2
```

```

standby 114 ip 10.17.101.254
standby 114 priority 150
standby 114 preempt
standby 114 track 4 decrement 60
standby 116 ipv6 autoconfig
standby 116 priority 150
standby 116 preempt
standby 116 track 6 decrement 60
exit
interface vlan 102
standby version 2
standby 124 ip 10.17.102.254
standby 124 preempt
standby 124 track 4 decrement 60
standby 126 ipv6 autoconfig
standby 126 preempt
standby 126 track 6 decrement 60
exit

```

EVIDENCIAS DE CONFIGURACION PARTE 4

Issue the show run | section ip sla command on D1; output should appear as below. Verify task 4.1 and bullet 3 of task 4.3 for Switch D1.

Switch D1:

```

D1#show run | section ip sla
track 4 ip sla 4 reachability
delay down 15 up 10
track 6 ip sla 6 reachability
delay down 15 up 10
ip sla 4
  icmp-echo 10.17.10.1 source-ip 10.17.10.2
  frequency 5
  ip sla schedule 4 life forever start-time now
ip sla 6
  icmp-echo 2001:DB8:100:1010::1
  frequency 5
  ip sla schedule 6 life forever start-time now
D1#

```

The screenshot shows the Solar-PuTTY terminal window with the command output. The SolarWinds logo is visible at the bottom left, and the status bar at the bottom right shows the time as 19:32 and the date as 13/11/2022.

Figura 18. Verificación de show run | section ip sla

Issue the show standby brief command on D1; output should appear as below. Verify task 4.3.

Switch D1:

```
D1#show standby brief
      P indicates configured to preempt.

Interface  Grp Prt P State Active   Standby          Virtual IP

Figura 21. Verificación de Verificación del Standby

Enlace de Handle:

CONCLUSIONES

Se puede evidenciar que los protocolos de enrutamiento utilizados en el escenario OSPF y BGP son los más comunes que se pueden encontrar en un entorno real, muchas organizaciones utilizan el OSPF para enrutar como protocolo interno porque permite que se conozca toda la red a través de la tabla de enrutamiento de cada router evitando loops, también actualizan automáticamente las tables con cualquier cambio en la topología.

El BGP para interconectar sistemas autónomos porque es normal que no todas las organizaciones utilicen el mismo protocolo de enrutamiento interno como lo es el ISP adicional sobre la importancia de las redundancias a nivel de capa 3, esta se utilizan para evitar que los dispositivos locales queden fuera de red por algún fallo en el Gateway, utilizando SLAs para monitorear continuamente las interfaces del Gateway y el protocolo HSRP para tener un router activo con la interfaz virtual y el otro de reserva.

Se puede notar como se utiliza la combinación de técnicas y protocolos Como: Redundancia de enlaces, Spanning tree y LACP para sacar el mejor provecho a la conexión en capa 2; donde el primero permite dar tolerancia a las fallas y protección contra la inoperatividad, el segundo asegura que solo exista una ruta lógica y evita bucles en estas redundancias, finalmente el LACP combina las redundancias físicas en un solo enlace lógico de alta velocidad; una combinación poderosa que se debe realizar con cuidado y en orden para no crear errores premeditados en la red.
